Page 2

The structure is in good condition. The only exterior alterations have been in the windows. Most of the casement windows on the north and west side have been replaced with translucent glass block. The same glass blocks were used to fill in the entryway. Aluminum and glass doors also were added.

4. J.I. Case Plow Works Building (Red Ball Building), 2 E. California

A three-story red brick structure. The front facade, facing south, is divided into three vertical sections, with pilasters serving as columnar borders. Unlike many of the structures in the District, there is little ornamental use of brick. The only ornamentation is along the roof line, where horizontal bands of corbelled bricks create a visual impression of cohesiveness. The brick is in good condition.

Typical of the District, the casement windows are large to allow for ventilation. The windows are in good condition. The only alteration on the front facade is the doorway, where the entresol has been replaced by a sign and a modern industrial door has been installed.

The other three sides of the building are simply unfaced brick with no windows or ornamentation. The only distinctive features are the graphics, advertising that "storage" was available.

The interior is unimproved industrial with no distinguishing features.

5. Avery Building (A & B Instruments Building), 15 E. California

A two-story red brick structure. Like other buildings in the District, pilasters break the front facade into three vertical sections, each with two sets of double windows. The lower level is fairly common, and has been altered with siding in the former window bays. Above the windows, however, is a rich pattern of corbelled brick forming diamond shapes in sets of three.

The second story windows provide the distinctive style for the building. Each window is topped by an arch, and each window bay of two windows is also topped by an arch, creating a pleasing image of symmetry. Other ornamentation is provided by limestone detail below the window bays, at each end of the window bay arches, and above each pilaster and below each parapet along the roof line. The brick is in good condition.

Some of the interior has been remodelled to office space, but most of the floor space is still unimproved industrial.

Histories

Although all the buildings share common characteristics and histories, each is different. Short histories of each building follow:

1. Rock Island Plow Building, 29 E. Reno

This four-story red brick building was constructed in 1909 by the Rock Island Plow Co., a subsidiary of the Rock Island Corporation of Chicago. Designed to serve as a wholesale distribution center and warehouse, it was constructed across the street from the Katy depot.

In 1932 Rock Island sold the building to Reinhart and Donovan, a regionally prominent construction firm which had constructed famous buildings such as the Herskowitz, the Trademan's National Bank (on register), the Medical Arts (on register), and the Biltmore.

Since then, it has been used for general storage.

2. Wells Fargo Depot, 115 E. Reno

Constructed in 1906, this ornate one-story building served the famous Wells Fargo express company as a combination office/warehouse/livery barn. Located across the street from the Katy freight depot, it was conveniently situated to coordinate city-wide distribution of goods.

3. Kingman-Moore Building, 100 E. California

Constructed in 1910, this four-story structure was home to the Kingman-Moore Implement Co., distributors of agricultural plows, threshers, balers, and other farm machinery. In 1915 the building was sold to the Emerson-Brautingham Implement Co.; in 1924 it was sold to the Fox-Vliet Drug Company, a regional distributor of drugs.

Today, it serves as a wholesale distribution point for furniture.

4. J. I. Case Plow Works Building (Red Ball Building), 2 E. California

Constructed in 1909, this three-story red brick building was the central warehouse and distribution center for Case Plow Works in Oklahoma. Case began as a manufacturer of agricultural implements, but unlike most of its competitors, the company made a successful transition to the age of mechanization. By the 1930s Case would be one of the leading manufacturers and distributors of tractors and heavy machinery.

By 1937 the building was a warehouse for the O.K. Transfer and Storage Co., a firm which served 24 freight lines to 1,200 cities and towns in Oklahoma City's trade territory.
