X See continuation sheet.

Verbal Boundary Description: See continuation sheet.

The boundary is shown on the accompanying map, scale 1"=200', traced from Thompson Assessor Map 61.

Boundary Justification: See continuation sheet.

The boundary was chosen to include all contiguous properties historically associated with the mill. The boundary generally follows property lines, except where necessary to cut across so as to exclude excessive back acreage.

Description	North Grosvenordale Mill Historic District Thompson, Windham County, CT	7-3
-------------	---	-----

accommodations for unmarried immigrant men. All of the men were referred to as Greeks, but many were from Turkey, Albania, or Rumania.

Finally, the district includes several 2-story houses on Riverside Drive erected by the mill company about 1895. These simple Victorian dwellings have turned posts, jigsaw brackets, and other decorative porch detail (Photograph 15). At about the same time, the mill built a row of 1 1/2-story one and two-family houses, originally with similar porch details, east of Greek Village (Photograph 16).

The great majority of the buildings in the district retain their original form. Replacement of original clapboard exteriors with modern siding materials is the chief alteration evident in the district, but even where this has occurred, enough remains of entry and window trim (Photographs 12 and 14) to indicate the buildings' original detailing, and most of the houses have six-over-six sash that represents either original windows or replacement in kind. There are very few noncontributing buildings to interrupt the concentration of historic buildings within the district. The most serious deviations from the village's historic appearance are the loss of three large tenements south of the mill, on Main Street, and the destruction by fire in the late 1970s of the agent's residence, a large house that stood north of the intersection of Buckley Hill Road and Riverside Drive.

The boundary of the district was delineated so as to include all contiguous formerly mill-related properties. The boundary generally follows property lines; however, some property lines were cut so as to exclude excessive open land or buildings that were not connected to the North Grosvenordale Mill. East of the district, on Buckley Hill Road, and south of the district, on Main Street, are other parts of the village of North Grosvenordale that were not part of the mill-owned complex.

INVENTORY OF RESOURCES

In the Inventory that follows, contributing and noncontributing resources are indicated by counts in the C and NC columns. For the descriptions, it was not always possible to distinguish aluminum from vinyl siding, so both materials are indicated with the descriptor, "sided." "Composition" shingles or clapboards refer to siding made from wood-fiber, asbestos, or similar manufactured materials. Garages and sheds are counted as contributing if they appear to date from the period of significance; many garages appear to have been remodeled from old barns or sheds.

Significance	North Grosvenordale Mill Historic District Thompson, Windham County, CT	8-1
--------------	---	-----

Summary

The historic resources included in the North Grosvenordale Mill Historic District are significant because they illustrate the tremendous impact of textile manufacturing in the development of eastern Connecticut (Criterion A) and because they embody the distinctive architectural and spatial characteristics of a 19th-century mill town (Criterion C). In 1864, William Grosvenor, a Rhode Island physician and investor, purchased two small textile mills and associated water privileges along the French River in the Town of Thompson, Connecticut. Grosvenor built large new mills at each site, starting in 1868 in the village of Masonville, which he renamed Grosvenordale. Shortly thereafter, he began an even larger mill in what had been the village of Fisherville, renamed North Grosvenordale. Completed in 1872, Mill No. 2 or North Grosvenordale Mill specialized in high-quality cottons such as cambrics and high-count sheetings. It became one of the largest, most productive, and longest-lasting textile mills in Connecticut. The economic success of the mill created a stable economic base and allowed the village of North Grosvenordale to grow and prosper.

Historic Context

The swift-moving streams of eastern Connecticut were highly suitable for the waterpowered textile-manufacturing technology that had been developed in Rhode Island at the end of the 18th century, and by the time of the War of 1812 there were numerous small mills throughout the region. Most were started by some combination of local well-to-do citizens and Rhode Island entrepreneurs. Almost without exception, these early ventures remained small and relatively insignificant until the middle of the 19th century, when a fresh infusion of outside capital, mostly from Providence, allowed a number of mills to expand to new levels.

The North Grosvenordale Mill is an example of such a development. It was far larger than the Fisherville mill that had preceded it, running 65,000 spindles and employing 850 people in 1882. The stone dam and canal that created the waterpower (one of few major textile-mill dams to survive intact in Connecticut) represent engineering works of a scale previously unprecedented in the region. More than 11 feet higher than the old dam, the new one allowed for 400 horsepower initially,

Architectural Significance

The huge mill, the nearby tracts of mill-related housing, and the large company store make North Grosvenordale an exceptionally good example of the mill village, a settlement pattern found throughout eastern Connecticut. The rows of nearly identical employee houses that surround the mill re-create the sense of order and company control that historically characterized such villages. The paternalistic presence of the mill is further recalled by the store and park, indications that the Grosvenor-Dale Company provided not only work and shelter but also other necessities of life and even opportunities for recreation. North Grosvenordale departs from other large mill villages in that its houses are arranged in long rows rather than in squares or on a grid. In this respect, North Grosvenordale was a scaling-up of the practice, common with smaller textile mills, of simply building the housing wherever it would fit, rather than using some pre-conceived village plan. With over 60 mill houses still standing, North Grosvenordale represents one of the largest mill villages in Connecticut.

The houses are archetypal company-built dwellings: plain in form, with symmetrical duplex or other modular plans. As was typical, most of the houses have only the simplest architectural embellishment, in this case, brackets below the entry cornices. In contrast, the mill itself and the company store, the two largest buildings in the district, are also the most elaborately detailed, symbolizing their central importance. The store's mansard roof, raised window hoodmolds, and intricate porch detail typify the then-popular Second Empire style of architecture, while the mill's arched corbelling and highly embellished towers reflect a Romanesque influence suggestive of the churches and castles of the early Middle Ages.

The mill is also notable as a representative example of the period's textile-mill engineering. Its long and narrow proportions and multi-story height provided efficient power transmission from the turbines located in the wheelpit of the ell, as well as maximizing natural light. The towers accommodated stairways (separated from the mill itself for fire-safety reasons), cisterns to pressurize a fire-hose system, and belfries for sounding the call to work. Its low-pitched hip roof represents a half-way point in an evolution toward the flat-roofed mills of the early 20th-century; insurance interests declared attics to be fire hazards, and mills had little use for such poorly-lit space anyway. The architectural embellishment of the mill identifies

--------------	---	-----

its 1870s origins: by the end of the 19th century, a much more utilitarian appearance prevailed among the region's textile mills. The mill was designed by F. P. Sheldon, a Providence engineering firm that designed many of the largest textile mills in Rhode Island and eastern Connecticut, among them the Ponemah Mills in Taftville (Norwich), Connecticut.
