18. (cont.) fenestration. The interior of the house is nearly intact. A cherry banister of simple design rises from the first to second floor in the central hall. The front windows were shortened in ca. 1940, but they retain their original frames. The chimney on the south side of the house is standard and once carried matnels on both floors. The chimney on the north side is very narrow and was probably used for a stove. The rooms in the L have shorter floor to ceiling height. There is a step down from the front to the rear section on the second, indicating that the rear section is an addition, but the clapboard on the exterior shows no evidence of any additions.

19. (cont.) the house was rented by most of the owners. In early deeds, 26th St. was the "road which leads from Shippingport to the mouth of the Salt River,...between Louisville and Portland."

20. (cont.) built sometime before 1820, and a portion of the Bullock-Clifton House (National Register, 1982) was built in 1834. Other than these, no other frame residences survive from the same period. This is a very modest residence and is an important local example of the I-type residence, so rare in the city in any building material, particularly in frame. The house is largely intact, with some alterations to the facade fenestration.
