DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

The J. H. Wilkerson & Son Brickworks was located on the north side of the Mispillion River, just east of Milford. When the brick-making operation ceased, the site was abandoned undisturbed. Though the framing of the remaining buildings has deteriorated and the site is overgrown with weeds, the pattern of the brick-making process is still discernible in the layout of the extant machinery and structures.

Easy access to clay determined the sites of such small brickworks as Wilkerson & Son. The clay hole which fed this brickworks began at the Mispillion and fanned out to the southeast. The clay hole is now depleted and its site is now an open field which is not included within the area nominated.

The sheds, machinery, kiln, and other structures directly associated with the brick-making process encompass an area of about 360' by 260'. Some of the structures which housed the machinery remain standing, others have deteriorated or collapsed. Still standing are the storage shed, the shed over the brick-making machine, and one of the drying sheds. These structures are framed of wood and have tin roofs. Some sections are enclosed by walls of tin or wood. A few windows are in evidence in these sections, particularly in the elevated section over the main shed. All of the machinery is in place, including the disintegrators, the pug mill, the brick-making machine, and the brick cutter. The belts and cups which carried the clay through the operation are also present. Nearby is the machine which lifted the clay out of the clay hole and into the trucks which carried it to the works. Around the site are other pieces of equipment used in the brick-making process. These include the drying pallets, the metal wagons which carried the bricks to the drying shed and then to the kiln, and the wooden wheelbarrow used to empty the kiln. The walls of the kiln remain standing, just as they would have been left after the fired bricks are removed.

The brick-making process that took place at this site was documented by the Historic American Engineering Record in 1975. Their report is attached to this nomination.

BUILDER/ARCHITECT

STATEMENT OF SIGNIFICANCE

The brickmaking company of J. H. Wilkerson & Son ceased operation in 1957, the last of eleven similar small-scale brickworks in Delaware to close down. Though the various sheds which house the operations are deteriorating, the brickmaking equipment is essentially intact and in the same position as when the Wilkerson employees left work for the last time over two decades ago. The factory complex thus presents an unparalleled opportunity to examine a Delaware brickworks as it appeared when local brickworks characterized the industry.

Because of the great bulk and low value of both raw materials and finished product, brick manufacturers chose for factory locations sites close to both clay deposits and potential markets. Clay deposits are uncommon in Sussex County, and in 1919 Wilkerson and his son, C. Van Nuis, purchased the Milford Brick Company founded in 1912 and situated upon a prime source of clay adjacent to the Mispillion River. Wilkerson expanded the existing facilities and within a short time became a leading supplier of face and common bricks to a variety of customers within a forty-mile radius of Milford. The Milford Hospital on Clark Avenue is a notable example of the end use of Wilkersons' product.

Through the years there were relatively few modifications to the production methodology established by the company. It is true that steam power supplanted man and animal power and was, in turn, replaced by the gasoline engine in some phases of the process; however, basically, Wilkerson was not a technologically innovative firm and here the brickmaking process was little changed from that of the late nineteenth century.

The brickmaking season ran from April to October and the Wilkerson's average annual production came to approximately 1.25 million bricks of all grades. By the mid-1950's, the clay deposit was exhausted. Attempts to buy clay from other sources proved too costly and in 1957 the works closed. The company currently is a distributor for bricks made by other firms and for fuel oil.

VERBAL BOUNDARY DESCRIPTION

The nominated area forms a rectangle, 260' on its eastern and western sides, and 360' on its northern and southern sides. It is located between the foot of Wilkerson Lane and the Mispillion River. The northern corner is about 200' south-east of Wilkerson Lane and the southern corner is about 200' northwest of the river.
