The E. E. Cooley Building, originally constructed to house the John M. Stone Cotton Mill, is a large rectangular structure approximately 384 feet long and 75 feet wide, not including an additional wing at the rear. The two-story brick building faces north from an elevated site approximately one mile west of the main campus of Mississippi State University, just within the Starkville city limits. Its site slopes to the east, allowing the structure a third, ground floor level at the east end. The main entrance to the building is through a fanlit facade doorway in a square, four-story tower that originally housed a stairway and water tank. Placed west of center on the forty-five bay facade, the tower is embellished with corbelling which becomes progressively more elaborate towards the uppermost level, where corner pilasters and bull's-eye windows on all four surfaces complete the ornamentation.

Physical evidence and early photographs indicate that additions were probably made to the original mill building on at least three separate occasions. The ten easternmost and five westernmost bays, as well as a wing which projects southward at the east end of the building, appear to have been additions to the original fabric, but there is no documentation which indicates exactly when any of these additions were made. A photograph of the mill published in 1913, however, pictures the tower more toward the east of the building as it existed then, evidently prior to the addition of the ten easternmost bays.

At a total cost (including purchase price) of \$4.02 per square foot, the mill building was renovated in 1965 for use by Mississippi State University's Physical Plant (maintenance) Department. Renovation work included the conversion of a portion of the total 107,558 square feet of floor space into business offices; the patching and repair, where necessary, of the three-inch, tongue-in-groove flooring; the splicing of some of the 16" x 18" structural beams to replace rotten sections; the removal of the stairway from the tower; the sand-blasting of the exterior surface of the building to remove modern coats of white paint; and the laying of a special composition floor over the original wooden one so that it could withstand the abuse of heavy-duty equipment. Other minor alterations have further adapted the mill structure to its current function with minimal effect on its physical integrity.

STATEMENT OF SIGNIFICANCE

The E. E. Cooley Building now owned by Mississippi State University was designed by Stewart W. Cramer in 1902 as the John M. Stone Cotton Mill, named for former governor John Marshall Stone (1830-1900), who had been serving as the second president of Mississippi Agricultural and Mechanical College at the time of his death. Stone had been instrumental in the establishment of the Textile School which opened at A. & M. College in 1900, but the connections between its academic training program and the commercial venture represented by the mill extended beyond mere nomenclature.

Although the Stone Mill was neither constructed on the A. & M. campus nor supported with college funds, its early connection with the Textile School is undeniable. Arthur Whittam, the first director of the Textile School, resigned his position there to become the first president of the John M. Stone Cotton Mill, and the membership of the mill's founding board of directors consisted almost entirely of men with close ties to the college among them J. C. Hardy and R. C. King, the college's president and secretary respectively. Even the builder of the mill, W. T. Christopher of Columbus, was also responsible for a number of A. & M. College building projects during the years immediately surrounding the construction of the Stone Mill. 1 There is some speculation that the mill may have obtained much of its initial equipment from the surplus of machinery which was enthusiastically donated to the new Textile School by northern manufacturing firms, and local tradition in Starkville contends that when the Textile School was finally disbanded in 1914, the milling machinery no longer needed by the college was loaded onto wagons and carted to the Stone Mill for continued service. 2

In light of its early and close association with neighboring A. & M. College, it seems appropriate that the John M. Stone Cotton Mill, later operated as the J. W. Sanders Cotton Mill, should have eventually become the property of the college's successor, Mississippi State University. The building continued to function successfully as a textile mill under various ownerships until 1962, and in 1965 it was purchased by the university and adapted to house that institution's physical plant department. The sensitive and economical renovation of such a sizeable factory structure in order to suit the needs of a modern state university makes the present E. E. Cooley Building an exemplary instance of creative preservation through adaptive use.

Significance (continued)

The E. E. Cooley Building of today also stands as a substantial and preserved material representative of an important phase in the economic h of Mississippi. In 1879, the Hinds County [Mississippi] Gazette confiden reported, "The cotton factory fever is just now engaging the attention of many southern towns." These communities were evidently seeking to profi nomically from processing their primary agricultural product on the home By 1900, largely due to legislative encouragement of textile as well as o manufacturing in Mississippi, 6 newspapers statewide were filled with repo of the construction and expansion of local textile mills. The John M. St Cotton Mill/E. E. Cooley Building is a particularly important remnant of turn of the century wave of industrialization. It was almost certainly t of from its inception as a prototype for similar concerns throughout Miss because of its proximity to and close association with the state's profes training facility and the expertise that was gathered there. In the Draf Prospectus for the Stone Mill, printed in 1901, the advantages of this si tion are clearly pointed out in order to encourage potential stockholders invest in the concern:

> Another advantage, and one which cannot be but conceded as of inestimable value to an enterprise of this description is the nearness to the State Textile School, where any information or advice can be had on short notice, and where experiments and tests of any description can be made for the mill free of any cost. . . . Such an institution is a source from which mills can obtain better superintendents, overseers, second hands, section hands, etc., etc., enabling them to turn out goods with some originality at a lower cost of production. Furthermore the proposed mill at this place would, whenever necessary, have at its disposal the advice of the Textile School instructors, all experienced mill men and specialists in their particular branch of the industry. This is an advantage many Northern towns have paid thousands of dollars to secure.

FOOTNOTES

¹Identity of architect, contractor, and board of trustees listed on original cornerstone, which is still in place on the facade of the buildi

²Recounted by the father of Charles P. Newell of Starkville (both fa and son were once managers of the mill).
