DESCRIPTION

The Vincentown Historic District, located within Southampton Township, contains roughly 200 properties. Of the 188 buildings in the district, 160 are contributing. Most of these contributing structures are 19th century (80%) although a few are late 18th century and early 20th century. Less than 8% of the buildings were constructed after 1930. The center of the village, especially Main Street, is dominated by simple, gabled, two-story homes. During the second half of the nineteenth century, at the height of Vincentown's prosperity, the village center also supported shops, taverns, a tannery, and grist and sawmills, all of which were integral to the commercial life of Southampton Township. At the periphery of the district, along Mill Street, are situated a number of homes representing popular nineteenth century building tastes. Federal, Greek Revival, Gothic, Queen Anne, Italianate, Shingle, and Bungalow styles are all represented. Vincentown has not undergone any major additions since the 1920s, and thus it exists today with a large amount of its original integrity intact.

The town is composed mainly of simple traditional structures which are harmoniously arranged along seven streets. The streets, each with their own particular function and character, are compactly arranged on the nearby dry upland terrain.

The town streets can each be identified as fitting one of three or four types and from these we can identify various zones of land use which developed over the years. The main business district in town was confined along Main Street south to just below Grange Street. This street contained a blend of residential, commercial, commercial-residential, and institutional buildings. We find a wider variation in scale and style here than on any of the other town streets. Sizes range from the one room shop at 47 Main Street (Inventory #4b) to the Methodist Church (Inventory #18). Buildings are also noticeably closer together and closer to the street than elsewhere in town, a function of increased land values in the prime commercial district. Geographically, the street is laid out on the uplands east of the creek and it follows the contour of the creek bank south and southeast.

The flood plain of the creek in the village district dictated another distinct zone of activity. For obvious reasons it was an area generally considered undesirable for most building purposes. The saw-and grist-mills, however, were constructed in this zone (Inventory #87 and 200) in order to make use of the stream's water power. The result is that a major green space has always existed near the center of the town focused on the stream and pond. The only major building activity in this area occurred along Mill Street, the major thoroughfare into town from the West. The section of Mill Street located within the flood plain had a special character of its own. It was an extension of the business district running from Main Street out to the gristmill, but unlike Main there were only small to medium size buildings which housed tradesmen's shops.

Section number 7 Page 2

The only exception to this is the Episcopal Church built on the bank of the creek in 1871.

At the gristmill site, Mill Street reaches the edge of the creek's flood plain. From here the street rises onto the upland west of the creek, which was from the earliest period of the town's development, considered the most desirable residential area in town. Ten houses are located along this part of Mill Street forming the western flank of and the principal entrance to the historic district. They range in date from late 18th to early 20th century and generally occupy large lots. The houses themselves are medium to large structures and all possess distinctive stylistic designs characteristic of their respective periods of origin: Federal, Italianate, Gothic, Queen Anne, Shingle and Bungalow designs are all represented. These houses, predictably, have been the residences of some of the town's most prosperous citizens.

A number of other streets in town represent yet another type of streetscape. Pleasant Street, Plum Street, Church Street, Red Lion Road (northern end) and the lower part of Main Street are all more typical residential streets generally containing small to medium sized houses. The predominant house type on these streets is some form of narrow and deep 2 to 2½ story structure situated close to the street and occupying a narrow, deep lot. In two cases, narrow alleys run parallel to the streets behind the house lots offering access to tables and other outbuildings.

Nearly all of the buildings which comprise the town are represented by only a few major types and trends which fit neatly into the plan and character of the settlement. Two main types, which are identified here simply as Types 1 and 2, predominate and form the vernacular or "common language" basis of the town's architecture.

Type 1 is the oldest of the two types and was probably the most common building type in the town prior to the mid 19th century. The main characteristics of this type are its 2 story elevation and one room deep plan with a simple gable roof with ridge parallel to the street. This format produces a building with distinctly tall and narrow (12 to 16 feet) gable end side walls. The front walls would always be at least as wide as the building's depth but would more typically be two to three times as wide. The floor plans of these basic structures could vary considerably depending on period of construction and use. Early plans are especially difficult to identify as changes in use and plan have obscured the original character of early buildings. Early structures of this type probably contained simple kitchen and parlor plans or just plain kitchen plans. This is a house type which survives through the 19th century and was commonly formalized into a 5-bay center hall type. This later form, however, is not found in the town plan. Because of the variations in plan the window/door

Section number 7 Page 3

Vincentown Historic District, Southampton
Township, Burlington County, NJ

or bay arrangement on the facade varies a great deal in the Type 1 and will be described individually in the inventory. (Examples found at 74 Main, Inventory #30; 148 Main, Inventory #65; 35 Mill, Inventory #95; and 36 Plum, Inventory #130).

The second major type, Type 2, represents in a general sense, a 90 degree rotation of the structure on the lot producing a building with a narrow street front and a standard two room depth. The roof line does not rotate, however, so that instead the gable span is lengthened to cover the long dimension. The obvious advantage of this plan is that in a town where space is at a premium, more buildings can be fitted along a street. A reasonable hypothesis regarding Vincentown's development is that Type 1 buildings, being the common traditional form, were freely used in the formative phase of development when there were few structures. Then, as the town grew and space became a more practical concern, the Type 2 "town house" was relied on more routinely. (Examples found at 67 Pleasant Street, Inventory #151; 156 Main Street, Inventory #67; 51 Plum Street, Inventory #123; and 29 Church Street, Inventory #142).

Another type of two room deep (also termed double pile) house which appears in the town in the early 19th century is the Type 2 double or duplex house. It is simply two Type 2 houses joined as one structure by a common party wall (Inventory #124-125; 55-57 Plum Street). This arrangement had the appeal of conserving construction materials as well as land and heating fuel.

Yet another double pile type is the classic full Georgian plan. This is a formal house influenced by Renaissance design and culture and intended for the wealthier citizens. It has a balanced 5 bay facade with center entrance and center hall with stair. The double rooms on one side usually served as a double parlor in the era that concerns us here. The other two rooms could serve as a library and a dining room or a dining room and a kitchen depending on the existence and use of additions to the structure. (Inventory #9 at 67 Main Street and #97 at 45 Mill Street). This type was most popular in the second quarter of the 19th century and typically employed brick construction with Federal style detailing, most notably, the double end bridged chimneys in the one or both of the gable ends. At the same time a sort of 3/5ths Georgian plan also became popular. This consists in plan of the full hallway with rooms on only one side which generates a 3 bay facade and side entrance. With respect to its massing, it is a type closely related to the basic Type 2 already identified, with the important distinction of having a decidedly more formal character as displayed in the segregated hallway plan (allowing passage through the house without entering the rooms) and the orderly 3 bay facade. Due to the approach of this inventory, in which only a few house interiors were actually investigated, the 3/5th Georgian or side hall house is classified as a Type 2 but with the "full 3 bay" distinction added to the type designation. This distinction serves as an

National Register of Historic Places
Continuation SheetSection number 7 Page 4Vincentown Historic District, Southampton
Township, Burlington County, NJ

indicator of the use of the Georgian plan type but only interior investigation can establish the true difference. (Inventory #100, 59 Mill and #102, 65 Mill Street).

One of the most individually significant works of architecture in the village is the John Woolston house at 53 & 57 Mill Street (Inventory #98-99). This structure was recorded in a set of measured drawings prepared by the Historic American Building Survey in the 1930's. It is an elaborate double house of one full Georgian house (5 bays) and a 3/5ths Georgian house. The result is an impressive symmetrical 8 bay facade with doors located in the third bays from either end. The house is constructed in brick and has double end bridged chimneys of the Federal style combined with simple Greek Revival woodwork detailing, a blend characteristic for the building's 1832 construction period.

By the third quarter of the 19th century desire for increased space coupled with an ability to pay for it introduced further developments in building design. One example is the full three story elevation which was used as a modification in both the full Georgian and 3/5ths Georgian houses. Together with greatly diminished roof slope visibility (made possible by the introduction of metal roofs) this form was closely associated with the Italianate or Bracket Style of the period. Good examples of the local interpretation of this style are found at 64 Mill Street (Inventory #107), an austere version with no superfluous woodwork decoration and at the head of Mill Street, 57 Main Street (Inventory #6) which exhibits rich carpenter ornamentation. A Type 2, 3 bay side hall (3/5th Georgian) example is located at 93 Main Street (Inventory #17) and a double version at 42-44 Main Street (Inventory #21-22).

Examples of various other late 19th century styles are also found in the town but on a very limited basis. The Second Empire is modestly represented by the Mansard roofed house at 177 Main Street (Inventory #50). An excellent Carpenter Gothic house at 75 Mill Street (Inventory #104) marks the western entrance to the town. Its neighbor at 71 Mill (Inventory #103) is a good example of a Shingle Style residence. The turn-of-the-century classic revival period is represented by a neo-Palladean house at 171 Main Street (Inventory #49). One of the later significant styles to appear was the Bungalow which produced 78 Mill Street (Inventory #109). A most wonderful and totally idiosyncratic Victorian structure is the Francis Lee House at 52 Pleasant Street (Inventory #166) where it looks out over Jade Creek. This is composed of a small 2½ story Gothic Cottage with numerous additions, porches, sun porches, balconies and sheds stretching out behind in a manner that defies description and analysis. All of these distinctive building designs contribute significantly to the character of the architecture of the town but represent a proportionately small group of buildings and were primarily the property of the wealthier citizens. Throughout

Township, Burlington County, NJ

the 19th century the basic Type 2 vernacular structure continued to be the most common building type.

In addition to the main building types presented thus far, there are a number of ancillary features found on the individual buildings which are noted as distinguishing features in the inventory descriptions and which need some brief analysis here. Chief among these are the additions which are nearly always found on the rear of the basic form. First, the term additions refers simply to the dependent structural nature of the building section. Determining when the additions occurred requires a degree of analysis not possible here. In general it seems that most house types had at least some type of shed roof addition off the back. Some remain this way while others went through stages of enlargement. Others, especially many built in the mid-19th century or later, were apparently constructed in one stage complete with 2½ story rear wings. The additions, whatever their history, conform, like the main houses, to a few basic forms. Most are either sheds or gable roofed wings. Their heights vary, limited only by the height and slope of the main roof. The main function of most additions is to house the kitchen. In this respect the additions to early basic structures, such as the Type 1 kitchen-parlor house already described, would have altered the house drastically allowing for the rearrangement and alteration of the early floor plans. In later houses, however, the significance of the addition is its contribution to the overall size of a particular building. That is, two buildings which are the same basic Type 2 structure may vary appreciatively in size depending on the type of addition. It should also be noted that the basic building types, i.e., the 1, 2 and Georgian, with their various additions can be read fairly clearly in the detailed configurations on the 1908 Sanborn map reproduced for this report.

Other building "parts" identified include the following:

1. Porches or entrance shelters.
2. Verandas. As distinguished from porches, these are open roofed areas, usually on the front or side of a house intended as an outdoor living space and date from the late 19th century on.
3. Bays or bay windows. These are projecting structures intended to "catch light" and generally date from the second half of the 19th century.
4. Eaves, or the projecting overhang at the lower end of the roof. These are often noted as only slightly projecting, modest or deep. In general, slight eaves are an indication of early (pre-1830) construction.

United States Department of the Interior
National Park Service

OCT 27 1987

National Register of Historic Places Continuation Sheet

Section number 7 Page 6

Vincentown Historic District, Southampton
Township, Burlington County, NJ

5. Raking, or the edge of a gabled roof. This is often noted as being flush with the wall or projecting beyond. Generally, flush raking is also a sign of an early structure (pre 1830).
6. Windows, in particular six over six (6/6) sash or 9/6, 4/4, 2/2, 1/1, 9/1, etc. These divisions serve as important design elements in what otherwise might be a very simple structure. They also give an indication of age. 6/6: most common type and occur in any period. Are most common early to mid-19th century, however. 9/6: rare and early (pre-1820). 4/4 and 2/2: these come into vogue as larger panes of glass get cheaper and are common in last half of the 19th century. 1/1: a continuation of the trend towards larger glass, these become common around 1900.
7. Brick bond. Different bond patterns are indicators of building period and building quality. Most commonly are Flemish bond used up to mid-19th century and especially of facades of fine buildings and American bond which is used throughout 19th century and quite commonly on side and rear walls.

It is important to note that all of these features are only general indicators of age, some are subject to alteration, and all must be evaluated as part of a total picture in order to get a sense of a building's age and evolution.

Institutional buildings such as churches and schools represent another important category of architecture in the town. These are a diverse group of buildings. Each possess distinctive characteristics of style and form which are intended to express its function and group identity. The 1853 Methodist Church, for example, possess common mid-19th century Methodist Church characteristics: a large, plain Meetinghouse form with gable end to the street, the main hall level one story above ground level, simple classical detailing, a plain bell cupola; these are the trademarks of American Methodism of the period. In a very similar way the Carpenter Gothic design of the 1871 Episcopal Church expresses the interest in medieval christianity and its art and architecture which was common in that era. The 1922 library, on the other hand, expresses the popular Georgian Revival style commonly used in civic buildings of the first quarter of the 20th century. Its cameo scale reflects the size of the community and fits neatly into Main Street. The most enigmatic of the town institutional buildings is the Old Town Hall/Masons Lodge built in 1884 (Inventory #114). Its inconspicuous location on a back street and its plain exterior suggests a desire for anonymity that is not typical of either town halls or Masonic Lodges. It possesses strong integrity as a 19th century building and, together with the Methodist Cemetery behind it, makes a strong contribution to the historic character of the town.

INVENTORY KEY

Significance within Historic District:

- K - Key buildings, those having special individual value to the district.
- C - Contributing buildings, those composing the majority of buildings in the district. A minus (-) denotes historically inappropriate changes which are visible from the public right-of-way. A plus (+) denotes especially well preserved and maintained structures.
- NC - Non contributing, those buildings that, due to age or appearance, do not contribute to the historic character of the district.

Dates:

Centuries:

18thc	Eighteenth century	1700-1799
19thc	Nineteenth century	1800-1899
20thc	Twentieth century	1900-present

Condition:

- E - Excellent: No visible repairwork needed
- G - Good: Need for general maintenance.
- F - Fair: In need of more than routine maintenance.
- P - Poor: In need of major repairs.

Use:

- R - Residential
- C - Commercial
- C/R - Commercial first level, Residential above

HISTORIC PRESERVATION SECTION
STREETSCAPE SURVEY FORM

HISTORIC SITES INVENTORY NO. 0333-5

STREET NAME: Main Street
MUNICIPALITY: Southampton

CROSS STREETS: From Grange and Race South
COUNTY: Burlington

DESCRIPTION/SIGNIFICANCE: This lower section of Main Street constitutes the southern part of the village district and traditionally was the entrance to town from the Pines from which logs, cranberries, and other products were hauled for processing and shipment at the rail head. Like the upper portion of Main Street, buildings here are typically 2½ story frame with some brick, situated up to the sidewalks and close together. Most of these buildings, however, are residential in use with the exception of the north end below Grange Street where the original Friend's Meeting House (now the Grange Hall) and lumber yard are located. The main key visual features of the street derive from 1.) the general homogeneity of building types and placement and 2.) the 45 degree bend in the street, occurring between Grange and Pleasant Streets. The street is lined with hardwood trees.

APPROXIMATE NUMBER OF BUILDINGS: 37

PHYSICAL CONDITION OF BUILDINGS: Excellent 25 % Good 50 % Fair 25 % Poor %

REGISTER ELIGIBILITY: Yes Possible No Part of Larger District X

THREATS TO STREET: Roads Development X Zoning Deterioration No Threat Other

COMMENTS:

Newer housing has been added along Main below the district which in general is visually compatible. The stream to the west and southwest offers a protective belt. But land to the east will be subject eventually to new construction which will relate to and affect the district in some way. (Block 1202 #6)

HISTORIC SITES INVENTORY NO. 0333-5

STREET NAME: Main Street
MUNICIPALITY: Southampton

CROSS STREETS: South to Race and Grange
COUNTY: Burlington

DESCRIPTION/SIGNIFICANCE: This streetscape constitutes the central section of the village and includes most of what was the commercial core. Most of the structures are medium to large in size and are, with a few exceptions, quite plain in appearance. Nearly all fit into the basic structural types 1 & 2 and are compactly fitted along the street, close to each other and the sidewalks. Nearly all the buildings date from before 1900. Many are late 18th century to early 1800's types. This nearly intact 19th century streetscape with its 2½ story structures tightly grouped constitutes a highly integral district core despite certain unfortunate individual building treatments. Key visual structures on the street are the Baptist Church at the north end, the Methodist Church at the south end and the Haines House at the head of Mill Street, a large, ornate Italianate mansion.

APPROXIMATE NUMBER OF BUILDINGS: 37
PHYSICAL CONDITION OF BUILDINGS: Excellent 25 % Good 25 % Fair 25 % Poor 25 %
REGISTER ELIGIBILITY: Yes Possible No Part of Larger District X

11	75-77 Main St. Block 1009, Lot 1	19th & 20th c	C-	P	R/C	

DESCRIPTION: Style, Ext. Wall Fabric, Fenestration, Form, Roof, Major Features, Alterations, Stories, etc.

A classic late Federal 5 bay 2½ story double pile brick house with a rear 2 story frame shed and full Italianate type front veranda. Flemish bond brick on front. Other details include the double end bridged chimneys, 2 bow roofed dormers with pilasters, a semicircular fan light and decorative scroll work spandrels on compound porch columns.

Large 7 bay double pile, 2½ story frame structure with large 1 story wing off rear. Plain exterior with flush raking and slightly boxed eaves and 6/6 windows. 1st floor front has been modified for use as a Post Office.

Remnant structure reworked after extensive fire in 1920's. Originally the upper tavern one story brick and frame sections in front with stores. 2 story frame section extends off rear.

MAP #	ADDRESS/LOCATION : PROPERTY NAME	DATE	Grading G/C	Condition	USE	DESCRIPTION: Style, Ext. Wall Fabric, Fenestration, Form, Roof, Major Features, Alterations, Storeys, etc.	NEGATIVE FILE #
20	38 Main St. Block 1004, Lot 1	c1870	C+	G	R	A full 5 bay, center hall, 3 story frame Bracketed Italianate type. Moderate scroll work detailing on full front veranda and at eaves. 6/6 windows with shutters and blinds.	
21/22	42-44 Main St. Block 1004, Lots 2 & 3	c1870	C+	G	R	Large double side hall structure with full 3 story elevation. Flat roof with deep eaves and small brackets is an Italianate feature. Full 6 bay front veranda. 2/2 windows, some with original shutters.	
23	Main St./Heritage Bank Block 1003, Lot 8	c1865	C-	G	C	Full 3 story 5 bay center hall brick structure. Now with aluminum siding this structure originally had simple Italianate detailing, including a front portico with 2nd floor balcony, and a stuccoed and scored exterior. Structurally intact, but with poorly altered exterior.	
24	Block 1003, Lot 9					Parking area for bank. Originally the site of a store.	
25	56 Main St./Jim's Town Tavern (originally known as the Lower Tavern) Block 1003, Lot 10	c1830	C-	G	C	2½ story 5 bay center hall brick structure with brick cornice. Large one story addition has been added on front which is intrusive (no windows, "Mediterranean door", etc.) and back and sides have been aluminum sided. However, main structure is intact and building continues in tavern use now for over 150 years.	
26	58 Main St. Block 1003, Lot 11	e. 19th c.	C	G	R	Type 1 frame structure which abuts the tavern on north side. Has flush raking, 2 roof dormers and full front screened porch. Five bay front is divided into a 3 bay side entrance and a two bay side entrance house. Original windows were 6/6.

Type 2 three bay frame house with side hall on left and a one bay 2 story extension on left side. Detailing includes flush raking, beaded siding, 6/6 windows with shutters and blinds and a 2 bay veranda on front with turned posts.

An atypical type 2 Federal style brick structure. 4 bays in front with door in 3rd bay from left. Originally there was probably a door in second bay and structure was a duplex design. Detailing included double end bridged chimneys, flush raking, brick cornice, Flemish bond facade, stuccoed and scored sides, 6/6 windows and fan light over door.

Double type 2 frame structure now a single house 4 bays on second floor and 1st floor altered. 6/6 windows original.

Originally this was probably built as a 2 bay/3 bay type 2 duplex. Frame structure with full veranda on front. Entrance now between 2nd and 3rd bays from left. Windows are altered.

STREETSCAPE SURVEY FORM

HISTORIC SITES INVENTORY NO. 0333-5

STREET NAME: Mill Street

CROSS STREETS: East Landing to Alley East of Red

MUNICIPALITY: Southampton

COUNTY: Burlington

Lion

DESCRIPTION/SIGNIFICANCE:

This street is the western entrance into the village and constitutes the affluent "hill" section of the settlement, being situated on the uplands west of the stream basin. All buildings are residential and vary in size from large to very large. Construction dates range from c1790 to c1910 and styles include fine examples of Late-Federal, Italianate, Gothic, Colonial Revival, Shingle and Bungalow as well as some characteristic vernacular types. All these buildings have a high degree of integrity and represent an outstanding selection of American residential building types. Most are set back about 30 feet or more. Street is lined with various types of trees.

HISTORIC SITES INVENTORY NO. 0333-5

STREET NAME: Mill Street
MUNICIPALITY: Southampton

CROSS STREETS: Alley east of Red Lion to Main
COUNTY: Burlington

DESCRIPTION/SIGNIFICANCE:

This streetscape constitutes the "mill section" of Mill Street. The principal structure on the street originally was the gristmill which no longer stands. Located near the center of the village, the street was also occupied by numerous small shops and service buildings, most of which are currently residential. Most buildings are small to medium sized frame structures situated close to the street. Noteworthy buildings include the "telephone company," the gas station (formerly the black smith), mill workers housing, and the Protestant Episcopal Church. Key visual features are the stream and mill race crossings, the Church and the Haines Mansion at the head of the street on Main. Few trees remain along this section of the street.

109 WEST STATE STREET, TRENTON, NEW JERSEY 08625 (609) 292 - 2023

SITING, BOUNDARY DESCRIPTION, AND RELATED STRUCTURES:

Situated on north side of Mill Street west of Rancocas Creek.

SURROUNDING ENVIRONMENT: Urban Suburban Scattered Buildings
Open Space Woodland Residential Agricultural Village
Industrial Downtown Commerical Highway Commercial Other

SIGNIFICANCE:

This structure is significant architecturally and socially. It has served as the home of one of Vincentown's three churches since its construction. Stylistically it represents the popular Gothic ecclesiastical style of the 1870's and is typical of small town Episcopal churches. It is well preserved and has integrity of setting. The aluminum siding is an unfortunate change, but at least reflects the original board and batten siding.

105	Mill St. Block 903, Lot 19					Vacant lot which is part of a large tract of land running back along creek. Originally part of the grist mill tract (see nos. 87 and 106)	
106	52 Mill St. Block 903, Lot 18	c1790 &c1880	Key	G	R	Large structure situated on high ground overlooking creek. Original portion of house is 2½ stories, 5 bays, center door facing west. Victorian modifications include 3 story tower on SE corner. Palladian window in South gable end 3rd, and a veranda wrapping south and east sides. Interiors include a very fine late 18th central hall and stair case and double parlors with Colonial Revival detailing. Originally this was the mill owners house (see no. 87). See form 0333-106 for additional information.	
107	64 Mill St. Block 903, Lot 11A	c1860	Key	F	R	Large full 3 story 5 bay villa form with deep projecting eaves and full front veranda. Frame with clap board exterior, originally a farm house; remains of barn and outbuilding are located behind and land still attached runs north to creek. See form 0333-107 for additional information.	
108	70 Mill St. Block 903, Lot 17	c1900	C	E	R	Square 2½ story hipped roof, frame house with front veranda. Clap board exterior and 1/1 windows. Sun porch on west side with plate glass.	
109	78 Mill St. Block 903, Lot 16	c1910	C	E	R	One ½ story bungalow type.	

HISTORIC NAME: Burr House
LOCATION: Mill Street

COMMON NAME:
BLOCK/LOT Map # 105

MUNICIPALITY: Southampton

COUNTY: Burlington

USGS QUAD:

UTM REFERENCES:

OWNER/ADDRESS:

Zone/Easting/Northing

DESCRIPTION

Construction Date: c1790 and late 19thc

Source of Date: owner and style

Architect:

Builder:

Style: Georgian vernacular and Queen Anne revival

Form/Plan Type: 5 bay double pile, center hall plan.

Number of Stories: 2½

Foundation: Brick with stone below grade

Exterior Wall Fabric: Clapboard

Fenestration: 1/1 windows replacing 6/6

Roof/Chimneys: Gable

Additional Architectural Description: Distinguishing late 19th century features added to a large simple Georgian structure include a 3 story tower on S.E. corner and a large veranda wrapping the south and west sides. Interior includes an original late Georgian center hall and main staircase with Georgian revival fire places and trim in double parlors. Kitchen originally was in N.W. room which is now the dining room. Large hearth support remains in basement.

PHOTO

Negative File No.

Map (Indicate North)

STATUS, BOUNDARY DESCRIPTION, AND RELATED STRUCTURES:

Situated back from street about 150 feet. Has a few small frame out buildings remaining. Also, site contains remnants of family elaborate Victorian landscaping including a fountain and plantings.

SURROUNDING ENVIRONMENT: Urban Suburban Scattered Buildings
Open Space Woodland Residential Agricultural Village
Industrial Downtown Commercial Highway Commercial Other

SIGNIFICANCE:

This structure predates the development of Mill Street. Its Victorian type siting away from street was actually due to its orientation to the old Jacksonville Road, now just the driveway to the house. The house was built by the Burr family who operated the various sawmills and gristmill located nearby on the Rancocas.

ORIGINAL USE: Residence PRESENT USE: Same
PHYSICAL CONDITION: Excellent Good Fair Poor
REGISTER ELIGIBILITY: Yes Possible No Part of District
THREATS TO SITE: Roads Development Zoning Deterioration
No Threat Other

COMMENTS:

Large tract of land directly behind house and once part of property now held for development.

STREET NAME: Plumb Street

CROSS STREETS: Grange Street to Church Street

MUNICIPALITY: Southampton

COUNTY: Burlington

DESCRIPTION/SIGNIFICANCE:

This is a narrow back street running parallel to Main. Building types and uses and overall streetscape arrangement are varied. The west side includes a row of five residential structures in the middle of the block while the remainder is largely occupied by the back ends of Main Street lots, some having early outbuildings and barns close to the street. The east side of the street is primarily occupied by residences which are typically type two structures and are situated about 15' from curb. A key structure on the street is the 1884 town hall and masons lodge on the east side towards the north. Mature trees are rare, but new trees have been planted.

STREET NAME: Pleasant Street
MUNICIPALITY: Southampton

CROSS STREETS: Church to Main Street
COUNTY: Burlington

DESCRIPTION/SIGNIFICANCE:

This is a narrow back street, primarily residential, forming the eastern side of the village district. Most early houses were laid out along the west side of the street and are nearly all type two (single and double) frame structures situated six to ten feet from the curb. A gap in this row, originally occupied by a mid 19th century school, is now used for parking with a large garage to the rear. On the east side of the street are a few 19th century houses, most notably the Francis Lee House overlooking the creek to the north. The 1920's elementary school is situated mid-way on the east side of the street with the new 1963 elementary school behind it. The street is lined with large hardwood trees.

163	15 Pleasant St. Block 1010, Lot 4	1.19thc	C	F	R	Large type 2, 3 bay structure with a 2 bay 2½ story, gable end, front wing which creates a Victorian asymmetrical form. Veranda wraps front of projecting wing and left side to entrance and has scroll work spandrels. Windows are 2/2. Projecting eaves and raking are open.	
164	7 Pleasant St. Block 1010, Lot 5	m.20thc	NC	G	R	1½ story gable end brick house with long wall dormers.	
165	3 Pleasant St. Block 1010, Lot 8	3/4 20thc	NC	E	R	1½ story gable roofed frame house.	
166a	52 Pleasant St. Block 1005, Lot 14	c1860 & addition	Key	G	R	Large multi-sectioned frame house. Front main section is a 2½ story 3 bay Gothic cottage type with center gable and full front veranda. Entrance is in right bay (side). Large 2½ to 3 story additions extend off rear of house.	
166b	52 Pleasant St. Block 1005, Lot 14	1.19thc	C			Barn to above. L shaped 2 story frame structure with vertical siding and cedar shake roof. Situated on back of property.	
167	Pleasant St. Block 1005, Lot 15	c1925	C	G	E	Large 2½ story hipped roof structure with two hipped wings at either end projecting about 10 feet. Long central section is broken into 3 major bays articulated by slightly projecting brick piers with windows and a gabled end coping above eave line. Main bays contain bands or groups of 4 windows each. Brick pier motif is repeated at entrances on either flanking wing. Small octagonal cupola located on center of roof. Geometric brick patterning is used above doors and at top of piers. Wings have been added to rear. School replaced mid-19thc frame school which stood across Pleasant Street (lot #158). Also, 1963 1 story brick school built outside district directly behind.

STREET NAME: Red Lion Road
MUNICIPALITY: Southampton

CROSS STREETS: Mill Street
COUNTY: Burlington

DESCRIPTION/SIGNIFICANCE:

This street contains residential development on the edge of the district laid out along the main early road leading due south to Red Lion, Tabernacle, Atsion, etc. Early building lots (pre 1900) were laid out along the east side of the street and contain a series of mostly type two residential structures. Buildings are closely spaced and have small front yards. One late 19th century house stands along the west side midway and is accompanied by three relatively new houses. Lots 197, 198, and 202 on the historic map remain open farmed land.

APPROXIMATE NUMBER OF BUILDINGS: 17

PHYSICAL CONDITION OF BUILDINGS: Excellent 30 % Good 50 % Fair 20 % Poor %

REGISTER ELIGIBILITY: Yes Possible No Part of Larger District X

THREATS TO STREET: Roads Development X Zoning Deterioration No Threat Other

COMMENTS:

Large tract of land to west is a farm, forming a clean and dramatic definition to the village. Any future development of this property should be evaluated for its relationship to the village district in terms of visual impact as well as use, traffic, etc.

Statement of Significance (in one paragraph)

SIGNIFICANCE

The architectural diversity of Vincentown, in conjunction with its position as a commercial center within agrarian Southampton Township, render it historically significant. The village not only provided for the variety of needs which its inhabitants possessed, but also for the needs of those in surrounding areas. Commerce, religious and fraternal organizations, and industry all co-existed within Vincentown; as well, a wide range of popular nineteenth century domestic architectural styles were utilized in the construction of village homes. Vincentown, the traditional social and economic center of Southampton Township, constitutes a well preserved historic district of roughly 200 structures. The origins of the settlement date back over 240 years and most of the development, from about 1800 through the early part of this century, is clearly evidenced in the architecture seen there today. In addition to the buildings and the families housed within them there are the institutions, churches, and businesses, that are all part of the town's cultural continuum. Vincentown is a cohesive community made up roughly two hundred separate structures intended to serve as the residences and work places of about 700 people. It was designed and built by unknown scores of individuals over a period of more than 175 years. It represents and speaks of a culture complete with social structure, economy, technology and values.

Vincentown developed as the service center for the surrounding agrarian environs in Southampton Township. The land is part of the geographic region known as the coastal plain which includes all of southern New Jersey and extends from Long Island to Florida. It is a region of low-lying alluvial soils touching on tidal streams and originally occurred with both hard and soft wood forests. The most dramatic geological feature of the area, and the one which has had great influence on the area's history, is the nature of the soil. The delineation between the sub-regions of the Inner and Outer Coastal Plains runs through Southampton Township. Although the geological and topographical character is basically the same in both sub-regions, differences in soil chemistry could not be greater with the Outer Plain generally having an acid soil and the Inner Plain having an alkaline soil. The result has been two entirely different systems of land use. The Pinelands (also known as the Pine Barrens, the Pines, etc.), which basically occupy the Outer Coastal Plain, have supported various industries since the mid 18th century, the most notable being lumber and bog iron production. In the late 19th century cranberry agriculture became the dominant land use in the Burlington County Pines region; a use which continues today. All of the various Pines activities, however, tended to support only a relatively small population.

Vincentown Historic District, Southampton
Township, Burlington County, NJ

As a result towns along the edge of the Pines served areas more distant than was the case in the more populated and developed conventional agricultural belt of the Inner Coastal Plain. The shape of Southampton in relation to Vincentown's location reflects this service distribution area with the greatest distance to the township boundaries from the town lying to the east in the Pines. Historically, the service area extended even further into the Pines than the present township boundaries indicate, with certain services probably not being available east of Vincentown until one reached the coastal communities some thirty miles distant.

Within the farm belt, the service area for Vincentown was much more closely defined as towns of similar size such as Pemberton, Medford and Lumberton lay within only four miles as did Mount Holly which was a much larger multi-township service center which provided still a wider range of services. As a service center, then, Vincentown might be classified as a fourth order center participating in the extended matrix which included the first order regional/national center of Philadelphia, the second order New Jersey centers of Trenton and Camden; the third order county centers of Burlington and Mount Holly; and fifth orders neighborhood centers such as Budd Town and Red Lion located elsewhere in the township. The stratification of services found in each of these centers was essentially a function of frequency of use. The more frequently a service was needed the less time could be spent in travel to obtain it, the more localized it became. Vincentown, which lay within an hour or two of most of the population it served, developed those services which were commonly needed on a weekly or at least monthly basis. This travel time was based on the horse however, which is why the commercial base of the town has been subject to substantial change since the automobile.

A list of residents and their occupations made in 1913 (Farm Journal Farm Directory, 1913) offers a good sense of the extent of services and related professions in Vincentown just before the "auto age" had its major impact.

This list probably only represents about half of the working population at the time, but it is a good representation of the type of activities in which the townspeople were engaged in this period. It is important to realize, however, that this stands as the late period in the town's development; the town did not

simply appear in this form, but emerged gradually over a century and a half. Like many towns, Vincentown's growth and development corresponds to the evolution of this country's economy and technology. Briefly, consider the historical depth of the settlement, how it was first established, what factors contributed to its growth and the profile of its development.

Southampton lies within what early settlers referred to as "the forks of the Rancocas," that is, the north and south to southwest branches of the Rancocas Creek. This territory was also called Coaxen for the Indian tribe that inhabited the land until well into the period of European settlement. Unlike the more immediately accessible lands along the Delaware River and lower Rancocas, parts of this area were not "taken up" by the West Jersey Proprietors until about 1740. It was in that year John Wills, son of one of the original proprietors, Daniel, acquired a 624 acre tract in the area west of Vincentown.

The Wills acquisition is especially notable because of the subsequent conveyance the same year of 242 acres of the tract to members of the Coaxen tribe for a mere four shillings (about \$4). The land, which lay about 1½ miles west of Vincentown, was conveyed to Teannis and Moonis, brothers of the deceased King Opollonwhen, and their descendants "so long as the water runs in the river Delaware and Rancocas River" (Secretarys Deeds, Book EF p. 76). This attempt to include the natives in the agrarian development of the land was characteristically Quaker in approach and formed part of the emerging environment in which Vincentown was established in the second half of the 18th century.

The origins and character of most of the development of the town and surrounding land remains obscure and hidden in numerous books of deeds and wills. That most of the good farm land was under development by the end of the 18th century seems apparent based on the number of houses of that period spread throughout the area. The rapidity with which this development occurred resulted from the growth in the lumber industry during the 18th century and improvements in agricultural technology and trade. The small backwater subsistence farms of the early part of the century gave way to a prosperous and productive farm belt engaged in producing for the growing urban markets along the Delaware. As this began to take shape, Vincentown was established to serve the needs of the surrounding area.

The origins of the name of the town date to 1743 when Vincent Leeds purchased land east of the Rancocas and south of Jade Run; or most of the land on which the town was built (Libra L p. 127: New Jersey State Archives; Dept. of State). It is possible that some type of inn or store was established about that time but no hard evidence for this is currently available. It is also possible that in this formative period Quaker Meetings began to be held in a house in town. By 1781 land was acquired at what is now the southeast corner of Grange

and Main Streets for a permanent Meeting House. The settlement itself was even referred to in the 18th century as Quakertown, a designation that indicates more than average devotion in a region that was dominated by Quakerism at the time. The only other major activity near the town at this time was Burr's sawmill which originally was situated just above the town on the Rancocas. Architecturally, there are some 22 structures in the town today which could date from the town's early period (anywhere from the mid-18th century to about 1820) and these are nearly all located on Main Street from Mill to the area near Grange. Whatever the exact composition of the town was in this period it is certain that the range of services was very Spartan compared to what later developed in the 19th century. By the early 1830's, however, many of the important institutions had made their appearance and the town began to take on "modern" dimensions. Gordon's Gazette of 1834 reported that Vincentown contained...

"a gristmill, sawmill, two taverns, four stores and from 30 to 40 dwellings, a Quaker Meeting House and a house of public workshop free to all denominations; surrounded by a fine fertile country".

Ten years later Barber and Howe described the village as being...

... "compactly built, principally on a single street of which the annexed view, taken near the store of R.H. Woolston, is a representation. It contains four stores, a grist, saw and turning mill, an extensive tannery, a select school, a Baptist church, a Methodist Church and a Friends Meeting, 90 dwelling and about 600 residents".

In both of these descriptions we find the four major components which characterize the more fully developed town; stores, churches, taverns, and agricultural processing industries (i.e. the gristmill, sawmill, and tannery). These constitute the main categories of area-related services found in an Agricultural community.

The grist and sawmill activities were apparently introduced to the village by the Burr family in the first two decades of the 19th century. The Burr mansion built c. 1790 remains today, complete with Victorian modifications, on Mill Street (Inventory #106). The grist mill stood on Mill Street where the mill race and foundations can still be seen (Inventory #106). The sawmill was located on the east bank of the creek just north of Race Street (Inventory #200). The pond created to supply these operations with water power remains forming an important environmental feature of the town. The eight foot of head created by the dam provided a reported net 70 horse power to the gristmill and 15 to the sawmill (Vermule, 1891). Both of these industries continued to operate into the

Township, Burlington County, NJ

20th century up to which time they remained the town's main production facilities.

The tannery was apparently located on the south side of Mill Street near the gristmill (Inventory #92-95). Established about 1830, the Barber and Howe description stated it had become an extensive operation by 1844. Shoe and boot makers reportedly worked and lived nearby as well (Woodward, 1883). These activities were no longer present by the late 19th century. The tanning industry, which depended on the availability of certain types of bark for the chemical treatment of leather, declined in the late 19th century following the major commercial lumber and tanning industry in northern Pennsylvania and westward.

The stores in Vincentown, and there were at least three or four during most of the 19th century, were the outlets of most consumer goods brought in from outside. There are no available descriptions of who specialized in what, and in general, there was probably a fair amount of change in ownership and location from one generation to the next. Architecturally, these stores would have occupied the ground floor of a 2½ story house or a special one story store structure. According to Woodward, the first store stood opposite the gristmill and was later converted to use as a house. This may well be the house standing at 39 Mill Street today (Inventory #96). All other stores, however, were subsequently located on Main Street. Of these, the two major sites were opposite each other on Main just below Mill. The site on the east side (Inventory #7) has remained in continuous operation as a store location from before 1800 to the present although the structure now standing is only a few decades old. This store was operated for much of the 19th century by the Butterworths who owned the residence next door to the south (Inventory #8). The store opposite, on the site between the bank (Inventory #23) and the lower tavern (Inventory #25), was built about 1834 and was operated in the third quarter of the 19th century by partners Buzby and Woolman. During their tenure these two men built the large three story double house on the northwest corner of Main and Mill for their residences (Inventory #21 and 22).

The inns or taverns in town were located only a couple of doors away from each other on opposite sides of Main. Traditionally, they were designated the upper and lower taverns in reference to their respective positions on the sloping terrain. The upper tavern was a large 2½ story frame structure built in stages beginning in the first quarter of the 1800's (Inventory #11). It continued operating until the 1920's when a fire destroyed major portions of the structure. Today, only a small salvaged section survives. The lower tavern built in 1831 is still operating today as a tavern (Inventory #25). This is a full Georgian plan brick building that replaced an earlier frame tavern which stood on the lot to the north.

The fourth major component of the town's structure was the social organizations, both the religious and fraternal. The development of these institutions in Vincentown seems characteristic of the region and offers important documentation on the evolution of the community, its culture, and services.

The first religious organization active in Vincentown, as previously noted, was the Quaker Meeting. By 1781 the Society of Friends had acquired the lot bounded by Main, Pleasant and Grange Streets. A log meeting house was erected on the corner of Grange and Main with the grave yard located directly to the east where it remains today. The meeting house was replaced with a one story brick structure about 1812. This structure remained in use throughout the 19th century. On maps dating to the third quarter of the 19th century, the structure is designated the HFMH (Hicksite Friends Meeting House) indicating that it was "taken over" by the Hicksite Quakers after the schism. The orthodox Friends may have met during these years in a house erected elsewhere on the property. Quakerism, both Hicksite and Orthodox, was declining throughout the 19th century however, and in 1911 the brick meeting house was sold to the Vincentown Grange which substantially enlarged it, adding a second story. Subsequently there has been no Friends meeting in Vincentown.

According to tradition, the second meeting house to appear in Vincentown was carried there in the late 18th century from the farm of the Coaxens where it had been erected by John Brainerd, the famous Presbyterian missionary. It seems that Brainerd's attempts to convert the "heathen" had met with a vague response. So the citizens of Vincentown took the effort to drag the structure 1½ miles down Church Road and place it on a site just north of the bridge on Main Street where it was used as a "free meeting", available to Christian denominations, except Catholics (Woodward, 1883). It remained there until 1837, when it was moved to a site outside of town where it was later destroyed by fire (Mount Holly Herald, 1832). By the time the free meeting house was removed, the Methodist Episcopalians and Baptists, who had the main use of the structure, had recently acquired land in town and constructed their own churches. These two religions began developing a strong following in the area in the late 18th century. Methodism was especially successful throughout South Jersey in appealing to the indigenous Quaker population. Based on the churches they constructed between 1830 and 1854 both of these religions had congregations that were much larger than the remaining Quakers.

In 1830 the Methodists purchased land between Pleasant and Plum Streets where they built a frame church and established their cemetery. By 1854 they needed a larger building and so they purchased land on Main Street and erected the large two story brick church which remains in use today (Inventory #18).

The Vincentown Baptist Church was formally organized in 1834, and in 1835 they constructed the church at the corner of Main and Church which stands today. The tower and main facade details of this church were probably added about 25 to 40 years later (Inventory #2).

The fourth and final addition to the town's religious institutions was the Protestant Episcopal Church which arrived in the late 19th century. This church was built on Mill Street in 1871 along the west bank of the creek. By this time, the tannery had ceased operation and the creek neighborhood area was considered an acceptable location for a church. The lot itself had its problems, being located within the creek's flood plain. However, the romantic medieval revival spirit, which inspired the Gothic design, deemed the creek bank setting an appropriately scenic environment rather than a liability (Inventory #85).

The other major category of social institutions was the fraternal organizations. The principal organizations active in Vincentown were the Order of Free and Accepted Masons, the Junior Order of United American Mechanics, the Grange, and the Vincent Fire Company. All of these groups were established a century or more ago and all continue in operation today.

Central Lodge 44 of the Order of Free and Accepted Masons was formed from the membership of the Mount Holly Lodge in 1856 as a result of an internal schism. In 1863 Lodge 44 acquired property on Plum Street in Vincentown where they occupied a building referred to as Progressive Hall (Mount Holly Herald, nd. - c. 1931; Burlington County Library file on Vincentown). The spelling of this street on some maps of the period as Plumb rather than Plum, suggests the interesting possibility that the name was given by the Masons in reference to their symbol for truth, the Mason's plumb bob. More research needs to be done on the development of this part of the town and especially the companion building to Progressive Hall, identified as Friendship Hall on the 1876 map. In 1884 the arrangement of these buildings was altered when the Masons and the township government collaborated on building a new brick structure on the site of Progressive Hall which contained the town meeting hall on the ground floor and the Masons Lodge on the second, (Inventory #114). The building continues in use by the Masons today, but the townhall functions have been relocated to the 1982 building on Route 206.

The Vincent Fire Company was first formed in 1850 and continues to serve the Vincentown community both as a fire fighting organization and a social institution. Its equipment has been located in at least four different structures. The first building on the Meeting House property and the second building on Plum Street are both gone. The third, built in 1914 on Main Street, is still existing but no longer used for its original purpose (Inventory #35). Located on ground previously reserved for unloading and rolling logs downhill to

the sawmill which stood directly behind, this 1914 brick structure offered the fire company everything it needed including a cupola for the fire bell and a second floor for the meeting hall which by 1922 received the addition of a pool table (Robert Reasoner, 1970). By 1974, however, the acquisition of newer and larger equipment necessitated the construction of the most recent firehouse located on Race Street (Inventory #207). The 1914 house is now used for various township purposes.

The Junior Order of United American Mechanics established their Vincentown Chapter in 1870. Their offices and Meeting Hall are located in a two story brick building on Main Street (Inventory #31). As the organization's name implies, it is a fraternity of skilled tradesmen. Although their visibility has waned in this century the organization played a prominent social and political role in many 19th century communities.

The Grange organization at Vincentown first appeared in 1874 but remained relatively dormant until 1907 when it was reorganized and became quite active as an agricultural society. In 1911 the Grange acquired the old Friend's Meeting House, and five years later they remodeled the 1813 brick structure and added the second story (Inventory #37).

The overall picture of development in Vincentown which emerges from tracing the establishment and growth of its businesses and institutions is one of fairly steady growth throughout the 19th century. It was more rapid in the years around 1820 to 1835. By 1865 all the major features existed and afterwards the town enjoyed a stable prosperity into the 20th century. This later period (c. 1865 to c. 1915) could well be called the railroad era for the town, as the single most influential force on economics and communication for the town was the availability of a dependable transportation line between Vincentown and the rest of the country. It is difficult for us to appreciate the dynamic changes made possible by rail transit in the 19th century in terms of the individual's access to the outside (people could now commute daily to other towns to work) and in terms of shipping capabilities for various products. In 1864, as soon as the Vincentown line was run from Ewansville, three miles to the north on the Camden and Burlington County Railroad line, General John B. Irick was able to begin digging and shipping marl from an area just south of the village, west of the mill pond. This was the most obvious and instant display of the new shipping potential, but virtually every type of local production was able to make use of the rails. At its height, the rail yard, located just north of the village, had five tracks including one for passenger cars, one for milk cars and one for general freight. Lumber, cattle, cranberries, milk and marl were all shipped out of Vincentown and, of course, consumer items were shipped in. Overall, the railroad did not alter the economic framework of the town, the marl industry notwithstanding, but rather served to stabilize and enhance what had already

Township, Burlington County, NJ

developed by 1864. Of course, after the advent of automobiles and trucks, the system was again severely altered, and the railroad lapsed into obscurity as quickly as it had arrived. By 1928 the line was discontinued.

Indicative of the changes occurring after the 1920's is the fact that no major additions to the town occurred after this period. The town continues to function as a center for the township, but with continually decreasing prominence. There is a notably high continuity of family ownership which represents the town's greatest asset.

Historical Archeology

A major gristmill was located along Mill Street at property #87 from at least 1812 until the second quarter of the 20th century. Although the structure is gone, the flume, wheel pits, tail race and stone foundations are in evidence. Along the mill race, between Mill and Race Streets, is another archeological industrial resource - a 19th/20th century sawmill and lumber site (#200). Although this area has not been thoroughly investigated for evidence of remnants, this site is within the flood plain and appears relatively undisturbed.

Because of the historical and physical prominence and relatively undisturbed nature of these two major industrial components within the historic district, they constitute a resource capable of yielding information important to furthering the understanding of regional 19th and early 20th century industry and technology and its impact on the history and development of the surrounding village. The sites likely contain information important to the research and documentation on the local lumber industry and grain milling economy in Vincentown and its economic interdependence to the region.

Archeological potential will be clearly demonstrated when archeological research and investigation in conjunction with the more conventional historical research documentation addresses 1) the development and construction phases of the mills 2) the technological environmental and commercial factors which affected changes within the mills, 3) how the mills interrelated with each other, the village, and the surrounding regions, 4) the products of the mills, 5) the marketing distributions of the products and 6) how these mills impacted the history and growth of Vincentown.

BOUNDARY JUSTIFICATION

The boundaries of the Vincentown Historic District conform essentially to form the village as it stood at the turn of the 20th century and as documented in the Sanborn Insurance Map of 1908.

Jade Run, an offshoot of the South Branch of the Rancocas River, forms much of the southern boundary of the district. It is a practical geographic delineation forming a natural and physical village limit. The northwest boundary follows the rear property lines of the historic properties fronting on Mill Street. Most of the southern boundary runs along the northern bank of the South Branch of the Rancocas. The southwest boundary is created by excluding a recent small housing development. The western boundary provides a change from village to a predominantly rural landscape with scattered recent housing. The eastern boundary signals a dramatic change in the type of buildings, both in age, character, and use.

The open land included in the district provides an appropriate historical setting for the district, but more importantly is associated with properties that have frontage on the streets of the village.
