National Register of Historic Places  
Registration Form

This form is for use in nominating or requesting determinations for individual properties and districts. *Instructions on how to Complete the National Register of Historic Places Registration Form (National Register Bulletin 16A).* Complete each item by marking "x" in the appropriate box or by entering the information requested. If an item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, architectural classification, materials, and areas of significance, enter only categories and subcategories from the instructions. Place additional entries and narrative items on continuation sheets (NPS Form 10-900a). Use a typewriter, word processor, or computer, to complete all items.

---

### Summary

The Hartford Water Tower is located at the corner of Pine and 1<sup>st</sup> Streets in Hartford, Sebastian County, in western Arkansas. The water tower is at the city's main waterworks complex. It was built by the Chicago Bridge & Iron Company with assistance from the Public Works Administration (PWA) in 1936.

### Elaboration

The Hartford Water Tower is located at the corner of Arkansas Pine and 1<sup>st</sup> Streets in the town of Hartford, Sebastian County, in western Arkansas. The water tower is at the city's main waterworks complex, operated by the Hartford Waterworks. Built by the Chicago Bridge & Iron Company in 1936, the project was funded by the Public Works Administration (PWA). As of 2003 Hartford had a population of approximately 779 while the Hartford Waterworks served a population of 768.

The water tower stands on four steel, lattice support columns that slope inward as the columns rise. Steel lattice, box beams provide horizontal strength between the legs. Additional support is given by the attachment of diagonal steel rod bracing at the junctions of the legs and cross beams. Water is conveyed to and from the tank by a large diameter pipe through the center of the tower.

The water tank itself is a Horton style tank. Horace E. Horton owner of the Chicago Bridge & Iron Company and also the Horton Steel Company designed the original Horton style tank. The tank has a conical roof, vertical side-sheets, and a convex, or bowl shaped, bottom. There is a metal walkway around the diameter of the tank. Access to the metal walkway is by way of a metal ladder. The tank was fashioned of steel plates, each riveted together. Painted silver, the tank is marked in block letters, "Hartford."

### Integrity

The Hartford Water Tower retains good integrity. The water tower has not been altered. Though the decline of the coal mining economy in western Arkansas has greatly reduced the population and size of Hartford, the town remains much the same as when the water tower was built in 1936.

8. Statement of Significance

Applicable National Register Criteria

(Mark "x" in one or more boxes for the criteria qualifying the property for National Register listing.)

- ☒ **A** Property is associated with events that have made a significant contribution to the broad patterns of our history.
- ☐ **B** Property is associated with the lives of persons significant in our past.
- ☒ **C** Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
- ☐ **D** Property has yielded, or is likely to yield, information important in prehistory or history.

Criteria Considerations

(Mark "x" in all the boxes that apply.)

Property is:

- ☐ **A** owned by a religious institution or used for religious purposes.
- ☐ **B.** removed from its original location.
- ☐ **C.** birthplace or grave of a historical figure of outstanding importance.
- ☐ **D** a cemetery.
- ☐ **E** a reconstructed building, object, or structure.
- ☐ **F** a commemorative property
- ☐ **G** less than 50 years of age or achieved significance within the past 50 years.

## National Register of Historic Places Continuation Sheet

Section number 8 Page 1

### Summary

The Hartford Water Tower is being nominated to the National Register of Historic Places with **local significance** under **Criterion C** as a good example of 1930s water tank construction. The Hartford Water Tower is also being listed under **Criterion A** for its association with the activities of the Public Works Administration (PWA) in Sebastian County during the 1930s. The Hartford Water Tower is being submitted to the National Register of Historic Places under the multiple property listing "An Ambition to be Preferred: New Deal Recovery Efforts and Architecture in Arkansas, 1933-1943."

### Elaboration

Newspaper advertisements for Arkansas coal promoted the western Arkansas product as Smokeless Coal and Semi-Anthracite.<sup>1</sup> Indeed low volatility Bituminous coal, or smokeless coal, was a desirable product of the Arkansas coal fields. Because of its moderately high carbon content the coal burned with a high heat and gave off little smoke with little coking. The same is true of the semi-anthracite coal mined in Arkansas; a coal with slightly higher carbon content than low volatility Bituminous. The fact that these coals were less likely to coke, to form less ash, and less smoke than other coals made them particularly desirable for use in steam locomotives, boilers, and power plants.<sup>2</sup>

The coal fields of Arkansas are approximately thirty-three miles wide and sixty miles long in an area that roughly follows the Arkansas River. The first recorded production of coal in Arkansas was in 1848. Production reached its peak in 1909 when 2,400,000 short tons were shipped from western Arkansas mines.<sup>3</sup> Hartford sits toward the southern edge of this coal field but for many years was an important location for all of Arkansas's coal production.

Section number 8 Page 2

Hartford sits in the Upper Sugar Loaf Valley between Poteau and Sugar Loaf Mountains. Dr. J. D. Williams established a town at this site in 1868, naming it Hartford for a nearby ford on West Creek on property owned by the Hart family. A formal post office was established in 1874.<sup>4</sup> The *Goodspeed Biographical and Historical Memoirs of Western Arkansas* notes that in 1889 there were, “four blacksmith shops, one boot shop, and one shoe shop. A grist-mill and cotton gin is owned by J. B. Forester. The population of the village is between 200 and 300.”<sup>5</sup>

The United States Census of 1900 lists the population of Hartford at 460. By 1910, the population grew dramatically to 1,780 and reached its peak in 1920 at 2,067.<sup>6</sup> The explosion in population growth was attendant with an equally dramatic growth in the coal mining industry in the area. The arrival of the Choctaw, Oklahoma and Gulf Railway Company, later the Chicago, Rock Island & Pacific Railroad, in September 1899, opened the coal mines to larger markets in the United States. By 1906 the Midland Valley Railway connecting with the, Chicago, Rock Island & Pacific Railroad at Hartford, offered faster connections to markets in Tulsa and Kansas City.<sup>7</sup> Both railroads offered inexpensive transportation in relation to shipping volume and both encouraged the growth of the mining industry in Hartford.

Sanborn Map Company’s map of Hartford published in May 1908 shows eleven mines operating within seven miles of Hartford. Three of these—Bolen-McDaniel Coal Company, Mine No. 1; Central Coal & Coke Company, Shaft No. 1; and McKinney Brothers Coal Company, Mine No. 6—were within the city limits of Hartford.<sup>8</sup> Coal mining remained an integral part of the economy in Hartford through the early 1900s and into the 1920s. In fact, there were sixteen coal companies headquartered in Hartford in 1922.<sup>9</sup>

Regardless though of the size of the town or the general economic welfare of the businesses in the area, during its boom years the city of Hartford never undertook installation of a citywide water system. Hartford was never a true “company” town in the sense that one company controlled all that went on in the town and provided for all the inhabitants in the town. Central Coal & Coke Company provided some housing for employees in the community and had a company store in Hartford but it also had one mine in the town of Hartford.<sup>10</sup> Instead, Hartford was what the U. S. Coal Commission would have called an “independent” town. The majority of coal miners and mine workers were responsible for their homes; merchants responsible for their own shops and et cetera.

It is due to the fact that Hartford was an independent town that a city wide water distribution and sanitation system was not put in place. In many company owned coal towns of the east it was common for the coal companies to install water supply and sanitation systems to help prevent and eradicate diseases such as typhoid, cholera, and diphtheria.<sup>11</sup> Though the Central Coal & Coke Company’s operations at mines in and near Hartford included company housing and a company doctor, they did not provide a water system.<sup>12</sup> Sanborn Map Company investigators continued to list private wells and cisterns as the only water sources for the town in both 1913 and 1922.<sup>13</sup>

With sixteen coal company headquarters in Hartford in 1922, coal mining was the largest economic force in the community. Though there continued to be a sawmill it was never a large enough industry to be a solid economic foundation. Additionally miners had limited opportunity for farming due to the seasonal operation of coal mining. However, the uneven terrain, the availability of land, and the short three to four month lay off inhibited the coal miners’ opportunity to successfully farm on a large scale. Therefore Hartford remained largely dependant on the coal industry for its economic viability.

Section number 8 Page 4

Hartford's miners readily embraced labor union support and control. Many of the miners joined the Knights of Labor which later became part of the United Mine Workers. In 1914 the owners of the largest mine in Sebastian County, the Prairie Creek Coal Mining Company, Mine No. 4, decided to close their mine to the union and make it an open mine. Inevitably, the United Mine Workers considered this an affront to their programs and the action resulted in violence at, and the ultimate destruction of, the mine. The United States military was called to bring an end to the violence and though unsuccessful in many ways, the union members prevented the opening of non-union mines. Arkansas miners also participated in the nationwide strikes of 1919 in which they gained a twenty-seven percent increase in wages.<sup>14</sup>

While beneficial for the miners and their families, the efforts of 1914 and 1919 were short lived. Competition from mines in Kentucky, West Virginia, Colorado and elsewhere took its toll on Arkansas mines. The coal from Arkansas had many qualities that made it desirable for locomotives and steam coal; however, large discoveries of oil in East Texas and South Arkansas greatly reduced the demand for Arkansas coal. Excelsior Coal Company executives stated that they lost up to seventy-five percent of their steam coal business after the discoveries of oil in the 1920s. The same qualities that made the coal attractive to industries and railroads also proved to be detrimental; the coal was soft and would crumble during shipment. This limited the mine owners to Midwest or mid-South customers. Shipment to the Northeast or to eastern markets was not profitable because of the loss to crumbling.<sup>15</sup>

Loss of markets and competition from larger, modern mines offering lower costs caused many of the mines in and around Hartford to close during the 1920s. The declining demand for coal led to gradual concessions on the part of labor so that by 1927 they were being paid wages equal to those of 1917 and had lost all the gains made in 1914 and 1919. The population of Hartford began to decline as miners sought work in the mines of the east or west. Mine closures sent workers to the furniture mills of Fort Smith or into other manufacturing jobs. The economy of Hartford suffered from the loss of jobs and the loss of tax revenue. Then the Great Depression began.

Section number 8 Page 5

There is no historiography for Arkansas mines and mining in the 1930s and none for Sebastian County and Hartford particularly. However, we do have general figures available through the U.S. census. These figures for coal mining in Arkansas from 1909 to 1939 reveal that overall the number of mines increased slightly following World War I. Total capitalization, the number of mines operating, and the value of products remained relatively constant from 1909 through 1929. From 1929 to 1939 however there is a decrease in the number of mines. The size of the mines operating becomes smaller and the value of products decreases revealing a down turn in the coal mining economy in the decade.<sup>16</sup>

Coal mining tends to be seasonal in nature and the federal census reports for coal mining activity in Arkansas reflect the seasonal nature of the work. Generally employment numbers begin to drop in March and remain low through May hitting their lowest in April. However, for 1929 and 1939 the downturn remains through June and in 1939 the number of miners is dramatically lower with only twelve percent of the yearly average working. For the period between April and June 1939 the number of unemployed miners was between eighty-six and eighty-eight percent.<sup>17</sup>

It was due to these significant unemployment numbers that Hartford was selected for Public Works Administration funding. One of the main goals of the PWA programs was to stimulate economic growth and to provide work for local residents. Hartford's water tower project was one of 124 similar projects in the state funded by the PWA.<sup>18</sup> The project was approved in late 1935 and construction began 2 March 1936. The water tower was completed 24 October 1936.

Similar projects across the state employed between fifty and one hundred men providing beneficial assistance to families and cities across the state. The Hartford project coincided with the yearly slowdown in the mines and provided valuable employment in a period where many struggled. In this way, the PWA project at Hartford was an important part of the New Deal recovery programs in the state of Arkansas. The Hartford water tower serves as a lasting reminder of the PWA's importance in providing jobs, necessary infrastructure, and economic development in Arkansas. Additionally the Hartford Water Tower is a good example of a 1930s water tower built with PWA funds.

### Statement of Significance

The Hartford water tower represents an important part of the Public Works Administration programs in Arkansas. Projects such as these provided employment and tax revenue in Arkansas communities suffering from loss of jobs and loss of residents. The water tower and tank are representative of a very common style of tank, the Horton, and representative of common engineering and construction techniques common at that time. Therefore, the Hartford Water Tower is being nominated to the National Register of Historic Places with **local significance** under **Criterion C** as a good example of 1930s water tank construction. The Hartford Water Tower is also being listed under **Criterion A** for its association with the activities of the Public Works Administration (PWA) in Sebastian County during the 1930s. The Hartford Water Tower is being submitted to the National Register of Historic Places under the multiple property listing "An Ambition to be Preferred: New Deal Recovery Efforts and Architecture in Arkansas, 1933-1943."

RE: Hartford Water Tower; Hartford, Sebastian County

Dear Dr. Matthews,

We are enclosing for your review the above-referenced nomination. The Arkansas Historic Preservation Program has complied with all applicable nominating procedures and notification requirements in the nomination process.

If you need further information, please call Van Zbinden of my staff at (501) 324-9789. Thank you for your cooperation in this matter.

Sincerely,

Cathie Matthews  
State Historic Preservation Officer
