DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

The Frederick William Cooke Residence, built 1883-1886, is a distinctive asymmetrical 2 1/2 story rock-faced brownstone residence of varied forms and masses having Queen Anne and Richardsonian details. Α first floor porch wrapping the west side has at the main entrance a distinguished Queen Anne sunburst motif set in a paneled pediment. Above the porch is a conical four story turret with heavy Romanesque Revival transom windows, offset by a wide eastern gable with a third floor balcony set within the gable end. The second floor of the main body is punctuated by a wood balcony, which repeats the pilasters, arched enframements and balustrade spindels of the first floor porch below. Α central pedimented dormer features a set of typical Queen Anne paneled windows. Along the east side of the residence is a central projecting port-cochere. Beyond is an oriel capped by a slate roof. A rear wooden porch has been enclosed for use as office space. The west facade beyond the turret is a single flush bay, followed by a double bay peaked gable, behind which is a small side entry bay and a double bay featuring an oriel window. A series of tall monumental brownstone chimneys punctuate the various forms. Curvilinear finials accent the numerous roof peaks completing the playful detailing of the Queen Anne style.

The elaborately paneled interior consists of over twenty rooms around a central hall. There is a small entry vestibule leading to the main hall. The hall is divided into a formal hall and an open stairway hall by an ornately carved archway. An organ, installed around 1930, uses the open stair as an air exchange plenum and resonance chamber. An imposing carved staircase incorporating an inglenook, leads to the second floor open stair and hall. Above the staircase is a stained glass skylight and intake air grills feeding to the 3rd floor organ machinery. The skylight has a border of painted cherubs and clouds. Fine mahogany woodwork, including paneled ceilings, wainscoting and double doorways is found throughout.

On the first floor two main rooms flank the main hall. The two east rooms now have a single large meeting space which had a partition with sliding doors removed. These rooms have carved paneled wainscoting, tiled fireplaces, bay windows and an alcove. The ceiling has been lowered with modern acoustical panels.

The two west rooms remain intact and feature a three quarter round alcove in the turret, two fireplaces, large double, sliding entrance doors, and a textured plaster wall pattern. Divided by double sliding doors, the woodwork in the front room is stained mahogany and the rear room is painted white.

7. DESCRIPTION (Continued)

Behind the hall are simpler rooms, originally pantry, kitchen and storage spaces. These rooms have been converted into offices and restrooms but retain the original late Victorian doors, moldings, and narrow board vertical wainscoting.

The second floor has a tiled bathroom, several bedrooms and a library focusing onto the center hall. One bedroom extends over the porte-cochere making use of elongated windows giving an exaggerated sense of light and openness. Every main room in this level has a different carved mahogany fireplace mantel and ceramic tiles. Other features are the textured plastered walls, bay windows and parquet flooring.

The third floor consists of simple finished servants quarters and a room containing the organ machinery.

The basement has been modified and now contains storage space including cold storage for corpses and an interesting funeral preparation room. The preparation room was probably installed in the 1930's when the building was first converted into a funeral home. The ceramic tiled walls and floor have been virtually unaltered since the 1930's and contains much original mortuary equipment including porcelain tables, hydraulic cadaver elevator, deep bowl sinks and embalming fluid pressure gauge.

In the rear of the Cooke House is a stuccoed, one story hip-roofed garage, circa 1920's. The L-shaped lot has a driveway looping around the house. There is an asphalt parking area in the rear of the house and a large front lawn rising gently to the house. A walkway from the sidewalk is protected by a canvas canopy.

STATEMENT OF SIGNIFICANCE

The Frederick William Cooke House, one of the finest residences in the City of Paterson, is a good local expression of Queen Anne style architecture with Richardsonian features. Though the architect remains unknown, the rock-faced brownstone house was obviously constructed by talented stone masons, perhaps under the direction of an architect. It is further distinguished as the only remaining stone residence along the formerly prestigious residential area of Broadway. The house is well preserved and features particularly fine interior mahogany paneling and an elegant stairwell.

As the last known residence associated with the Cooke family of the prominent Danforth and Cooke Locomotive Company of Paterson, 384 Broadway represents a tangible link with an important family in the nation's locomotive industry. Frederick William Cooke, the third generation of industrial entrepreneurs affiliated with the company, had this building constructed around 1883 when he became an executive with the Cooke Locomotive Company. Cooke lived at 384 Broadway until his death in 1919.

Industry/Transportation

For a time in the 19th century, Paterson was considered the locomotive manufacturing center of the United States. Production of locomotives in Paterson began in 1837 and continued until the 1920's. Three important companies were located in the city - Rogers Locomotive and Machine Works, Grant Locomotive Works, and the Danforth and Cooke Locomotive Company. While the Rogers Works was by far the largest and most famous of the Paterson locomotive engine builders (rivaling the Baldwin Company of Philadelphia), the Grant and Cooke companies were also nationally recognized.

John Cooke, grandfather of Frederick W. Cooke, joined the Danforth and Edwards cotton machinery concern in 1852. Using Cooke's extensive locomotive knowledge, the company, reorganized as Danforth, Cooke and Company, began designing and building railroad engines. Between 1853 and 1882 the company produced over a thousand engines and was recognized as one of the nation's foremost manufacturers of locomotives. In 1865 the firm was again reorganized under the name of Danforth Locomotive and Machine Company. By 1871 John Cooke had succeeded Charles Danforth as president, and when Danforth died in 1876, the company became the Cooke Locomotive Company. John Cooke died in 1882 and was succeeded in the operation of the company by his sons John and Charles and grandson Frederick.

8. SIGNIFICANCE (Continued)

During Frederick William Cooke's tenure as manager of Cooke Locomotive, a major physical expansion of the industrial plant took place, but simultaneously profitability of the production of locomotive engines declined. At a serious competitive disadvantage, by the end of the early 20th century all the Paterson locomotive companies merged with the American Locomotive Company, a conglomerate of the nation's locomotive builders formed to compete with Baldwin. The Cooke Company was absorbed in 1901, but Frederick Cooke continued as executive of the the plant until 1914. Even with the merger, however, production declined rapidly in the city. The last Paterson locomotive came out of the Rogers Plant in 1919.

The Danforth and Cooke Locomotive Works were located on both sides of Market Street between Spruce Street and Mill Street within the Society for Useful Manufactures (SUM)/Great Falls Historic District in Paterson. The district was entered on the National Register in 1970 and designated a National Historic Landmark in 1976. Though much of the Danforth and Cooke complex was destroyed by fires in 1974, the Cooke Administration Building (contemporary with the Frederick Cooke House) and foundry building across the street remain. The relatively spartan industrial plant provides a striking contrast with the elegance of Cooke's 384 Broadway residence.

In 1883 Frederick William Cooke purchased the property upon which his residence stands from William Oakley Fayerweather who had married F. W. Cooke's sister Lavinia some time earlier. Prior to 1887, Frederick W. Cooke was listed in directories as living in his father's residence. In an 1887 directory F. W. Cooke was listed as residing at #384 Broadway. Since the directory was compiled three to six months prior to publication, it is assumed that he moved to his new residence in 1887 or some-From the conveyances of the property Frederick W. Cooke time in 1886. and Agnes Campbell Cooke (wife) sold the property to Rose C. Kosch for \$1.00 and love, who sold it back to Agnes Campbell Cooke likewise for \$1.00 and love the same day. It is likely that when Frederick W. Cooke died in 1919 his daughter Rose C. Kosch received the family house but immediately returned it to her mother, Agnes C. Cooke. However, no obituaries or other references have been uncovered to support this. Agnes C. Cooke retained the property until November 5, 1930 when her executors sold the property to the Legg family. The Legg family operated a funeral business in the house before retiring and selling the business to Julius G. and Lee L. Cheek in 1974. The house has retained the character and handsome stature of the original building.
