DESCRIBE THE PE	RESENT AND ORI	GINAL (if kne	own) PHYSICA	L APPEA	RANCE			

The Customs House is a simple rectangular building measuring fifty-six feet (King Street facade) by eighty (Sixth Street). The main floor level is raised on a cut stone base six feet above the King Street level. Due to the sloping contour of the site, the basement floor is above grade on the east. The west front, containing the principal entrance had a slightly projecting portico with engaged flat pilasters supporting a triangular pediment. A double door is centered and windows on either side are trimmed so that they appear to be matching doors. Three windows are centered above the first floor openings. The north and south elevations are identical, composed of five windows evenly spaced windows. The windows on the first floor, except for those on the west elevation, have projected heads supported by shaped brackets. The window sills are square and project slightly from the stuccoed walls. The second floor windows have stucco frames, but the sills project boldly from the walls and are supported by double brackets as each end.

The hipped roof is in the form of a truncated pyramid, the pediment intersecting on the west side. The whole roof is defined by a heavy cornice with deep dentils resting on a moulded stucco bed mould. Four chimneys are centered between the first and second windows and the fourth and fifth on the north and south elevations.

Since the building was completed in 1855, only minor alterations have been undertaken. The first floor was originally appropriated to the offices of the Customs Department. Here were located the Collector's Office, Post Office, Post Master's Room, and a large hall which contained the principal stair and served as an entrance foyer to the Letter Boxes. The Second floor contained the United States Court Room, Judge, Clerk, and Jury Rooms.

In 1869 additional improvements were made to the building which cost approximately \$5,000.00. The Post Office remained in the building until 1897 when it was moved to 9th and Shipley Streets. In 1929 repairs were made to the cornice; and specifications issued February 21, 1930 resulted in the removal of the east iron and granite balcony from over the main entrance which measured 32'-3" by 5'-6" and extended one foot on each side of the projection around the main entrance. The posts supporting the railing were of cast-iron as were the supports for the balcony floor. The railing and the floor were of granite. Removed at the same time were the dutch doors; the area under the new windows were bricked in. In 1968, the building was re-painted its original white color.

About 1800, the collection of Customs was transferred from New Castle, Del. to Wilmington. This duty of the Federal Government was performed in a small rented store on Water Street. It was not until August 31, 1852, that the construction of a New Customs House for Wilmington was authorized by the United States House of Representatives with an enabling appropriation of \$25,000.00. George Read Riddle, the Delaware Representative, sponsored the bill through the House. It was also Riddle who the following year purchased for \$3,500.00 the site of Moore's Carriage Works at Sixth and King Streets.

The proposed designs for Wilmington must have been one of the earliest prepared by Ammi Burnham Young (1798-1874), after his appointment as the Supervising Architect of the Offices of Construction of the Treasury Department. Appointed to this post on September 27, 1852, Young retained this position for nearly ten years during which time nearly seventy Federal buildings were constructed. Captain A.H. Bowman was the engineer in charge of all Federal construction.

A proposal for erecting the Customs House in Wilmington advertised in the Delaware Gazette in June and July of 1853. On August 1st the resulting bids were opened in Washington and the contract awarded to William Graves, Carpenter, of Wilmington, Delaware: this in spite of the fact that his estimate was \$14,000.00 more than had been appropriated. Considerable debate was held on this difference in the House. McCullough & Co. were given the contract for the iron roof, a difficult technique for that day.

Although the iron founding and fabricating business in Delaware was not established until 1826, with the forming of the Phoenix Foundry; by 1860 this had become the second most important industry in the State. McCullough and Co. was organized in 1847 when three Wilmingtonians, Delapaine McDaniel, Jethro McCullough, and E.A. Harvey bought a small iron works at North East, Maryland. In 1853, the year they were awarded the Customs House contract, McCullough and Co. secured some trained men from England. Under the supervision of Mr. E.A. Harvey, they erected a small galvanizing works, which was the start of the manufacture of galvanized sheet iron in the United States. Mr. Harvey further invented a machine for cleaning the previously black sheets. These plated became known as "Harvey's Patent Cleaned" iron. Other Wilmington firms added to the local reputation for finely engineered, prefabricated architectural iron work. Bush and Lobdell construction the trusses for the

train shed of the Philadelphia station of the Philadelphia, Wilmington, and Baltimore Railroad. The Public Ledger and Daily Transcript (Tuesday, May 18, 1852) described its "majestic roof, rising with daring and lofty curve, and spanning with one sweep the entire width of 150 feet from wall to wall." Two of the largest buildings at the Centennial Celebration in Philadelphia in 1876 were fabricated in Wilmington.

Thus the Customs House is of national significance not only because of its design, the recognized talents of its architect, but also for its role in the development of fire proof construction and cast and wrought iron technology. Bowman in a letter sent to several colleges and learned societies, including the British Museum, London stated "The introduction of wrought iron beams and girders in these Edifices, (U.S. Customs Houses then being constructed). instead of groined arches as formerly used, is, I believe, wholly new." (National Archives, Record Group 77, letter 13 December 1856). A similar building by Young in Galveston, Texas has recently been restored and opened to the public with great fanfare.
