In 1915 the American Federation of Labor selected the location for the building that was to be the home of the labor movement in America. "Upon the site when it was purchased was standing a finely built old mansion with a slave pen in the rear... On that site in which slave owners and slaves dwelt, the temple of Labor, the A.F. of L. office building will be erected." The firm of Milburn, Heister & Company was selected to draw up plans for the new building, to be located on the corner of 9th Street and Massachusetts Avenue, NW--then a busy intersection in the path of Washington's expanding business district-and ground was broken late in the year.

In some respects the building is patterned after architect Louis Sullivan's ideas about tall buildings, i.e., that they should have a base, a shaft, and a cornice, each clearly delineated. The base, or first floor, of the A.F.L. building is of limestone, and the central entrance features a stripped-down classical motif. The shaft is of tan brick, its verticality emphasized by the banding of limestone which frames the windows. Limestone spandrels further emphasize the building's seven-story height. A heavy modillion cornice caps this building, a feature rather typical of office construction during the early years of this century.

The United Association of Journeymen and Apprentices of the Plumbing and Pipe Fitting Industry purchased the building in 1955, and remodelled and modernized the interior. The exterior features of the building remain much the same, however, with only a few alterations. The windows have been replaced to allow for air-conditioning, and the entranceway has been somewhat streamlined. Globe lamps, which once flanked the doorway, have been removed, as has the cornerstone bearing this inscription:

> American Federation of Labor Founded 1881 This edifice erected for service in the cause of Labor--Justice--Freedom--Humanity 1915-1916.

On July 4, 1916, the American Federation of Labor dedicated its new international headquarters, "thus marking the achievement of a purpose that has been a dream of wage-earners since the organization of the movement."¹ President Woodrow Wilson delivered the chief address, declaring: "I am not here to adorn the occasion, but...to express my very deep interest in it and to show how near it lies to my own heart that the legitimate objects of the great labor movement should be achieved." ²

The new "national labor temple," as it was often called, was constructed during 1915 and 1916 on the northwest corner of 9th Street and Massachusetts Avenue, NW. This imposing seven-story brick and limestone building served to symbolize the Federation's growth from, in the words of its founder, Samuel Gompers, "a weakling into the strongest, best organized labor movement of all the world."³ As the physical symbol of an organization which, in 1916, embraced some two and one-half million trade-unionists--a majority of the organized workers in America--the building evokes the history and activities of the Federation which it housed for 40 years. In its drive for higher wages and better working conditions, the A.F.L. became the major spokesman for organized workers in the United States, and so it remains--now merged with its one-time rival, the C.I.O.

7. Description: (1)

American Federation of Labor Building

This building, which housed the A.F.L. for 40 years, maintains a quiet dignity even today. The following observation, though made in 1946, has not lost its validity: "the A.F.L. building remains visually and otherwise, an asset to the city.... There is a hint of streamlining about the building which blends well with the new and the old here."²

Edmund G. Monk, "Labor's High Command Seated in Capital," <u>Sunday Star</u> (Washington), September 1, 1946, p. B-2.

8. Significance:

(2) American Federation of Labor Building

A reporter present at the dedication of its large new office building at 9th Street and Massachusetts Avenue called the occasion one "toward which the wage-earners have looked for years, when there might be in this country a national labor temple which sould be the center of a movement to protect and bring betterment into the lives of the workers."⁵

After 1924, the Federation was confronted by attacks from both right and left, and suffered a precipitous decline in membership. Many employers attempted to eliminate the influence of labor unions from individual plants and even entire industries; the giant steel companies, for example, simply refused to bargain collectively with any union. On the left, the A.F.L. faced criticism from dissidents for its traditional conservative tactics, as well as from proponents of a national labor party. Once Franklin Roosevelt took office in 1933, however, a dramatic change took place. The National Industrial Recovery Act, which guaranteed labor "the right to organize and bargain collectively through representatives of their own choosing," greatly stimulated workers to join the unions and to fight for their right to security from economic deprivation in time of sickness and in old age.

During this same period, the A.F.L. leadership faced an internal crisis, in the form of attempts by workers in the mass production industries to unionize. The majority of these workers were semi-skilled operatives, and sought to establish industrial unions--in direct opposition to the traditional craft union policies of the Federation. The A.F.L. defeated a resolution to permit the mass production industries to organize on an industrial, or "vertical" basis, in 1935, but eventually recognized the fact that unions in manufacturing would have to be allowed to function as <u>industrial</u> unions wherever the needs of workers made such a structuring necessary. After prolonged negotiations, the American Federation of Labor merged with the Congress of Industrial Organizations on February 9, 1955. The new association, known as the A.F.L.-C.I.O., needed more room than the building at 9th and Massachusetts could provide, and subsequently moved to larger headquarters in the 800 block of 16th Street, NW. By 1970, membership had reached almost 16,000,000.

of the A.F.L. in American labor history can scarcely be overestimated. Completion of a "labor temple" indeed signaled that the labor movement had finally come into its own. In the words of Samuel Gompers:

> The completion of the A.F. of L. office building in Washington in 1916 marked a period of achievement in the history of the labor movement that represented constructive progress, dependability, and sustained activity.... It was a proud moment for me when I was privileged to escort the Chief Magistrate of the United States to speak to our labor men from all over the country to dedicate our new home....6

The American Federation of Labor Building was--and remains--a symbol of labor's victory.
