Describe the present and original (if known) physical appearance

Located in the heart of downtown South Bend, Indiana, the Palais Royale Building is a three-story reinforced concrete structure. Its two principal elevations, facing North Michigan Street and West Colfax Avenue (east and south, respectively), are finished in ivory glazed bricks and multi-colored terra cotta ornaments of a Spanish Renaissance Revival style, a favorite of the Hollywood-oriented entertainment business in the roaring 20's. The north and west elevations, which face alley spaces, are common brick.

The Palais Royale Building was constructed at the same time and in a similar style to the Palace Theatre (to the north) to create a mixed use development. The ground floor of the Palais Royale was planned as commercial space. Today's tenants include shops, offices, and a restaurant. The upper floors of the Palais Royale were designed as a ballroom. This part of the building has been vacant since 1968.

The original storefront material (besides display window plate glass) is unknown. Newspaper reports indicate a bombing on January 10, 1935, blew out most of the storefront windows and destroyed the corner suite and two adjacent shops in the building. A photo, apparently taken in the late 1930's, shows a homogeneous storefront system with pilaster covers of black spandrel glass, a popular material of the time. Still intact on part of the south elevation, this cladding system probably was installed to replace the bomb-damaged sections. The ground floor spaces and storefronts have been altered many times since the bombing and now feature a mixed assortment of cladding systems: metal panels, glass blocks, plastic panels, rough wood siding, quarry tile and black spandrel glass. On the North Michigan Street (east) elevation, the building skin was recessed about ten feet along two bays. Such modern renovation is quite out of character with the original building.

The original entry to the ballroom was marked near the center of the south elevation by special architectural ornaments and a marquee canopy. A spacious foyer on the ground floor led to a grand staircase in the northwest corner of the building. Climbing the staircase, one emerged on the second floor into a gallery space, flanked by lounges, on axis with the two-story ballroom space beyond. On the third floor above the gallery and lounges, a balcony space overlooked the ballroom.

This series of spaces has undergone many changes. The entry foyer at ground level was badly damaged by the 1935 bombing. During World War II, the foyer and lounges were renovated as a Service Men's Center, with new wall partitions to provide a music room, library, lounge and bridge room. In the 1950's, the grand staircase to the ballroom was closed off so that the foyer could be renovated as a separate restaurant. A new street entrance to the ballroom area was created by cutting a stairwell into a corner of the ballroom floor.

A principal architectural feature, both inside and outside the Palais Royale Building, is a series of monumental, semi-elliptical-arched windows. Each grand window is crowned by a curved terra cotta casing mold and framed by unique eclectic colonettes. The glazed area of each window is divided in two by a spandrel panel of terra cotta, featuring a multi color, floral relief design.

Statement of Significance (~~insert paragraph~~)

The Palais Royale Building and its companion, the Palace Theatre (now Morris Civic Auditorium, not included in this nomination) are architecturally significant as examples of the Spanish Renaissance Revival Style, featuring finely-crafted terra cotta ornaments with a lively churrigueresque quality. Most of the terra cotta ashlar and moldings have an unusual, ivory-colored, granite-textured surface, in contrast to the floral relief details, which are richly colored in deep brownish red, yellow, light blue and light green. The Palais Royale Building should be considered distinct from the Palace Theatre due to several factors: exterior massing expresses a separate visual identity for each building; the two buildings are structurally independent; they serve different functions, and are not internally connected; and, they have been under separate ownership since 1935.

In addition to its architectural significance, the Palais Royal is important because of its strong role in community cultural life since it was opened in 1922. Throughout its classic life story, the Palais Royale has reflected the flow of national economic and cultural events.

The Palais Royale was developed in 1922 by the Palace Theatre Corporation, which included several prominent local businessmen and was headed by Jacob Handelsman, an experienced promoter from Chicago. J. S. Aroner, also of Chicago, was the architect. During the Depression, both buildings were in federal receivership. In 1935, a bombing demolished parts of the Palais Royal ground floor. During the Big Band era, from 1935 to 1946, many well known groups played the ballroom, including Tommy Dorsey, Jimmy Dorsey, Duke Ellington, and Woody Herman. In 1940, the Palais Royale was the scene of a banquet and ball, attended by Ronald Reagan and other Hollywood stars, for the gala world premier of "Knut Rockne-All American", filmed at nearby Notre Dame campus. During World War II, the Palais Royale became a Service Men's Center, funded by a United War Chest grant, plus donations. After the war, the Palais Royale fell on hard times. In the late 1960's, a teen music club briefly reopened the ballroom.

Despite a long period of neglect, the Palais Royale is a treasure to the community for both aesthetic and sentimental associations; it is a key surviving element of the downtown urban fabric.

Page 1

Extra architectural terra cotta ornament was lavished at the curved (southeast) corner of the Palais Royale Building and at the entry to the ballroom foyer near the center of the south elevation. At each location the arched window is flanked by a pair of major terra cotta pilasters, featuring floral relief carvings on the shaft and composite capitals. Delicate spiral colonettes are added to the pilasters at the building corner. The parapet wall at both the corner bay and the ballroom entry bay is covered with terra cotta floral relief panels similar to the window spandrel carvings. These pilasters and parapet panels are virtually intact, but the terra cotta crown pieces (which extended above the top string course/cornice line) and the metal lanterns have been lost. Also missing are most of the small terra cotta finials originally mounted on the arched window casing. Fortunately, all of the small terra cotta brackets (below the string course/sill line) at the window colonettes and major pilasters, have survived.

The physical condition of the Palais Royale Building structure and exterior may be summarized as follows. Despite the lack of expansion joint detailing in the original construction, only one small crack has developed above the grand window on each side of the curved building corner. All major structural elements (columns, floor slabs, and roof trusses) appear to be in excellent condition. Most of the unique, Spanish Renaissance Revival style terra cotta ornamentation has survived intact. Some terre cotta pieces are missing and a few others exhibit material spalling. All surviving colored terra cotta pieces exhibit little or no fading.
