Describe the present and original (if known) physical appearance

In the years 1889 and 1890, architect William Lang built five townhouses on the 1600 block of Washington Street in what is now one of Denver's older residential areas. Designed as a group, the buildings responded to one another "in calculated and subtle rhythms as one walked along the street. Lang began one end with rusticated asymmetry and ended at the other with perfect symmetry and superb balance." ¹The structure at 1626 Washington is one of the three which survives today. Despite the loss of Lang's original conception in the construction of the five contiguous buildings, the three that remain all reflect individual importance in their particular design, use of materials and detailing.

The front facade of 1626 Washington Street is a symmetrical composition of smooth sandstone. It has an unusual stepped gable featuring ornate sandstone carvings. (The upper portions of the gable has suffered from erosion and some repair work has been done using concrete to cap the sandstone stepped parapet.) The front facade is three stories in height and 22 feet in width. Arches over the front entry and window into the front parlor are Romanesque in style.

The structure has recently been used as a four-unit apartment house and thus some changes have been made to the interior; namely the insertion of walls on the second floor. However, the first floor is relatively intact, with much of the original millwork in terms of moldings and door frames remain. The two most significant features that survive include an ornately carved mantel on the first floor and a staircase which spirals gracefully up all three stories.

¹Richard Brettell, <u>Historic Denver</u>, P. 76.

Statement of Significance (in one paragraph)

The William Lang Townhouse, constructed in 1890, has architectural distinction in Denver through its quality and uniqueness of design, use of materials and state of preservation. It also has historical importance in serving as the private residence of William Lang, "the most popular and prolific designer of domestic architecture in nineteenth century Denver."

Lang began his career in Denver in 1886 and did the vast majority of his building between 1888 and 1892. "His houses ranged from cottages to mansions and were constructed in every part of Denver and in most of the city's nineteenth century suburbs." He was considered Denver's most eclectic architect of the day. "He never built a building in a clear nameable style and was an architect who conceived of a building as a combination of architectural elements derived from a great many other buildings." His was an architecture of flamboyant complexity in direct opposition to the simplicity of the Richardsonian style popular at that time. His work has been termed "an architecture of the melting pot." "It was an egalitarian and unbiased architecture free from the imperialist imagery of the Second Empire. Its esthetic was one of complexity, confusion, and, as Robert Venturi would no doubt add, contradiction. Its enemy was classicism, rationality, and clarity. "3

The William Lang Townhouse was constructed in 1890 and Lang lived there until his career came to an abrupt end with the great silver crash of 1893. There are no records of William Lang in Denver beyond 1893. The townhouse, a remarkable structure in itself, is part of an original group of five townhouses which as a whole is perhaps the best example of Lang's fantastic eclecticism.

Notable in the design of Lang's residence is the use of stone facing on the primary facade, the front stepped gable, a richly carved panel between the second and third floors, and the arched bays on the first floor.
