United States Department of the Interior
National Park ServiceNational Register of Historic Places
Continuation SheetSection number 7 Page 1**Summary**

The Spring Lake Recreation Area Historic District (Ozark-St. Francis National Forest) is located on the southern bench of Chickalah (pronounced "Cha-key-la") Mountain in central Yell county. The shallow area in which the lake was constructed lies at the convergence of seven (7) intermittent streams as well as a spring. This area was developed by the Works Progress Administration (WPA) as a recreation area in the mid-1930s, though its original structures were designed in the Rustic or Rustic Resort style that was typically the signature of Civilian Conservation Corps construction. The total of twenty-two contributing resources include: two (2) swimming platforms, a bathhouse, two (2) picnic pavilions, a dam, fourteen (14) rock-constructed picnic sites, a stone bridge (YE0061; NR-listed 06/21/90) and the 86-acre lake itself (which counts as a site). There are five (5) concrete picnic sites and a chemical flush toilet which are non-contributing resources.

Elaboration

The Spring Lake Recreation Area Historic District (Ozark-St. Francis National Forest) is located on the southern bench of Chickalah (pronounced "Cha-key-la") Mountain in central Yell county. The shallow area in which the lake was constructed lies at the convergence of seven (7) intermittent streams as well as a spring. This area was developed by the Works Progress Administration (WPA) as a recreation area in the 1930s, though its original structures were designed in the Rustic or Rustic Resort style that was the signature of Civilian Conservation Corps construction in Arkansas and the surrounding region. The total of twenty-two contributing resources include: two (2) swimming platforms, a bathhouse, two (2) picnic pavilions, a dam, fourteen (14) rock-constructed picnic sites, a stone bridge (YE0061; NR-listed 06/21/90) and the lake itself (which counts as a site). There are five (5) concrete picnic sites and a chemical flush toilet which are non-contributing resources.

The dam (YE 0014) is located at the southern end of the lake. It is constructed of native stone in an arc across a natural pass in the south bluff of Chickalah Mountain through which Spring Creek passes. The north side of the dam is a straight drop of forty-five (45) feet from the spillway to the base of the gate aperture for controlling the water level. The top of the dam has a suspended walkway over twelve spillway openings. The walkway is supported by stone pillars which separate the spillways. The walkway is flanked on both sides by balustrade of metal pipes set in two rows, one over the other, which extends the length of the dam some 250 feet. The southern side of the dam is a stately arc which allows the water to drop about 20 feet before being dispersed by a stair system of steps to the base of the dam. At the base of the dam is the

United States Department of the Interior
National Park ServiceNational Register of
Historic PlacesNational Register of Historic Places
Continuation SheetSection number 7 Page 2

other outlet for the gate which reforms the convergence of creeks which make up Spring Creek.

Picnic pavilion #1 (YE 0015) is located 600 feet north and east of the dam in the camping portion of the recreation area. The pavilion is constructed of log columns supporting a gabled, asphalt shingle roof. The structure is flanked on each end by large native stone chimneys which can be used for cooking. The floor surface of the structure is composed of native flagstone. The structure has built-in benches on the south side at the east end and along the length of the north side with the exception of the middle which acts as an entrance. This entrance has flagstone steps by which to enter the structure.

Picnic pavilion #2 (YE 0017) is located in the picnic area near the entrance to the recreation area. This structure is also constructed of log columns supporting a large gabled, asphalt shingle roof. This structure has a log balustrade on all four sides with central entrances on each side. The interior of the structure has a set of built-in benches which follow the balustrade on the sides of the pavilion. The floor of the structure is constructed of flagstone, which also forms the base of the structure. On the interior of the pavilion are two built-in picnic tables of log construction.

The bathhouse facility (YE 0016) is located near the end of the picnic area and between the two pavilions. It is of stone and frame construction and is built in the Rustic style typical of Depression-era public works-designed architecture. It has a native stone base which also forms the lower walls of the structure. Between the stone walls and the roof is a frame section covered with a weatherboard siding. The roof is a large gable on hip covered with asphalt shingles. The front or southern facade of the structure features a one bay central front porch which is set up to serve as a concession area. The porch is supported by two large stone columns set on either edge of a stone balustrade which forms the forward edge of the porch. Along the forward edge of the roof line at the junction of the columns are wood brackets. The porch is covered with a hipped roof which intersects the primary gable at the center of the structure. The structure is divided into two large rooms which serve as men's and women's changing rooms with shower and toilet facilities. Centrally located between the two large rooms is a room designed to serve as a concessionaire's area that also extends into the porch area. Each of the changing rooms has an exterior entrance which flanks the porch area on the southern facade. The windows of the structure feature two hopper style windows, one on top of the other. The grounds surrounding the bathhouse facility are landscaped with stone. On the eastern side of the structure is a stone walkway from a parking area on the ridge above the bathhouse. The stone walkway forms a tight horseshoe in front of the bathhouse with the opening of the horseshoe facing the porch of the bathhouse thus forming a small grassy area the width of the porch. The stone walkway then forms a larger walkway extending southeast of the bathhouse toward the beach area. This walk is tiered with several sets of steps to form two grassy areas before reaching the actual beach

United States Department of the Interior
National Park ServiceNational Register of
Historic PlacesNational Register of Historic Places
Continuation SheetSection number 7 Page 3

area. All of the rock work is done in native stone.

There are two swimming platforms in the swimming area. The western most platform is swimming platform #1 (YE 0068). This platform is of stone and concrete construction and is constructed in two sections. Section 1, or the northern section, is a 46-foot-long concrete deck supported at the end and mid-way by stone piers. Section 2, or the southern section, is a stone platform on a concrete base and covered on top with a thin layer of concrete. The structure ranges in height from five (5) feet at the northern end to eleven feet six inches (11'6") at the southern end and in width from six feet six inches (6'6") at the northern end to ten (10) feet at the southern end. The structure has one ladder at the northern end and two on the eastern side of section 2.

Swimming platform #2 (YE 0069) is the easternmost swimming platform and is also constructed in two stages using stone and concrete. Section 1, or the northern end, is forty-five (45) feet in length consisting of a concrete deck supported by two (2) stone piers at the northern end and the mid-way point. Section 2, or the southern end, is a stone tower of stone construction. It has a semi-spiral stair case which leads from a small platform connecting sections 1 and 2. The structure ranges in height from five (5) feet to twenty-one (21) feet and in width from six feet six inches (6'6") to nine feet six inches (9'6") on the north and south ends respectively.

Both of the swimming platforms have had what appears to be additional work done to them. Concrete blocks have been placed between the stone piers under section 1 of both swimming platforms to form a wall through which water may pass but people may not. Presumably this was done as a safety precaution.

The picnic sites YE 0070-YE 0073, YE 0078, and YE 0080-YE 0088 are of stone construction. The piers which support the table tops and benches are of stone construction and the benches and table tops are of concrete. Each site is distinguished by a stone outline which establishes the general extent of the site which includes a stone cooking unit and a picnic table with benches. Each site has its own configuration but consists of these elements. The only exceptions to this configuration are YE 0083 and YE 0084. These sites have had the stone cooking unit replaced by an elevated, metal cooking stand. Also at site YE 0084 are two site features. Site feature 1 appears to be standards for a sign of some sort and site feature 2 appears to be a trash receptacle of some sort which is no longer in service.

A number of WPA-constructed walkways, stone walls and other constructed landscape features are included within this district and should be considered contributing resources, though their documentation was not specifically included within the scope of the original survey and thus they

United States Department of the Interior
National Park Service

Historic Places

National Register of Historic Places Continuation Sheet

Section number 7 Page 4

were not counted.

The non-contributing structures of the district include five (5) concrete picnic sites. These are YE 0074-YE 0077 and YE0079. These sites conform to the basic configuration of the contributing sites but have had the table and bench units replaced by concrete and wood units. Also non-contributing to the district is a chemical flush toilet near YE 0079. This structure was added much later than the original construction of the recreation area.

United States Department of the Interior
National Park ServiceNational Register of
Historic PlacesNational Register of Historic Places
Continuation SheetSection number 8 Page 1**Summary**

The Spring Lake Recreation Area Historic District (Ozark-St. Francis National Forest) is eligible under Criteria A and C with local significance. It is considered significant under Criterion A by virtue of its direct associations with the Works Progress Administration (WPA), the Depression-era public works agency that actually supervised the construction and provided the labor to build it. Under Criterion C it is significant as both the most well-preserved example of a Depression-era recreation area constructed by the WPA in western Arkansas and their most sophisticated interpretation of the Rustic style.

Elaboration

The twenty-two contributing resources that comprise the Spring Lake Recreation Area Historic District (Ozark-St. Francis National Forest) were constructed in 1937 by the Works Progress Administration, and possibly in conjunction with the Farm Resettlement Administration (a.k.a. the Resettlement Administration), which is known to have constructed the associated bridge (YE0061; NR-listed on 06/21/90). The shallow basin that would become Spring Lake was nothing more than an eroded water channel that drained the southern side of the bench that forms Chickalah Mountain; however, it provided a good natural basin for a small shallow recreational lake, and thus its selection for this WPA project.

These resources were constructed within this relatively remote area for the purpose of providing developed recreational facilities for both local residents and tourists. The abundance of natural drainage channels that converge here in this shallow basin, along with the natural spring that surfaces at this site, combined to create a site well-suited to the creation of a recreational lake.

The onset of the Great Depression in 1929 and the subsequent advent of such federal public works programs as the Works Progress Administration (WPA) brought a new recreational area to this rural section of Yell County in 1937. The WPA -- an organization that hired unemployed adult men and women to work on a variety of public projects throughout the nation -- was established by President Franklin Delano Roosevelt and his administration as part of the federal response to the dire economic circumstances brought upon the American people by the Great Depression. The WPA was but one of many such public works organizations instituted by the Roosevelt Administration and managed under the aegis of the umbrella agency in charge of all such public works efforts, the Federal Emergency Relief Administration (FERA); other agencies under its direction included the Civilian Conservation Corps (CCC), the short-lived Public Works and Civilian Works Administrations (PWA and CWA), and such regional projects as the

United States Department of the Interior
National Park ServiceNational Register of
Historic PlacesNational Register of Historic Places
Continuation SheetSection number 8 Page 2

Tennessee Valley Authority (TVA) and the Rural Colonization Projects in Arkansas established by the Resettlement Administration at such places as Dyess, Clover Bend and Plum Bayou. Among its various other projects, the WPA constructed a small number of rural recreation areas throughout the state -- though this was not their principal emphasis -- and the Spring Lake Recreation Area was constructed as part of this effort.

The source of the Rustic style employed throughout the construction at the Spring Lake Recreation Area is unclear. While virtually all of the public works agencies in Arkansas during the Depression carried out their construction projects with locally-available materials whenever possible, the design of the various structures at Spring Lake is distinctly reminiscent not only of the materials favored by the CCC, but also of the low, spreading Rustic style that became their trademark. Other known WPA-constructed projects around the state -- including school buildings, courthouses, dams, etc. -- do not uniformly reflect the influence of *any* particular stylistic tradition, apparently relying instead on both materials and construction expertise that were available locally. It is certainly possible that the men working for the WPA were directed by construction supervisors and architects already familiar with typical Civilian Conservation Corps construction, of which there was an abundance in the immediate vicinity by the time this project began (e.g., Mt. Nebo State Park, located approximately eleven miles to the northeast, and the various recreational facilities in the Ouachita National Forest located immediately to the south); and it is also known that the Resettlement Administration had executed a Rustic-influenced construction project on the road running along the western shoreline of Spring Lake, the ashlar-faced stone Spring Lake Bridge (NR-listed 06/21/90). However, no documentation survives directly connecting either of these other public agencies to this WPA project.

Nevertheless, the architecture within the Spring Lake Recreation Area Historic District remains one of the few known examples of an original ensemble of Rustic-style buildings constructed by the WPA and one of the best. The use of thick logs for vertical supports in the picnic pavilions, the overall horizontal emphasis and spreading eaves on the pavilions and the bathhouse, and the heavy, uncoursed fieldstone masonry employed throughout are distinctly characteristic of the Rustic style. Moreover, such designs as that of the bathhouse are particularly successful, as the battered stone walls and spreading, three-dimensional cornice belie the surprisingly regular symmetry of the floor plan.

As such, the Spring Lake Recreation Area Historic District remains locally significant under Criterion A through its associations with the contributions to American social history made by the Works Progress Administration and its associations with the emphasis upon putting the nation's unemployed to work on a variety of projects for the public good. It is also significant under Criterion C by virtue of the recreational area's buildings and structures being remarkably

good examples of the Rustic style of architecture.

Dear Keeper;

Enclosed are six (6) National Register of Historic Places Nomination forms for sites on the Ozark-St. Francis National Forests in Arkansas. These forms were completed as a part of a Challenge Cost Share Partnership with the Arkansas State Historic Preservation Program. The AHPP staff completed the inventory and nomination forms as part of this partnership. The sites include:

Lake Wedington Historic District
Spring Lake Recreation Area Historic District
Gray Spring Recreation Area/Forest Service Road #1003 Historic District
Sugarloaf Fire Tower Historic District
Mirror Lake Historic District
Cove Lake Bathhouse

All of these sites are CCC or WPA built structures under the management of the Ozark-St. Francis National Forest. If you have any questions regarding these sites or forms please contact me at (501) 964-7229.

Sincerely;

GARY D. KNUDSEN
Forest Archeologist
