STATEMENT OF SIGNIFICANCE

In our country's War of Independence, the alliance between France and the United States, undertaken on February 6, 1778, had given the patriots greater confidence in their ultimate success. The first movement of the French government, in compliance with the alliance's requirements, was to dispatch in May of 1778 a squadron consisting of twelve ships of the line and four large frigates, under command of Count d'Estaing, to blockade the British fleet in Delaware Bay. Fortunately for the commander in charge of the British fleet--Lord Howe-he had left the Delaware a few days before the arrival of d'Estaing on July 8 and had found safety in the waters of Raritan Bay, into which the heavy French vessels would not enter for fear of striking the sandbar stretching northward from Sandy Hook to Staten Island. D'Estaing therefore relinquished his design of attacking Howe's fleet and, on the solicitation of General Washington, proceeded to Newport to assist the Americans in their attempt to drive the British from Rhode Island. For this, General Sullivan had been sent to supercede General Spencer; and Washington had also dispatched La Fayette (accompanied by General Greene, then a quartermaster-general) with two continental regiments to aid in the Rhode Island expedition. John Hancock came at the head of the Massachusetts militia, and similar troops from Connecticut and Rhode Island also gathered at Tiverton.

Thus, with the arrival of the French fleet, which anchored off Brenton's Point on July 28, the scene was set for Rhode Island's largest conflict in the War of Independence: the Battle of Rhode Island. On July 29 two French frigates sailed up the Sakonnet Passage and caused the destruction of three British warships. On July 30, two French ships of the line sailed into the West Passage of Narragansett Bay and anchored abreast of Conanicut (Jamestown) Island, causing the British to abandon Conanicut Island and concentrate forces in Newport.

Valuable time was lost in petty disagreement between the Americans and Count d'Estaing over articles of command and various methods of attack. With a general lack of communications, the French fleet remained at anchor for several days. Then, on August 5, in the early morning, they got under sail to move around the north point of Conanicut Island. Upon seeing this movement, four large British frigates mounting

#### 8. Significance.

a total of 124 cannon, and including the "Cerberus" and the "Lark," were immediately destroyed to prevent their capture by the French ships. On August 9 the Americans landed in force on the north end of Aquidneck Island, and the French had meanwhile been bombarding Newport--encountering minor resistance from the batteries surrounding that place. It was during this day that Lord Howe's reinforced fleet appeared off Point Judith; and, upon seeing their approach, Count d'Estaing sailed out of Narragansett Bay to meet them. A furious storm arose before an angagement could start, and both fleets were disabled and scattered, remaining at sea for ten days until Howe turned back to New York and d'Estaing returned to Newport.

During this period General Sullivan had pushed on, notwithstanding the absence of the expected French troops. When d'Estaing arrived again off Newport on August 9, the Americans had advanced almost to Newport, with every promise of a successful siege. They had previously been promised four thousand land troops from the French fleet, but these were denied them, and--refusing to listen to entreaties or remonstrances--d'Estaing sailed for Boston and abandoned the Americans in their upcoming hattle. This lack of support caused an American withdrawal to the north end of the island, the British pursuing, and a severe engagement took place in the area of Quaker Hill on August 29. Sullivan then managed to repel the British, but when he heard that Sir Henry Clinton was soon to reinforce General Pigot at Newport with five thousand men, he decided to further remove his troops to Tiverton, and thus there was an unsuccessful end to the Battle of Rhode Island.

The only positive accomplishment of this battle, other than the courageous fighting on both sides, was the destruction of the British fleet stationed at Newport. Therefore, it is felt that the historically valuable wreck sites giving physical evidence of this happening should be recognized and afforded as much protection as possible from both state and federal government agencies, pending recovery operations and careful study of their findings. The importance of these sites is increased by the fact that the recovery of Revolutionary War vessels is extremely rare in New England waters, there being only one other such instance known to the writer. Plans are presently under way at the University of Rhode Island's Ocean Engineering Laboratory to retrieve and preserve artifacts from the sites, beginning in the summer of 1973. The work will be carried out with appropriate archaeological supervision.
