DESCRIBE THE PRESENT AND ORIGINAL (if known) PHYSICAL APPEARANCE

The South Chesapeake City Historic District is bounded on the northeast by the Chesapeake and Delaware Canal; on the southeast by the stream which runs to the canal from a point at which it intersects the east right-of-way line for Route 213 belonging to the State Highway Administration; on the west by the said right-of-way line until it intersects the Chesapeake and Delaware Canal.

The existing buildings of architectural interest in South Chesapeake City reflect the nineteenth century appearance that existed when the town flourished as a center of activity adjacent to an important water artery between the Delaware Bay and the Chesapeake Bay.

Buildings from all periods of the nineteenth century dominate those few of the early twentieth century and those of recent vintage. The structure of interest extend from the Canal to Fourth Street, along Bohemia, George and Charles streets.

The earliest building type is the Federal or "Simplified Regency". The Harriott Hotel, located on the southeast side of Bohemia Avenue at the edge of the Canal, is the best example of the style. It is a two story brick structure above a full basement. The three bay long facade and two bay deep gable are laid in common bond. The entrance occupies the southwesterly bay of the facade and boasts a semicircular fanlight above the paneled door. The windows have twelve over twelve pane sash with paneled shutters on the first story and twelve over eight pane sash on the second story. There are no decorative arch supports above the windows. The cornice consists of four courses of corbeled brick. Across the southeast and northeast sides of the building is an open porch on the first floor with an enclosed area beneath, now used as part of the tavern. Behind the brick structure is a five bay long frame wing. A four bay concrete block structure has been built at basement level adjacent to the Canal. On the other side of the hotel is another house of similar design built of frame construction.

The Classic of "Greek Revival" flowered during an era of affludence that coincided with the flowering of the Canal and locks. The Classic was the international vogue; in America the focus was more strictly upon the "Greek Revival" which became a "National" style during the middle decades of the nineteenth century. Numerous examples of the period exist two and three stories in height and are built of wood with clapboard siding. Dr. Smithers House, built in the 1840's is such an example. Its form is similar to the earlier Federal style, but having the small third story windows and bold dentil cornice below the relatively gently pitched roof, it more logically belongs in the category of Greek Revival. Bethel A.M.E. Church represents a more classic example of the style, with its bold paneled corner pilasters, full pedimented gable and bold paneled cornice. Its entrance architrave also has the aforesaid elements which give it a handsome appearance. One rather naive feature of the church is the bulls eye window between the door and cornice, more usually found in the center

| STATEMENT OF SIGNIFICANCE | | | ······································ |

Chesapeake City is located at what was once the end of one of the nation's early lock canals. The canal was built to connect the Delaware River with Chesapeake Bay via a meandering cut across the isthmus which begins the Delmarva Peninsula. It eliminated the need for a 285 mile river, bay, and sea journey between the commercial region around Philadelphia and that around Baltimore. It has since become a part of the Atlantic intercostal waterway.

Cecil County's founder, Augustine Herman, first saw the need for a canal in the late seventeenth century. In 1799 a corporation called the Chesapeake and Delaware Canal Company was formed and began surveying oper-Among the surveyors was the United States capitol architect, ations. Benjamine Latrobe. Digging began in 1824 and was completed in 1829. The completed waterway was 36 feet wide and ten fet deep. Still, the canal bottom was ten feet above sea level. Locks were thus required to lift vessels 20 feet to float on the canal surface.

A town grew up around the locks because it was a loading and unloading point for ships and canal barges. Also, a mill landing farther up Back Creek which had been a local shipping point now shifted to the town.

By 1839, the new community was known as Chesapeake City. Here lived those who tended the canal. Warehouses and a lumber industry were of early importance. The town grew rapidly throughout the remainder of the century attaining a peak population of approximately 1,400.

In 1919, the Federal Government purchased the canal and operated it with an eye to eliminating its twists, bends and numerous accidents. This was a boon to long distance shippers but a blow to local commerce.

As soon as the locks were removed in a conversion to sea level depth the town ceased to grow. Time and progress passed it by. In 1943 a draw bridge connecting north and south Chesapeake City was destroyed and replaced by a overhead bridge to the west. Hence twentieth century traffic as we know it today was diverted away from the town and it has remained essentially unchanged.

South Chesapeake City Historic District

Number 7. Description continued.

of the pediment. The Italianate style is best exemplified in the H. V. Davis House on George Street at Third Street. Its tall three story, five bay facade is decorated with window cornices and louvered shutters. Across three bays of the first story facade is a porch with pierced decoration in the balustrade and cornice, and brackets supporting the wide overhanging cornice. The same type brackets, in pairs above each bay, support the main cornice. On each side of the low-pitched hip roof is a small brick chimney. Located behind the house is a two story, four bay long wing with secondary entrance having a porch like the main entrance. The rear door has a handsome Gothic hood. The property is farther enhanced by a cast iron fence on two sides.

Two interesting commercial buildings to have survived in South Chesapeake City are the J. M. Reed Store, established in 1861, and the Masonic building constructed toward the end of the century. J. M. Reed's store building, with a four bay wide gable facade (originally three) retains original porch, display windows with paneled shutters and double entrance doors.

The first floor display windows of the three bay three story brick Masonic building are boarded up, but its architectural sophistication is in the second and third stories which bear semicircular arched window separated by pilasters representative of the Romanesque style of the late nineteenth century. Above the third floor is a pedimented gable with round wooden plaque intended originally for the emblem of the Masonic order. Loading doors are located on its First Street side. Both sides are divided into portions by pilaster strips, the northeast side having chimneys above the two inner pilasters. Behind the structure is a one and one half story wing with a mansard roof.

Examples of the "Post Civil War" era can be found. Pierced designs in wood from the time of the Philadelphia Centennial and the "Gothic Revival" exist. One such dwelling is the Rees House located adjacent Reed's Store. Its five bay facade is heightened by a tall gable above the three central bays. The first story porch has low arches with drop finials and a bracketed cornice. Above the three central windows cornices. Like the Davis House, the windows of the first story extend nearly to the floor and have paneled shutters and four over six pane sash while those above have four over four pane sash and louvered shutters. Behind the house is an addition almost as large as the main portion. Between the house and store is a tiny office building in the same style. Along the street is a handsome cast iron fence.

South Chesapeake City Historic District

Number 7. Description continued.

The mansard roof appeared during the post Civil War period. Examples are found on the Masonic building, mentioned before, and the Cooling-Conroy House (no illustration).

Two churches representing the Gothic style exist in Chesapeake City. On George street the Church of the Good Shepherd is indicative of the High Victorian Gothic style of the 1880's and on Third Street, Trinity Church typlified the country version of the late Gothic Revival style. (no illustrations)

The late nineteenth century style known as the "Queen Anne" produce a few examples: The Kinter House on Bohemia Avenue at First Street and the Chesapeake City Bank. Both are exceedingly plain in comparison with the style in more urban areas.

Along George and Charles Streets between the Canal and Third Streets are rows of plainer houses of the late nineteenth century which add a certain period quality to the town.

The buildings and style mentioned have survived for the most part intact and in fair to good condition and some in excellent condition. The scale and quality produced by these buildings hopefully can be retained by careful preservation and restoration at a time when alterations, additions, and deletions are taking place.

South Chesapeake City Historic District

Number 8. Significance continued.

Today, the largest remaining segement of the original town is found on the south side of the canal where several streets of almost unaltered mid to late nineteenth century buildings still stand. Overall, this area retains an authenticity impossible to recreate in any modern construction. It is a part of both national and local heritage, a vital anchor very much needed for the cultural health of the community and the public at large.

South Chesapeake City Historic District

South Chesapeake City is a 19th century town of approximately one hundred buildings roughly nine of which date from the 20th century. The town has few intrusions, chiefly a tavern and a "junk" shop, both of which are housed in 19th century buildings. The commercial structures consist of one store, a post office and a hardware store; they do not alter or interfere with the historic character of the district.

The triangular district is bounded on the southeast by a creek, on the northwest by Maryland Route 213, an elevated highway bridge, and on the northeast by the Chesapeake and Delaware Canal. The construction of Md. Rt. 213 required the demolition of residences on the west side of Charles Street. The noise generated from the highway is evident in the district but is not of sufficient volume to be disruptive. The height of the bridge does not intrude into the district but forms a natural, if man made, boundary.
