DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

The buildings of the Thames River Shipyard are situated on approximately seven acres of land on the west bank of the Thames River in New London, Connecticut. The terrain consists of flat land devoid of trees or relieving natural features. All buildings presently on the site are, or were, formerly used in the shipyard operation. The nominated area is bounded on the west by the roadbed of the Central Vermont Railroad, on the east by the bank of the Thames River, on the north, the property of Connecticut College, and on the south by the U.S. Coast Guard Academy. The Thames Shipyard is approached from the west by a steep descent down Farnsworth Street.

The central feature of the Thames Shipyard is the two-story brick headhouse of the two steam-powered marine railways. The headhouse contains two large stationary steam engines (manufactured by Huston, Stamwood and Gamble of Cincinnati, Ohio) with a long driveshaft which powers heavy chain winches (manufactured by W.R. Poole & Son, Baltimore, Md.) for two marine railways (4000 and 1000 deadweight tons). The second story of the headhouse was destroyed in the hurricane of 1938, and it is not known if the building was returned to its original appearance. The second story is presently sheathed in metal, stamped and painted to resemble brick. The northern end of the headhouse contains a blacksmith shop. The building makes a right angle to the east and is carried on as a wood frame, two-story structure used as a pipe shop.

Each of the three marine railways extending eastward into the Thames River consist of four wrought iron rails mounted on continuous sleepers. The carriages are constructed of heavy timber. On each carriage is erected a lighter weight cradle which supports the vessel from each side. Each carriage is drawn by two lengths of stud link chain wound on drums (wild cats) with pockets to receive the links.

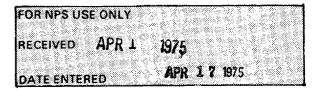

To the west and south of the main headhouse stands a three-story wood frame storehouse. This building is sheathed in "pressed galvanized brick" sheet metal siding.

South of the main headhouse is a small, one-story wood frame headhouse for the one electric marine railway (1,500 tons).

Beyond the electric marine railway headhouse is a four-story wood frame machine shop containing belt-driven machine tools. Originally powered by its own steam engines, the machine shop now utilizes electric motors.

Various other small frame buildings, including a fire hose shed (one story wood frame) and a wood shop (one story wood frame containing a band saw and equipped with wheeled carriages on rails for handling large timbers) are scattered about the site. Four wooden piers extend into the Thames River approximately 200 feet from the shoreline. The buildings and grounds contain materials used in shipbuilding, parts of vessels and pleasure boats in storage. UNITED STATES DEPARTMENT OF THE INTERIOR NATIONAL PARK SERVICE

### NATIONAL REGISTER OF HISTORIC PLACES INVENTORY -- NOMINATION FORM

CONTINUATION SHEET

ITEM NUMBER 7 PAGE

Two of the three marine railways are still in use. The largest was damaged by the overloading of its lightweight cradle during World War II. The cradles, railways, chain and gearing for the two useable railways are in excellent condition.

The whole site exhibits almost total historical integrity, with alterations occurring only in some of the nonessential outbuildings and in the larger of the marine railways.

#### STATEMENT OF SIGNIFICANCE

The Thames River Shipyard contains one of the few remaining steampowered marine railways in the nation. The Shipyard is a complete surviving example of a late 19th century marine construction and repair facility, although the Shipyard was actually constructed shortly after the turn of the century. The Thames Shipyard has been in continuous service since its construction in 1900-1901.

The Thames River Shipyard was built by Frank H. Chappell, part owner of the F.H. and A.H. Chappell Coal Company and Thames Tow Boat Company. The latter firm, with its fleet of 14 tugs and 34 barges carried much of the coal used in southern New England. The Thames Shipyard was built initially to overhaul and service the Chappell Company vessels. The Thames Shipyard, Inc., which evolved from Chappell's maintenance facility, was organized as a separate company in 1919.

The Thames Shipyard was used primarily for repair work on the Thames Tow Boat Company fleet and on various large steam yachts. However, some ship construction was carried on at the Shipyard, and the largest steam two boat built up to that time, the 185 foot <u>Paul Jones</u> was launched there in 1914. During World War I, the Shipyard did work on Navy, Coast Guard and Army vessels, as well as on commercial shipping. After the war, commercial work continued. The yard was also used for winter storage and for overhauling very large and luxurious steam and sail yachts. Twelve yachts over 200 feet long were berthed there each winter.

Endy 17

AN OLD STEAM PRULAED ORBUTS.

١

INTERESTING

With the onset of World War II the Thames Shipyard again contracted for military work, including hauling-out and repairing fleet and school submarines. The Shipyard also converted yachts for government use with the Underwater Sound Lab.

The cradle of the large steam marine railway was heavily damaged in 1950. This railway has not been restored to working order. However, the remaining operational steam hauling facility is one of the few remaining such systems in the country. The present owner is the U.S. Coast Guard, which plans to raze the shipyard and build a multi-use facility on the nine acres and on an additional 1.9 acres to be created by landfill.

### NATIONAL REGISTER OF HISTORIC PLACES INVENTORY -- NOMINATION FORM

CONTINUATION SHEET

ITEM NUMBER 👌 🛛 PAGE 🔔

The Thames Shipyard is still in use as an active maritime repair facility. The present tenant of the U.S. Coast Guard, the Thames Shipyard and Repair Company, Inc., operates the smaller steam and the electric marine railways for the hauling out and repairing of barges, tugboats, and yachts. The machine shop and metal forming shop turn out custom made parts required in the repair and refitting of vessels. The Thames Shipyard, therefore, survives as a living, functioning example of industrial and engineering technology from the age of steam.

#### April 8, 1975

To: Miss Kate Cole, National Register of Historic Places

From: Mr. Clark J. Strickland

Subject: Boundaries of the proposed Thames Shipyard, New London, CT

A verbal description of the boundaries of the proposed Thames Shipyard site, New London, CT is as follows:

From the point where the southern edge of the proposed right-of-way for Saltonstall Street intersects with the ordinary high water mark, the northern boundary of the Thames Shipyard extends generally westward along the southern side of the right-of-way of Saltonstall Street, approximately 165 feet to the intersection of the rightof-way for Saltonstall Street with the eastern boundary of the Central Vermont Railroad right-of-way; thence, the western boundary extends along the eastern edge of the Central Vermont Railroad right-of-way south for approximately  $1234\frac{1}{2}$  feet to the present northern boundary of the United States Coast Guard Academy where that boundary intersects with the eastern edge of the Central Vermont Railroad right-of-way; thence, the southern boundary extends generally eastward for approximately 146 feet to a point of land approximately 40 feet south of the City of New London's sewer outfall; thence, the eastern boundary extends northerly along the line of the ordinary high water level0to the Thitlal' starting point. The enclosed area consists of 7.227 acres of land as detailed on the enclosed map.
