8. Miller-Jackson Building, 121 E. California

A three-story red brick building. The facade, facing south, is asymmetrical, due to the fact that the building was constructed in three sections. First built was the central section, which included five bays of windows. Then the east and west sections were added using the same types of windows and corbelled brick ornamentation along the roof line.

Along the ground level are narrow light vents to the basement, large casement windows, and a central doorway. Dividing the window bays are vertical pilasters which run from ground level to the roof line. The second and third levels are identical, with two double-sash windows in each bay. The windows are in good condition. Running the length of the building between second and third floors is a large graphic sign, which is in excellent condition.

Above the third level windows is the ornamental brick. Between the pilasters the brick is corbelled, and along the roof line it simulates dentil molding.

Approximately half of the ground floor interior has been remodelled for office space, and the rest is industrial storage.

9. Stanford Furniture Building (Bunte Candy Building), 1 E. Sheridan

A seven-story red brick building. Originally the structure was only five stories; the top two floors were added at a later time using identical design.

The ground floor is distinguished by two arched doorways on the south side. On both sides of the doors are large windows which have been modified with translucent glass blocks. The ground floor windows on the west side have also been altered. Running the width and length of the ground floor is a limestone base.

The upper six stories are similar, with vertically arranged casement windows between pilasters. Each window has a limestone sill and a wedge of limestone top center, creating the visual impression of wedged-mass construction. Between the fifth and sixth levels is a band of corbelled brick; the treatment was repeated along the new roof line above the seventh level. Running the width and length of the roof line is a faded graphic sign; another sign can be seen on the southwest corner of the building. The brick is in good condition; the windows are in varying states of deterioration; and the interior is industrial.

5. Avery Building (A & B Instruments Building), 15 E. California

This structure was built in 1907, and was first occupied by the Avery Manufacturing Company, fabricators and distributors of agricultural implements. By 1912 the building was home to the United Sash and Door Company, distributors of "window sashes, doors, paints, wood trim" and other products for home construction.

6. Merchants Transfer and Storage Building (Commercial Warehouse), 19 E. California

Constructed in 1909, this three story building was occupied by the Merchants Transfer and Storage Co., which specialized in "Distributing Car Lots" of household goods. It later was used as general warehouse space.

7. Oklahoma Hardware Building, 27 E. California

Since it was constructed in 1912, this building has been the home of the Oklahoma Hardware Co. The firm was organized in 1901, and by 1920 it was the state's largest wholesale company dealing in hardware. By 1920 the firm employed 70 workers and specialized in hardware, sporting goods, and automotive parts.

8. Miller Jackson Building, 121 E. California

The first section of this building was constructed in 1909 by the Miller-Jackson Company, the region's largest tin and wooden ware wholesalers. As the company grew they stayed in the same location, but added to the building. Through the years Miller-Jackson has gradually shifted from tin and wooden ware to modern appliances.

9. Stanford Furniture Company (Bunte Candy Factory), 1 E. Sheridan

When this building was constructed in 1912, it was only five stories tall. The first occupant was the Stanford Furniture Company, a wholesale distribution outlet. Later, the top two floors were added and the building was converted to the manufacture and storage of candy.

10. Sherman Machine and Iron Works Building, 26 E. Main Street

Founded in 1899, the Sherman Machine and Iron Works Company built their first building on E. Main. Part of the original foundry still remains, a one-story ediface complete with arched windows and doors. The two-story section of the building, which is on the east end, was constructed in 1928. When first opened the foundry employed 35 people, who molded, cast, and formed metal fittings and machine parts on request.
