NATIONAL REGISTER

National Register of Historic Places
Registration Form

This form is for use in nominating or requesting determinations of eligibility for individual properties or districts. See instructions in *Guidelines for Completing National Register Forms* (National Register Bulletin 16). Complete each item by marking "x" in the appropriate box or by entering the requested information. If an item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, styles, materials, and areas of significance, enter only the categories and subcategories listed in the instructions. For additional space use continuation sheets (Form 10-900a). Type all entries.

Describe present and historic physical appearance.

The James Alexander Veasey House is situated in a residential area overlooking the Arkansas River Valley in Tulsa. The Veasey House property consists of a two-story, Colonial Revival house and a one-story, detached garage. Both buildings are constructed of wood, but detailing and decorative features imitate masonry. The property retains a high degree of integrity of setting, feeling, workmanship, materials, design, location, and association.

The house is constructed in a "T" shape plan with end gables, flanked on one end by a masonry chimney and on the other by a one-story decorative porte cochere. The porte cochere features Tuscan full and engaged columns with square bases and capitals and undecorated cornice, topped with a metal railing.

The roof of the Veasey house features a front, centered dormer and is further penetrated by one internal chimney on the rear wing. The cornice is detailed with dentils and modillions on all eaves and rakes and carried out in returns on the gable ends. The cornice contains a built-in gutter feeding metal downpipes. Modillions continue onto the rake and simulate the appearance of purlins. The decorative dentils also continue up the rake. Historically, the house was covered with a wooden, cut shingle roof, but now has a composition shingle roof.

The pedimented front entrance, which is of recessed Adams style, is centered on the front facade and is set between engaged Tuscan columns. The recessed entry door is further detailed by side and fan lights.

The gables are decorated with a Palladian window above the porte cochere, quadrant lights flanking the chimney on the opposite end and a fan light on the rear wing. The majority of the windows in the house are double-hung, 8/8 or 12/12 light, wooden windows. French doors with multilight transoms are present adjacent to and beneath the porte cochere. Above the porte cochere two dual, multilight doors are present.

The siding on the house is a narrow, bevelled dropsiding that gives the appearance of coursed of masonry. This illusion is further enhanced by the quoins and also keystones, all constructed of wood.

The house is painted white with green, painted shutters on most windows and the French doors beneath and adjacent to the porte cochere.

Continuation Sheet**

Section number 7 Page 1

The interior of the house retains the historic floor plan and most of the historic finishes and fixtures. One mantle has been altered in the main living room, and the kitchen has been modified for modern appliances. Other than these minor alterations, the configuration, trims, ceiling and wall finishes and decorative elements for the most part remain original.

The condition of the house is very good to excellent.

The garage building is a one-story combination one-car garage and efficiency apartment. Decorative elements and features of this building reflect the house on a smaller and simplified scale.

The same narrow wood siding is present, as well as the double hung 12/12 wooden windows. The gable ends feature the decorative returns and multilight windows, but absent are the modillions, dentils and purlins. The wood shingle roof is penetrated by a single brick chimney centered in the ridge. A wide, single-car garage penetrates the elevation facing the street. A small, lean-to addition is present on the opposite elevation. The entire building is painted to match the house. It has no shutters.

The garage is in excellent condition and shows no other exterior alterations.

The Veasey House property retains a high degree of historic and architectural integrity.

8. Statement of Significance

State significance of property, and justify criteria, criteria considerations, and areas and periods of significance noted above.

The James Alexander Veasey House is architecturally significant because it is the best remaining example of a Colonial Revival style residence of all wood construction known to exist in the city of Tulsa. The house was built in 1913, approximately the mid-point of the Colonial Revival style's popularity in the United States.

HISTORICAL BACKGROUND:

James Alexander Veasey came to Tulsa as an attorney with the Dawes Commission. After the Commission's business was completed, Veasey continued to practice law. He specialized in oil and gas law and retired in 1938 as Chief Counsel of Carter Oil Company (a subsidiary of Standard Oil of New Jersey). Among other accomplishments, Veasey was a co-founder of Holland Hall, the oldest private preparatory school operating in Tulsa.

Veasey had the nominated property designed and constructed for his family in 1913. Today the property is owned by his daughter, Mary Veasey Leech.

ARCHITECTURAL SIGNIFICANCE:

The use of all wood construction for Colonial Revival style buildings was prevalent in the early phase of the style's popularity, particularly in the northeastern United States. However, by the turn-of-the-century Colonial Revival style buildings were generally of masonry construction.

The Veasey House represents an interesting reversion to the early period of the style's prominence when wood was often used. Clearly the Veasey House was built of wood in a manner to emulate the appearance of brick and stone. This is evident in the siding, which is narrow as well as flat in application, giving the appearance of coursed brick. Also, the quoins, keystones, pediment and columns all present the look of masonry decorative features but are all of wood.

The blueprints for the house clearly indicate the architect's intended masonry construction, but wood was substituted to meet Veasey's wishes. Thus, the Veasey House is unusual in that it is the only remaining example known in the city of Tulsa of a Colonial Revival style residence executed in all wood construction.

John T. Blair, architect, designed the Veasey House. He was well known in the Tulsa area and held the fourth license issued in the State of Oklahoma for the practice of architecture. While it cannot be absolutely documented, Blair Brothers Construction Company is believed to have constructed the house. John T. Blair and his brother owned a construction company that was often responsible for carrying out designs of the former.
