National Register of Historic Places Registration Form

EB 1 2 (ED)

NATIONAL REGISTER

This form is for use in nominating or requesting determinations of eligibility for individual properties or districts. See instructions in *Guidelines* for Completing National Register Forms (National Register Bulletin 16). Complete each item by marking "x" in the appropriate box or by entering the requested information. If an item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, styles, materials, and areas of significance, enter only the categories and subcategories listed in the instructions. For additional space use continuation sheets (Form 10-900a). Type all entries.

Describe present and historic physical appearance.

The boundaries of the Lake Charles Historic District encompass 380 buildings, with contributing elements ranging in date from c.1880 to 1939 and styles running the gamut from Italianate to Modernistic. All but a handful of the contributing elements are residences. The district is located adjacent to downtown Lake Charles and has an intrusion rate of 26%.

The regional hub city of Lake Charles is located in southwestern Louisiana along the Calcasieu River and a two-by-three mile lake of the same name. The city was the focus of a major lumber boom in the late nineteenth and early twentieth centuries, and the nominated district developed as a direct result of this growth and prosperity. Lake Charles became the parish seat of Calcasieu in 1852, although by the eve of the Civil War it was still a backwoods village with only a handful of families. In fact, settlement was confined to the present downtown area until the lumber boom took off, beginning in the 1880s. Lumber had figured prominently in the town's history from the beginning, but the peak years were c.1885 to c.1915. Due to a floodtide of Northern immigration and the growing lumber industry, the town's population more than quadrupled in the 1880s. It then doubled in the '90s and again in the first decade of this century, paralleling lumber's meteoric growth. As the population of the little hamlet hugging the lake expanded, the present district was born. As the only historic residential neighborhood in Lake Charles, it is where many of the lumber mill workers lived and where timber barons built their homes using the finest woods possible.

The houses in the district reflect the complete range on the economic scale, from mill owner to common laborer. There are, however, no clearcut "rich" or "poor" neighborhoods. Broad, Kirby and Pujo streets today retain the greatest number of impressive residences, and the evidence indicates they were always prestigious streets. There was also a concentration of grand houses at the corner of Mill and Moss. (Of the original three, two survive.)

The district has a mixed one and two story scale, and almost all of the buildings are of wood construction. About a fourth of the contributing elements are two stories, and in some places they appear in a goodly concentration. For example, there are blocks of Kirby and Pujo with a two story scale. Also, because many of the two story residences are quite impressive, they obviously dominate the smaller houses around them. The presence of numerous mature oak trees is another distinguishing feature of the district. On certain streets, the trees, larger lots and large houses prevent general view photographs showing more than one building.

State significance of property, and justify criteria, criteria considerations, and areas and periods of significance noted above.

The Lake Charles Historic District is locally significant in the areas of industry and architecture. It is all that is left to represent the lumber boom prosperity of Lake Charles in the late-nineteenth and early-twentieth centuries. It is architecturally significant as an outstanding collection of historic buildings within the context of southwestern Louisiana. It shares this distinction with two other towns, Crowley and Jennings, and in some respects is superior to both.

Historical Significance:

From practically the beginning, Lake Charles' economy was dominated by lumber. The city was located in the midst of one of the finest longleaf pine stands in the world and was blessed with an advantageous location on a lake through which flows the Calcasieu River with its many tributaries. This network extended far into the pine belt and to the Gulf of Mexico. Logs were brought down the Calcasieu River and rafted into the lake, where many of the sawmills were located. (The others were along the river.) Schooners then transported the finished product to Gulf ports and elsewhere.

There were two small sawmills in the Lake Charles area as early as the 1850s, those of Jacob Ryan and Daniel Goos. The industry grew steadily in the post-war years, with production almost doubling in the 1870s. The decade of the '80s witnessed the beginnings of the so-called "middle phase" of lumbering in Louisiana as northern lumbermen looked to the South for new virgin forests. This decade marks the beginning of the great boom period that increased in intensity in the early years of the twentieth century.

Having exhausted the timber resources of their native states, experienced and wealthy northern lumber barons began to invest in vast acreages of timberland in the Lake Charles area. Among these "Michigan men" (as they were referred to by locals) were R. H. Nason, William E. Ramsey, C. W. Penoyer, and N. B. Bradley. Nason, an Englishman by birth, had thirty years experience in the lumber industry in Michigan when he came on an exploratory journey to Louisiana. Nason and his associates acquired the old Goos mill property in 1883 and formed the Calcasieu

Lake Charles Historic District, Calcasieu Parish, LA Section number _____ Page ____1

THE BUILDING STOCK

Queen Anne Revival/Eastlake (20%):

These houses are the most significant ones in the district. They are unusually elaborate, and fully a half of them are two stories, with two being in the two-and-a-half/three story range. Most of these are Queen Anne Revival houses with Eastlake ornamentation, but the category also includes boxy houses with Eastlake ornamentation and transitional Queen Anne/Colonial Revival residences. The latter are essentially Queen Anne houses with Colonial Revival galleries.

On the whole, the Queen Anne Revival style in Louisiana is conservative and lacks the elaborate massing, contrasting materials, decorative work, etc. of Northern and Eastern examples. This is largely true even in New Orleans, although there are some very noteworthy exceptions. Textbook examples of the style tend to be concentrated in areas of heavy Northern immigration, particularly the southwestern prairie region where Lake Charles is located. This area was settled principally in the late nineteenth century by Midwesterners, and it is in towns like Jennings, Lake Charles, and Crowley that one sees Queen Anne houses more like the national norm. Particularly distinguishing features of the Lake Charles examples include elaborate massing (including ten turrets); richly carved vergeboards; a large amount of shingling of different types (including gables and exterior wall surfaces); various sunburst and fan forms in gables, gablets, and brackets; and a wide variety of elaborate gable peak ornamentation. Even many of the smaller one or one-and-a-half story cottages are noteworthy.

Particularly outstanding houses in this category include #s 39, 40, 51, 69 71, 83, 145, 146, 147, 181, 214, and 343. (See inventory for descriptions.)

Colonial Revival (10%)

This includes both the standard Colonial Revival and Lake Charles' own distinctive interpretation. Colonial Revival residences in the district tend to be fairly grand, with over three-fourths being two stories. Several of the mainstream Colonial Revival houses have colossal order pedimented porticos (for example, #s 129, 192, 200, & 335). One example, #169, has a colossal order gallery on three sides, while #52 has a colossal, three column porch.

Lake Charles also developed its own variation of the Colonial Revival style, with the distinguishing feature being a very distinctive paneled, slightly tapered square column. Sanborn map research on selected examples reveals that the earliest date from the c.1905-10 period. The Walter Goos House (#306) is a particularly noteworthy example. It was built sometime between 1903 and 1909 to replace an earlier, smaller house on the site. This large house has colossal order, very slightly tapered, paneled columns with necking and a paneled section

National Register of Historic Places Continuation Sheet

Lake Charles Historic District, Calcasieu Parish
Section number 7 Page 2

above. There are also matching end pilasters. Around 1910, the Eastlake gallery on the Ramsey House (#147) was replaced with one whose columns are almost identical to those on the Goos House. Other instances of earlier houses receiving a new paneled, tapered column gallery are #s 85 and 362. Another noteworthy example of the style is #137, with a colossal gallery on three sides.

It should be noted that this style of column continued in popularity through the years and is found on foursquares and bungalows. In the opinion of the State Historic Preservation Office, it is a distinctive variant peculiar to Lake Charles, and as such, is an important part of the city's architectural heritage. To facilitate identification, the term "Lake Charles" columns or gallery is used in the inventory.

Bungalows (28%):

This category includes both dictionary definition bungalows as well as two story houses with bungalow details (for example, foursquares). All but a handful are generic examples of the style. Particularly outstanding bungalows include #s 59, 154, 160, & 204. (See inventory for descriptions.)

Twentieth Century Eclectic (3%):

Although this category only accounts for 3% of the total building stock, almost all the examples are major landmarks. They include the Renaissance styled former post office (#357); a Spanish Colonial villa on Broad (#124); the 1920s Gothic Revival First Methodist Church (#142); a neo-Georgian mansion designed by the noted New Orleans architectural firm of Favrot and Livaudais (#84); the neoclassical French-looking Masonic Hall (#358); the Byzantine inspired Temple Sinai (#359); and the Gothic Revival Church of the Good Shepherd (#288, National Register).

Other (3%):

This category encompasses a handful of styled buildings that do not fit into one of the above categories. Examples include an Italianate house (#186); St. John Lutheran Church, with its Italianate windows (#314); and the Modernistic Southwestern Louisiana Technical Institute (#290).

<u>Plain</u> (10%):

These are legitimately historic buildings that feature no pronounced style. The State Historic Preservation Office has used this category in several district submissions and feels that it is preferable to forcing buildings into stylistic categories. For examples in this category, see photos for buildings 209 & 283.

National Register of Historic Places Continuation Sheet

Lake Charles Historic District, Calcasieu Parish

Section number ____7 Page ____3

Intrusions (26%):

An intrusion rate of 26% is about average for a Register district in Louisiana. Included in the intrusion, or non-contributing, category are less than fifty year old buildings and historic buildings that have been severely modified. In the case of the latter, evaluations were made by the State Historic Preservation Office staff on a case by case basis. Most of the intrusions are small brick ranch houses or small altered cottages. Noteworthy exceptions are the large modern post office (#180) on Moss and various commercial/institutional intrusions on Broad. The post office obviously represents a break in historic character, but the block of houses beyond it was significant enough to reach for, including a turreted house and an Italianate house that is probably the oldest building in the district. The largest concentration of intrusions occurs along Broad, a major traffic artery, and there are gaps in the district's historic character along this street. However, the important point is that many of the district's most outstanding buildings are on Broad. There is also a concentration of intrusions along Hodges at Pine, but it was necessary to include them to take in two two-story Queen Anne Revival houses (#s38 & 39), one of which (#39) is a major architectural landmark.

Contributing Elements:

The district has one period of significance under Criterion A (c.1885c.1915) and one under Criterion C (c.1880-1939). As explained in Part 8, the period of significance under Criterion A (c.1885-c.1915) is the generally recognized lumber boom period in Lake Charles. The district is also architecturally significant as an outstanding collection of historic buildings within southwestern Louisiana, with contributing elements ranging in date from c.1880 to 1939. While there are certain elements (see Part 8) which make the greatest contribution to this significance, the district has noteworthy buildings in a wide variety of styles ranging from 1880s Italianate to a 1939 Modernistic school. In short, the district should be viewed as a <u>tout ensemble</u>, with any building fifty years old or older and not badly modified being counted as a contributing element.

Alterations to Contributing Elements:

By and large the district's contributing elements are in a good state of integrity. When alterations became too serious, the building in question was counted as non-contributing. Asbestos, aluminum and vinyl sided buildings were handled on a case by case basis, depending on whether the substitute siding was sensitively installed. Perhaps the most serious loss of integrity to a contributing element is the addition of a brick one story commercial building to the front of a two story frame Queen Anne/Colonial Revival residence (#135). However, the larger historic building dominates and the commercial wing could be removed easily enough.

- 133. 916 Broad. Contributing element. c.1915. Two story frame house with paneled ("Lake Charles") columns. First floor gallery that curves around to the left appears to have been added, using salvaged contemporaneous columns that do not match.
- 134. 914 Broad. Non-contributing element. One story brick commercial intrusion.
- 135. 900 block Broad. Contributing element. c.1905. Two story frame Queen Anne Revival/Colonial Revival house with two story Ionic gallery which curves around the side to follow the contours of a turret-like projection. Has received a one story brick commercial addition to the front. Although this addition is obviously very insensitive, the original building still dominates and the brick addition could be removed.
- 136. 900 Broad. Non-contributing element. 1940s gas station.
- 137. 903 Broad. Contributing element. c.1915. Mammoth two story frame peripteral style house with "Lake Charles" columnar gallery on three sides. A portion of the front and side galleries has been glazed in for restaurant use. A covered walkway has been added onto the front using paneled columns; also a side addition.
- 138. 800 block Broad. Non-contributing element. Imperial 400 motel.
- 139. 815 Broad. Contributing element. 1930s. Stone-faced cottage with Romanesque entrance and prominent front chimney.
- 140. 800 block Broad. Non-contributing element. One story modern commerciallooking building.
- 141. 803 Broad. Contributing element. 1920s. Red brick garage/filling station with blue glazed tile roof and prominent gabled porte-cochere on the front.
- 142. First United Methodist Church. Contributing element. 1920s. Connected church and parish hall centered around an open court. Ornamented with various Gothic features ranging from Early English to Perpendicular Style.
- 143. Corner Broad and Kirkman. Non-contributing element. Modern one story gas station/convenience store.
- 144. Non-contributing element. Long, low, one story brick building belonging to Methodist church complex.

National Register of Historic Places Continuation Sheet

Lake Charles Historic District, Calcasieu Parish Section number _____ Page ____14___

- 145. 723 Broad. Contributing element. c.1905. Rambling frame one story Queen Anne Revival/Colonial Revival house with side turret that juts prominently above the roofline and a curving Ionic gallery with dentils and a balustrade above echoing the one at ground level. Faceted turret also has a denticular cornice. In the 1920s the house received its present green tile roof (including the turret) and was extended to the side, culminating in a portecochere. The gallery extension follows the lines of the original, including the balustrade and denticular cornice; however, the columns are different. Retains two historic dependencies.
- 146. 705 Broad. Contributing element. c.1885. This three-story frame mansion is the most impressive house in the district. It is crowned by a square tower with a flared roof, Italianate brackets, and a flared base with an inset arched dormer on the front and side. The house has various Gothic windows, including a prominent double window in the front with an ogee arch. Gables richly ornamented with various shingle patterns and elaborate vergeboards. An 1895 photo in a special edition of the Lake Charles Daily Press shows that the house originally had an Eastlake gallery. In about 1910 the Eastlake gallery was replaced with the present Colonial Revival gallery. Also, at that time a porte cochere echoing the gallery was added at the rear of the side elevation. This porte cochere as since been enclosed.
- 147. 626 Broad. Contributing element. c.1885. Huge, rambling two-and-a-half story Queen Anne Revival frame house built by Michigan lumberman W. E. Ramsay. Turn-of-the-century photographs show the house with its original two story Eastlake gallery. (Back wing gallery identical and survives.) Sanborn maps reveal that the present two story "Lake Charles" gallery dates from c.1910. It follows the contours of the original, including a bulge corresponding to a turret-like projection on the facade. (It is actually a turret, except that it does not extend much above the roofline.) The portecochere has a limestone arched side elevation on the ground level and is galleried on the second. It is original to the house. Other outstanding features include shingling on a great deal of the exterior walls, a bartizan-like turret on the rear, and numerous stained glass windows. Retains one historic dependency.
- 148. 616 Broad. Contributing element. c.1930. Two story brick Colonial Revival house with one story pedimented porch.
- 149. 1030 Pujo. Contributing element. c.1905. Boxy two story frame house. Lost its original Eastlake gallery in 1918 hurricane. Present sympathetic one story porch added by current owner as was salvaged Gothic Revival window on facade.

Lumber Company. In 1886, the company was reorganized as the Bradley-Ramsey Lumber Company, composed of "some of the largest lumber manufacturers of Michigan." The company in time had two mills, the Michigan Mill and the Mt. Hope Mill, and was truly a gargantuan operation. While some of the "Michigan men" never actually took up residence in Lake Charles, R. H. Nason and William E. Ramsey built impressive homes on Broad that survive (#s 146 and 147).

The "Michigan men" were but part of a floodtide of Northern immigration to southwestern Louisiana beginning in the 1880s and continuing into the '90s. A leading figure in recruiting immigrants to the Lake Charles area was J. B. Watkins, who headed the American Land and Timber Company, an English-backed syndicate. This firm had purchased a vast amount of acreage in the area and aimed to sell it at a profit. Watkins launched a major campaign advertising Lake Charles all over the country, including founding a newspaper called <u>The American</u> for the purpose.

Despite the importance of the Northern "invasion," it should be noted that many of Lake Charles' major sawmills were owned and operated by local people. A good example is the J. A. Bel Lumber Company, second only to Bradley-Ramsey in size and production. Its owner, a native of New Orleans, had moved to Lake Charles as a teenager, began work as a laborer in a sawmill, and worked his way to the top. Unfortunately, Bel's splendid Eastlake mansion on the corner of Mill and Moss, was demolished in the 1950s.

Fueled by Northern and local capital and a seemingly inexhaustible supply of timber, the Lake Charles lumber industry entered in the 1880s a great boom period that lasted until World War I. A further "shot in the arm" was the arrival of the first railroad in the area in 1880 with others to follow shortly. Railroads were an impetus to further growth because they opened markets in the hinterland, but they supplemented rather than supplanted water transportation. Calcasieu lumber was shipped all over the world as well as to neighboring Texas and various parts of the United States.

The timber supply, however, was not inexhaustible, and the industry began its decline around World War I. Even as early as 1910, one of the stated purposes of the Chamber of Commerce created in that year was to recruit new industry and diversify the city's economy. The statement of purpose noted: "For some years, Lake Charles has been like a garrison consuming its own resources. . . The city has depended upon the rapidly diminishing lumber industry." During the early 1920s Lake Charles underwent a staggering depression, and it appeared to many that the city would become a ghost town. When the young Sam H. Jones, later to be governor, arrived on January 1, 1925, he

National Register of Historic Places Continuation Sheet

Lake Charles Historic District, Calcasieu Parish, LA Section number $\underline{8}$ Page $\underline{2}$

found a town that was "economically pretty well run down" and gradually drying up. The city, however, recovered in the '20s, with the gain of a much sought after, locally funded deep water port in 1926 as probably the crucial factor. The advantages of a deep water port enabled Lake Charles to emerge as a major industrial center. It should also be noted that oil began to be an important factor in the 1920s, as shown, for example, in the number of oil companies in Lake Charles on the 1925 Sanborn map. Of course, the lumber era did not end overnight, but instead the industry underwent a steady decline from World War I through the 1920s as other industries gained in importance. The period of significance for this nomination is c.1885 to c.1915, the generally recognized boom period when lumber was far and away the single most important factor in the Lake Charles economy.

There is no question that lumber was king in Lake Charles during this period. By 1895 nine mills were producing 140,000,000 board feet annually and employing 1,300 people. By 1907 the employment figure was 1,500. When one considers that the city had a population of 6,680 in 1900 and that many of these were women and children, it is fair to say that the majority of households derived their income from the lumber industry. This is also borne out in a 1901 city directory which provides the occupation of each individual. Rice was also an important factor in the city's economy during the same period, but its impact paled in comparison to that of lumber. There were three rice mills, but even the largest, dubbed the "world's largest rice mill," employed only sixty men.

Old photos and Sanborn maps in particular show that the Lake Charles area was truly a sawmill landscape. The vast mill complexes were located north of the district along the Calcasieu River and in various places along the shores of Lake Charles. In addition to sawmills, there were various related industries such as shingle and fence factories. Sanborn maps show often gargantuan complexes with mills, a fascinating network of tramways, various ancillary functional buildings such as sheds, often an office building, and sometimes commissaries, dwellings and boarding houses. Generally speaking, those closest to Lake Charles did not have commissaries and housing, while those further away in the milling districts of Lockport and Goosport did. For example, the huge Bel Lumber Company, located six blocks east of the district, was an industrial complex rather than a selfcontained mill town. In addition to the mill and tramways, there were a large two story office building and a huge dry lumber shed. The same was true of the Mt. Hope Mill located about four blocks north of the district. In contrast, the Bradley-Ramsey mill, located about two-and-a-half miles north of downtown Lake Charles in Goosport, was a world of its own, complete with an office, a two story boarding house, and numerous dwellings. The Lock, Moore and Company mill, located five-and-a-half miles southwest of downtown Lake Charles in Lockport, was also a self-contained community with an office, housing, a general merchandise store, etc.

National Register of Historic Places Continuation Sheet

Lake Charles Historic District, Calcasieu Parish, LA Section number _____8 Page ___3

Today there is absolutely nothing left of these complexes and hence nothing left to represent the lumber industry directly. For example, a Hilton occupies the site of the Bel mill. For this reason, a secondary resource, one that is a byproduct of lumber prosperity, is being nominated. It should also be noted that the nominated district is about all that remains in Lake Charles from the c.1885c.1915 boom period. The once grand central business district has been decimated, and a lumber baron of the "golden age" certainly would not recognize it. There were once impressive banks made wealthy by lumber, but they are gone. Lumbermen once entertained royally at the Majestic Hotel, but it too is gone.

Lake Charles' old residential neighborhood still survives to reflect the tremendous prosperity of the lumber boom years. It would not have developed as it did without lumber prosperity, and the district's many outstanding homes directly reflect that prosperity. Of course, it is the Queen Anne Revival and Colonial Revival styles that coincide chronologically with the lumber boom, and they are certainly the "up-market" houses in the district.

In addition to reflecting lumber boom prosperity in a general way, the district also contains various houses that are directly related to a particular lumberman. The following list is partial based upon research to date, although it accounts for the major examples.

Houses directly associated with lumbermen:

(1) R. H. Nason House, 705 Broad (#146)

Nason, the Michigan lumberman previously mentioned, built this eye-catching house in the 1880s. It is shown in an 1895 newspaper with the caption "Residence of R. H. Nason."

(2) W. E. Ramsey House, 626 Broad (#147)

Located at the same intersection as the Nason House, this huge residence was built by W. E. Ramsey, a Michigan timber baron, as previously mentioned. It is also pictured in the above mentioned 1895 newspaper and identified as his residence. The 1901 city directory shows Ramsey at this address and identifies him as president of Bradley-Ramsey Lumber, the largest of the concerns. Ramsey lived here until 1906. Although the house received a new gallery in about 1910, that is the only change it has received. The bulk of the original house survives as a link to the "Michigan men" phase of the Lake Charles lumber industry. The house is so distinctive that Mr. Ramsey would recognize it today, even with the new gallery.

National Register of Historic Places Continuation Sheet

Lake Charles Historic District, Calcasieu Parish, LA Section number 8 Page 4

> (3) Walter Goos House, 624 Ford (#306) Walter S. Goos, son of pioneer lumberman Daniel Goos, purchased this corner property in 1892. The Sanborn maps for 1898 and 1903 show a modest one story house there, with the present two story pile appearing on the 1909 map. The 1913, 1915, and 1917 city directories show him still at this address and identify him as the vice-president of Bel Lumber Company.

(4) Flanders House, 605 Mill (#51)

Local historians indicate that this "mansion" was built by one of the Bel brothers of Bel Lumber for Catherine Goos and Willie Flanders. (This makes sense when one considers that the Bel and Goos families were related by marriage.) In any event, Flanders is shown at this address in 1901 and identified as secretary-treasurer of J. A. Bel Lumber. He is still at this address in the 1913, 1915, and 1917 directories, although curiously no occupation is given.

(5) Samuel T. Woodring House, 742 Pujo (#169)

This peripteral style house was the home of Samuel T. Woodring, general manager of Calcasieu Longleaf Lumber Co.

(6) 903 Broad (#137)

The 1913 city directory identifies this as the home of G. T. Lock, assistant-general manager of Lock, Moore & Co.

(7) 929 Broad (#129)

The 1917 city directory identifies this as the home of Frederick G. Lock, vice-president of Lock, Moore & Co.

 (8) 530 Mill (#52) The 1915 city directory identifies this as the home of Ernest F.
 Bel, with J. A. Bel Lumber Co.

Architectural Significance

The Lake Charles Historic District is also of local architectural significance as one of the finest collections of historic buildings in the several parish region of southwestern Louisiana. It achieves this distinction because of its size, concentration, and the quality of various buildings.

Within the context of southwestern Louisiana, three cities stand out because of their noteworthy historic building stock--Crowley, Lake Charles, and Jennings. Although there are numerous other towns in the region with historic central business districts and residential areas, the building stock is largely lackluster and often significant in a given parish only in relationship to what

National Register of Historic Places Continuation Sheet

Lake Charles Historic District, Calcasieu Parish, LA Section number ______ Page _____

else is there. Of the three exceptions, Lake Charles is actually superior in some respects, as will be shown below. Crowley has a large Register district with a superb downtown, a rice mill corridor, and various landmark Victorian residences as its most significant components. Jennings does not have a sufficient concentration of significant buildings for a Register district, but it does have about twenty outstanding Queen Anne Revival homes scattered throughout the town, as well as a couple of Colonial Revival piles and a few noteworthy bungalows.

In addition to size and concentration (380 buildings with a 26% intrusion rate), the Lake Charles district is chiefly significant within southwestern Louisiana for the large number of first-rate landmarks in a variety of stylistic categories:

(1) The district has the finest collection of Queen Anne Revival residences in southwestern Louisiana. As was noted in Part 7, the Lake Charles examples are particularly elaborate in massing and detailing, including turrets; the widespread use of shingling; richly molded decorative vergeboards; the use of prominent sunburst and fan forms in gables, gablets, and brackets; and elaborate and varied gable peak ornamentation and bracketing. In comparison, the typical Queen Ann Revival house in the region is a one or one-and-a-half story conservatively styled cottage with a polygonal bay and perhaps some shingling and gable peak ornamentation. It is here that Lake Charles even outshines the impressive patrimony of Crowley and Jennings, in terms of quality and numbers. Lake Charles has more noteworthy examples, and they on the whole are more elaborate in massing and detailing.

Particularly outstanding Queen Anne houses in the district include #s 39, 40, 51, 69, 71, 83, 145, 146, 147, 181, 214, and 343.

(2) Lake Charles also has the most impressive Colonial Revival heritage in in the region. Whereas the norm is a cottage with a Colonial Revival gallery, Lake Charles has a couple dozen two story examples, often with colossal order pedimented porticos, and even its own vernacular interpretation of the style. Here again Lake Charles is more impressive than even Crowley and Jennings. (Jennings has a couple of two story Colonial Revival piles and Crowley about four or five).

(3) Lake Charles even has a handful of superior bungalows, even though the collection as a whole is generic, as indeed it tends to be in much of Louisiana. But still Lake Charles is conspicuous because it at least has some noteworthy bungalows, whereas houses of this type tend to be

١

4

National Register of Historic Places Continuation Sheet

Lake Charles Historic District, Calcasieu Parish, LA Section number $\underline{8}$ Page $\underline{6}$

exclusively run-of-the-mill in the various other communities and towns in the region. (Jennings, a notable exception, also has a handful of interesting bungalows.)

Outstanding bungalows in the district include #s 59, 154, 160, and 204.

(4) Finally, the twentieth century eclectic category includes some of the district's most striking landmarks. Like top-notch buildings in the other styles, many of these would be individually eligible for the Register. Historic styles revived include Georgian, Spanish Colonial, Renaissance, Gothic, Byzantine, and the French-looking neo-classicism of the Masonic Hall. There is no other town or city in the region with the number, range, and quality of twentieth century eclectic buildings found in Lake Charles.

BOUNDARY JUSTIFICATION

The boundaries were drawn to encompass the concentration of significant buildings noted in Part 8 -- i.e., those that are architecturally significant under Criterion C and those that represent the c.1885-c.1915 lumber boom prosperity of Lake Charles (Criterion A). Where this concentration ended, so ended the district.

Immediately to the north of the district (abutting Belden St.) is Interstate 10. To the west of the district is the largely modern downtown. To the northeast are residential neighborhoods characterized by a heavy concentration of non-historic buildings and very pedestrian 1920s and '30s houses that are neither architecturally significant nor reflective of the c.1885-c.1915 lumber boom. The area beyond Louisiana Avenue (southeastern section of the district) is characterized largely by modern buildings. To the south of the district are a few blocks of residential development from the 1920s, '30s and later. This area was examined very carefully by the National Register staff and was not included for a combination of reasons. There were too many non-historic buildings, virtually no architecturally significant buildings, and almost all of the housing stock postdated the lumber boom. In short, this area did not possess those qualities that made the district significant, per Part 8.

The district boundaries are irregular in places and cut in from the above basic parameters to exclude concentrations of non-contributing elements. This is particularly true to the west and in the southwestern corner, where the largely modern downtown and other modern development has encroached upon the district. The district boundaries also project beyond the basic core in a few instances to take in significant buildings (as per Part 8). For example, the "finger-like" projection encompassing #s 182-187 takes in two architecturally significant buildings--a turreted house and an Italianate house that is probably the oldest building in the district.
