## Describe the present and original (if known) physical appearance

### SUMMARY DESCRIPTION:

The Perkins Square Gazebo is an eight-sided, cast iron, open structure of eclectic Victorian design constructed in 1871 and located in a triangular shaped park in West Baltimore. This park was originally surrounded by rowhousing, but now is located in the midst of a complex of high-rise housing projects. The structure features grouped columns on square bases, obtuse pointed archways surmounted by spandrels with foliated designs, an ogee shaped roof, peaked cupola, and weather vane finial. The structure now encloses a simple drinking fountain instead of the original fresh water spring. In the process of being re-painted, the gazebo is in fair condition, except for some notable deterioration at the base.

### GENERAL DESCRIPTION:

The Perkins Square Gazebo stands as the surviving structure of a nineteenth century community which was razed for a high-rise, low-income housing project. It still retains its park-like setting despite the present surroundings, but the park at the intersection of George Street and Myrtle Avenue (adjacent to Harbor City Boulevard) has been modernized with low fieldstone walls, new park benches and stone checkers tables. It is no longer surrounded by flower beds, large urns and a well-maintained park landscape.

The gazebo stands in the corner of the triangular park near the above mentioned street intersection. It is surrounded by a concrete pad with a brick floor immediately around the base. The supporting columns partially rest on a granite curb which forms the inner base of the gazebo. These columns are enclosed by cast iron square bases with beveled corners and an ornamented incised design on each surface. Each column is actually made up of four thin columns grouped together ending in a simple bell capital. The columns support wide obtuse pointed archways with spandrels featuring foliated designs centering on a multi-pointed star. A simple metal cornice surmounts the archways. The ogee shaped roof is made of sheet metal on the exterior and wood strips form the interior ceiling. Ribs of the support structure are visible on the exterior and interior, ending in an octagon on the latter. The roof is capped by a square cupola that features squat columns, simple arches, a peaked lantern and weather vane finial. The floor of the gazebo is exposed aggregate concrete. A simple drinking fountain is centered within the cast iron enclosure. The gazebo is painted aqua blue at the base and columns. The spandrels are light yellow, and the exterior roof is maroon. The structure is in relatively original condition. Early photographs reveal cresting and pointed finials at the perimeter of the roof. Also the floor of the gazebo stepped down to the spring water. These are the only elements missing from the existing structure.

### SIGNIFICANCE SUMMARY:

The Perkins Square Gazebo is a unique architectural structure in Baltimore City, because of its function as a shelter for a spring, its eclectic design, and its cast iron construction. This structure and the gazebo in Union Square are the only remaining spring enclosures in Baltimore and are, therefore, historically significant as reminders of a time when many fresh water springs were a vital part of Baltimore's water system and recreational ammenities. While the Union Square gazebo is classically designed, the Perkins Square structure represents the high degree of ornamentation that was popular in the Victorian era. The eclectic blend of architectural elements produced a fanciful pavillion that functions to delight and attract people to the former spring and public park. The cast iron character of the gazebo is also significant as a representative of this type of construction, because Baltimore was a leader in both its production and use in the mid to late nineteenth century.

### HISTORY AND SUPPORT:

J. Thomas Scharf states in his History of Baltimore City and County, "In the early years of its history Baltimore abounded in many natural springs of pure and excellent water, which for a long period were the only source of supply, and which contributed largely to the health, convenience and beauty of the town."<sup>1</sup> As early as 1810, the city of Baltimore purchased the land at the head of these fresh water springs and opened the springs to the public. The grounds were landscaped and maintained, keepers were appointed to the springs and housed on the site, and enclosures were built over the springs. The springs provided Baltimore with not only an abundant supply of fresh water, but allowed for the creation of pleasant public grounds that may be considered the City's first public parks. The earliest of these springs were: City Spring at Calvert and Saratoga Streets, Eastern Fountain at Eden and Pratt Streets, Western Fountain at Charles and Camden Streets, and the Centre Fountain at the Centre Market. Other springs, however, were not acquired by the City until a later date. Writing in 1881, Scharf states, "the site of Perkins' Spring on George and Myrtle Streets, was for many years only a waste lot, but in the last few years it has been transformed into a beautiful park, small in extent, but one of the most elegant and attractive in the city."<sup>2</sup>

The transformation of Perkins Spring from wasteland to parkland took a long time. The site of the Parkins Square Gazebo was originally part of the Chatsworth estate owned by George Walker, one of the Commissioners of Baltimore.

HISTORY AND SUPPORT (Continued)

It was later owned by John Flemming Perkins, a doctor from the University of Maryland. The name, Perkins Square, is derived from the Perkins family who owned the land prior to its acquisition by the City. As early as 1852, the Baltimore City Council considered purchasing the grounds as a "public resort" for the citizens of Baltimore.<sup>3</sup> The residents near the spring also petitioned the City to make improvements to it and purchase the grounds in 1859, but still nothing was done.<sup>4</sup> In the 1860s, there was strong developmental pressure on the area as the City continued to expand. In order to prevent this scenic resource from being lost to development, the City acted on September 21, 1868, when a City Council Resolution passed to appropriate \$500 to repair and enclose Perkins Spring.<sup>5</sup> In the ensuing years, appropriations were made for planting, sodding the ground, paving sidewalks, purchasing urns, erecting the gazebo, fencing the lot, and building a greenhouse. Although these improvements began in 1868, the land was not leased by the City until 1872, and was not purchased from the Perkins family until October 31, 1881.

The gazebo was undoubtedly, the centerpiece for the square. Although City records do not indicate who designed this structure, a City Commissioners report from January 1, 1871 states, "The house ordered to be erected over Perkins Spring will be completed within the next months."<sup>6</sup> The Perkins Square Gazebo is unique in Baltimore for its Victorian-era eclectic design. Drawings of early spring structures reveal that they were classically styled. The same is true for the extant gazebo in Union Square, which was built prior to the one at Perkins Square. Although the Perkins Square Gazebo has been described as Moorish in style, it is in reality a blend of different architectural elements and should be considered an eclectic composition. Other eclectic pavilion-type buildings were built in this time period in City parks, especially Druid Hill Park, however, this was the first eclectic structure erected over a Baltimore Spring and is one of the largest Victorian-era park-like structures in Baltimore. The use of a rather fanciful design reflects the Victorian-era values towards public open spaces. The design was used to attract and delight users of the spring, while a classical style would have provided a more institutional rather than a recreational atmosphere. Perkins Square was a public place to enjoy a relief from the urban landscape with cool spring water, flowers, and open lawns. These ideals of recreation and enjoyment are expressed in the exuberance of the gazebo's design.

The use of cast iron construction for the gazebo is representative of the popularity of this material in the mid to late nineteenth century. The Baltimore firm of Bartlett and Robbins (later known as Bartlett and Hayward among other names) was one of the nation's leaders in cast iron production. The Baltimore Sun Iron Building was one of the first cast iron buildings in the country and

HISTORY AND SUPPORT (Continued)

led the way for hundreds of cast iron facades that were erected in downtown Baltimore in the nineteenth century. Only a handful of these buildings have survived. It is possible that Bartlett and Robbins produced the cast iron for the Perkins Square gazebo, since an 1879 request to the City Council for improvements and repairs to the square lists a small expenditure for that company,<sup>7</sup> however, there are no markings on the structure to confirm the manufacturers of this unique structure.

For many years residents of West Baltimore enjoyed the spring and gazebo in Perkins Square. Three commissioners were appointed to oversee the park, and the square became a garden spot in West Baltimore in the nineteenth century. In 1881, Scharf stated that the square "is noted for the beauty of its flowers and gardening. Luxuriant beds of coleus and petunias in the most varied colors attract the eye of the visitor, the designs being anchors, stars, shields, etc., of the most elaborate kind. Rockeries, covered with creeping vines and topped with vases of bright flowers, form a beautiful novelty."<sup>8</sup> Ladles were available for people visiting the spring and desiring to drink the cool fresh water.

Eventually the spring became polluted as the area became increasingly urbanized. A drinking fountain was placed in the center of the gazebo. By the 1910s, the greenhouse was removed. As the population of the neighborhood shifted from middle class white to middle class black, the square remained a garden spot, but with growing needs for active recreational space, the movement of the black middle class to suburban areas and the lack of maintenance for the park, Perkins Square became a "seedy oasis."<sup>9</sup>

In 1963, the surrounding neighborhood was razed for a housing project that was built around the square. In the mid-1960s, the gazebo underwent repairs and was re-painted, and the square was modernized to its present appearance. Today the gazebo is the only nineteenth century structure in the area and a reminder of the original spring and pleasant garden spot that Perkins Square once was.

Listing the Perkins Square Gazebo in the National Register of Historic Places will recognize the importance of this unusual structure and could provide a source of funding for its renovation. The bases of many of its columns are deteriorating and there are some substantial cracks in the structure. Despite these problems, the gazebo is an important historical and cultural resource for the low income, black community that surrounds it, and it is the only reminder of the exuberance present in nineteenth century park design in this inner city neighborhood.

Perkins Square Gazebo

Continuation sheet Baltimore City, Maryland Item number 10

Page 4

BOUNDARY DESCRIPTION:

Beginning at the NW corner of George Street and Myrtle Avenue, thence binding westernly on George Street 225', thence northernly 105', thence westernly 106' 4", thence northernly 171' 2" to intersect Myrtle Avenue, thence binding southeasternly on Myrtle Avenue 500' to the place of the beginning.

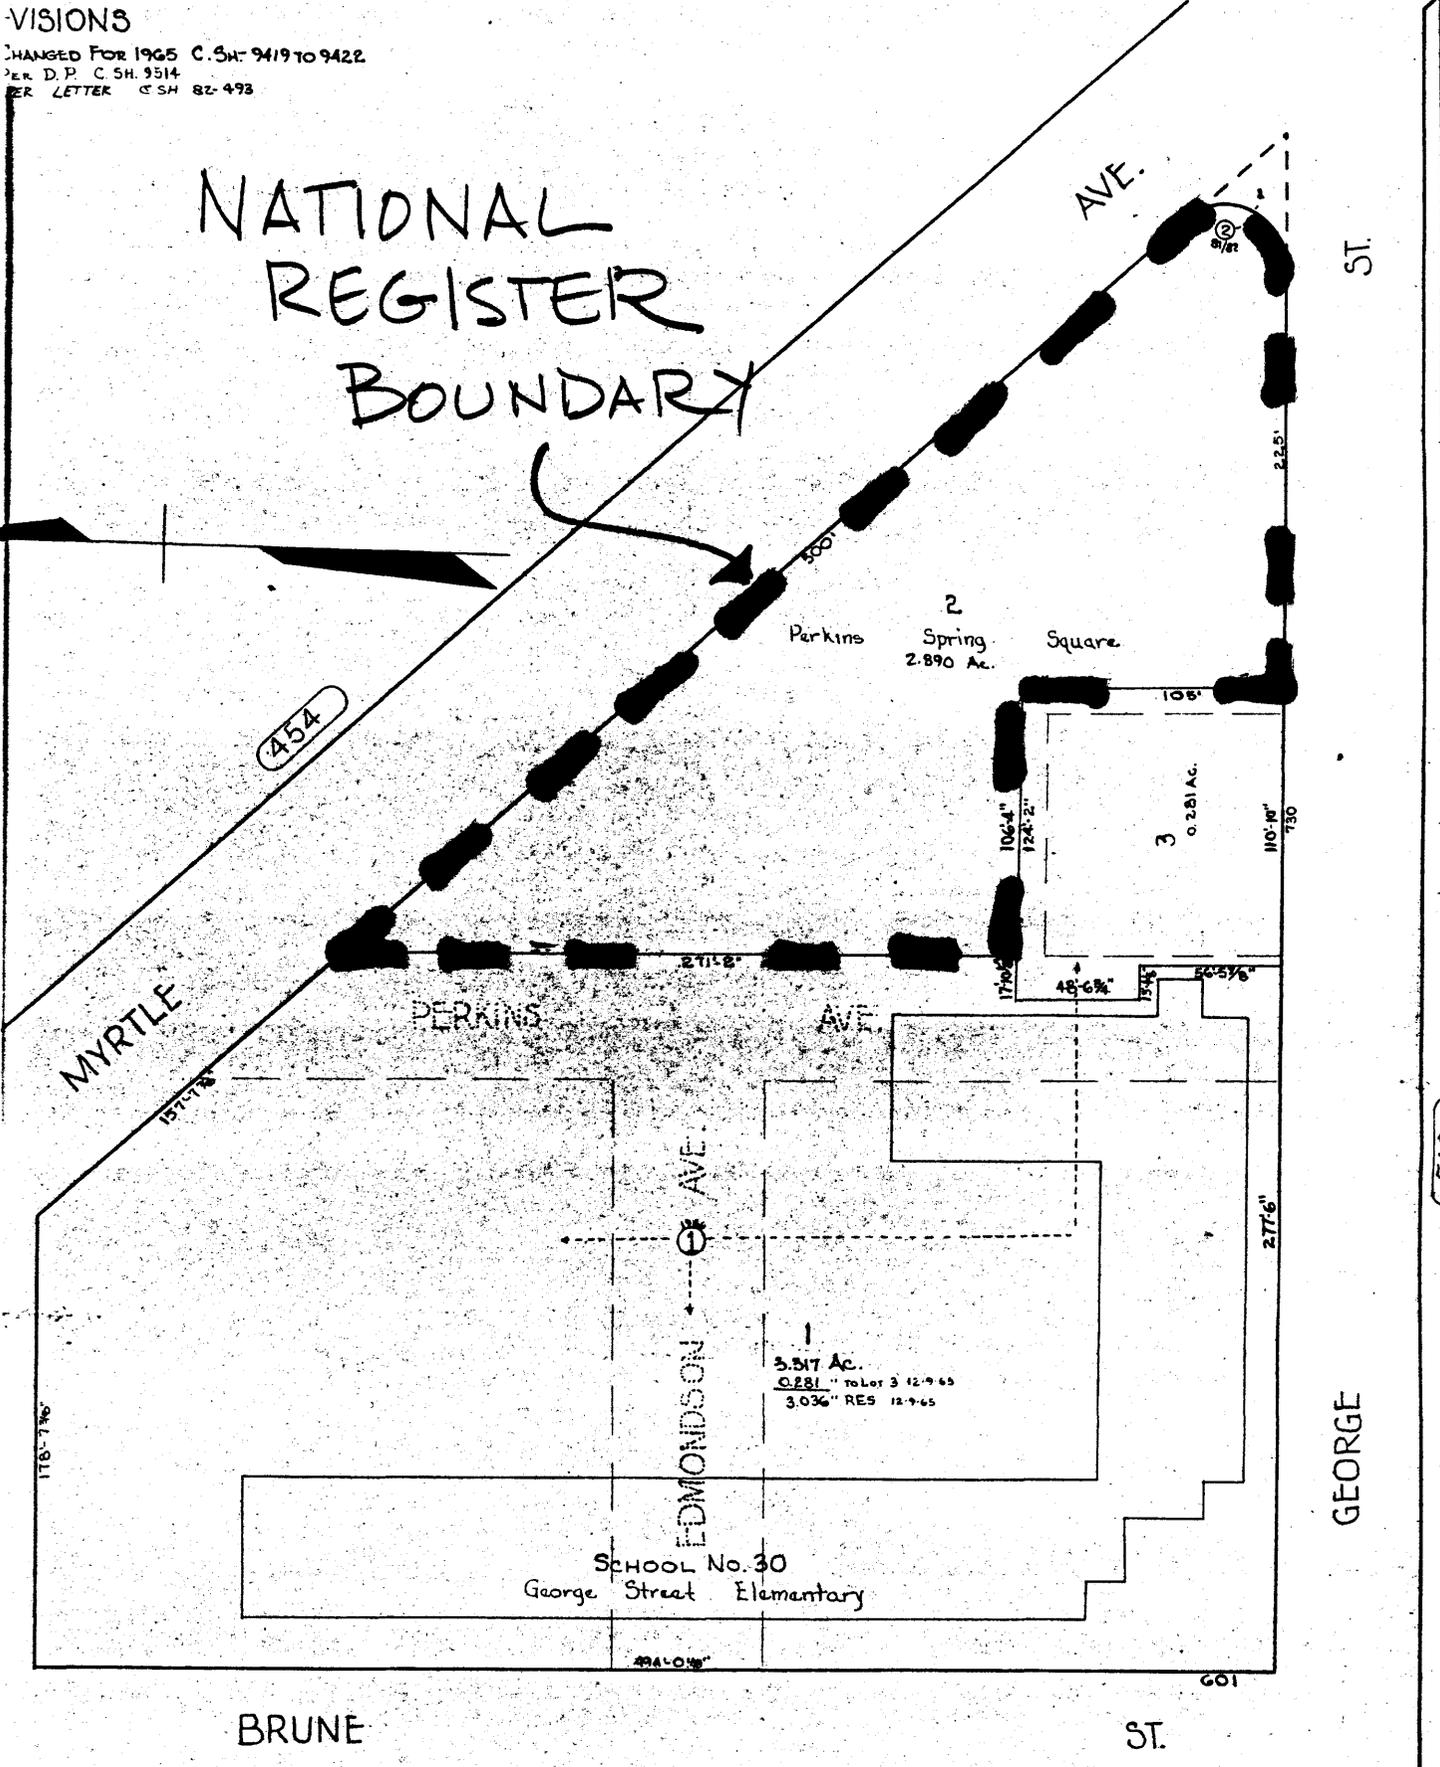

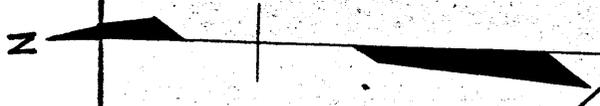

BOUNDARY JUSTIFICATION:

The above boundaries take in Perkins Spring Square. The gazebo is located in the southeast corner of this park. This is the lot of ground that was purchased by the City in 1881 and turned into a park. The surrounding area is taken up by c. 1960 public housing and related community facilities. Thus, the nominated property represents the immediate historic setting of the resource.
