DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

The Westfield Municipal Building (State Normal School) is located at 59 Court Street in downtown Westfield. The property comprises $3\frac{1}{4}$ acres, and is surrounded primarily by commercial structures.

The $3\frac{1}{2}$ story L-shaped building was designed by the Boston firm of Hartwell and Richardson, in the Richardsonian-Romanesque style. It was built by the Darling Brothers of Worcester in 1889-92. It is a simple rectangle with gable ends constructed of brick with brownstone trim and a granite foundation. A wide brownstone block band links the lintels of the basement windows. A molded brownstone stringcourse defines the second story floor level. A partially molded brownstone course marks the entablature of the building. The slate tiled ridge roof has three large chimneys. Fenestration is varied. Most of the windows, although of contrasting scale, are $2/2$ with multi-light transoms. Others are round arched, or small and large single casements.

The symmetrical, 11 bay wide facade faces south. The center, five bay wide section is two stories tall. This is flanked by three bay wide, $3\frac{1}{2}$ story tall intersecting gable sections on the eastern and western ends.

Two round arched entrances occupy the ends of the center section. Between these are three $2/2$ windows with transoms, headed by the wooden Westfield Municipal Building sign. The second story of the center section has tall $2/2$ windows with transoms. The middle window is headed by a clock face, and crowned by a Romanesque dormer containing a round arched double $6/6$ window. The two gable ends each have small basement windows. The first story has a grouping of four small Greek Cross casements nearest to the two entryways. These are headed by double casements with a trefoil ornamented panel on the second story and an arched $1/1$ window and round arched architrave molding on the third story. The eastern and western ends of the gable sections are offset paired $2/2$ windows with transoms on all three stories. The two gables themselves each contain a triple $6/6$ window separated by double engaged Romanesque columns and headed by a wide brownstone panel. Above this is a segmentally arched brownstone block band topped by a plain band in each gable peak.

The east elevation is 13 bays deep. The bays are arranged in alternating groups of 3 sections of 3 bays each divided by 2 sections of 2 bays each. The two dividing sections have a full attic floor and a gable pierced by a long round arched window. Fenestration on this elevation is $2/2$ with multi light transoms. The gable windows are $8/2$ with round arched cornices. The ground floor of the dividing sections contain round arched entrys. There is a 3 story brick rectangular addition on the southern most end of the elevation. The addition is windowless. It is used for vault space.

The west elevation is seven bays deep. First story windows are tall $2/2$ with transom. Second story windows are alternating $6/1$ and $2/2$ with transom. Third

story windows are 2/2 with transom. The central bay is accented by a dormer containing a round arched window flanked by engaged Romanesque columns, and headed by relief work in the peak.

The north (rear) elevation has a fully exposed basement story. There is an entrance with a triangular pediment. This is flanked by window on either side, and headed by four windows on the first and second stories with three hip roof dormers overhead, and a skylight in the roof. The western end of the elevation is an intersecting gable. It has three windows on the basement, first and second stories, and five windows on the third story. The gable pediment contains a round arched Palladian style window.

The building wing projects from the eastern end of the rear elevation. It is six bays deep by six bays wide. The west elevation of the wing has two windows on all four stories in the northern end, with two smaller windows on each story to the right of these. The southern end of the wing elevation has a tall round arched window which runs from the second to the third story. The north (rear) elevation of the wing has a one story brick addition used for storage and vault space. There are two windows remaining on both the basement and first stories. The second story has four windows. The third story has six windows, and the gable pediment has a round arched Palladian style window.

The interior of the building was altered during the conversion to the present Municipal Building in 1959. The only alterations to the exterior consist of the two brick additions, one on the east and one on the north elevation.

BUILDER/ARCHITECT Hartwell and Richardson

STATEMENT OF SIGNIFICANCE

The Westfield Municipal Building (formerly the State Normal School) is significant as the former home of the second oldest public teacher training school in the nation. It is an institution which played an important role in the history of western Massachusetts. The Municipal Building is also architecturally significant. It is a structure characteristic of the wave of imitation that followed the great H. H. Richardson's death. Hartwell and Richardson's building uses elements of H. H. Richardson's work at his best: materials, solidity, heavy rounded arched, Romanesque motifs and details, arched set within rectangular panels, and the high pitched roof.

The Municipal Building is one of several structures in the City of Westfield which have housed men and women preparing for careers in elementary and middle school education. The State Normal School at Westfield (now Westfield State College) is the second oldest institution of its kind in the nation and the oldest co-educational teacher-training school. Originally established at Barre in 1839, the State Normal School was intended to educate teachers for the common (i.e. public) schools of Western Massachusetts. The school at Barre was closed in 1842 due to the efforts of those advocating private school training for teachers. However, the Normal School reopened two years later on September 4 and Westfield, its survival having been guaranteed by the work of two reformers in the field of education, Horace Mann and James Carter.

In 1887 James C. Greenough, principal of the Normal School, initiated an expansion of the curriculum and the establishment of the kindergarten and a gymnastics program. In order to accommodate this expansion a new building was required. In 1888 the General Court of Massachusetts appropriated \$150,000 for the purchase of a site and the construction of a new building. In 1889 a tract of land on Court Street was purchased for \$12,500. A contract was made with the Darling Brothers of Worcester to construct the building, and the solid granite foundations were laid in the autumn of 1889. The Normal School Building opened in April 1892 and was formally dedicated in June of the same year. The visiting members of the Board of Education, Milton B. Whitney, Admiral P. Stone, and John W. Dickinson, noted in the Annual Report of 1891 (pp. 38) that the building "has no large features added solely for ornament, but it gains its effect from good proportion and solidity of mass".

The State Normal School at Westfield was socially significant not only for the region that it served but for the nation as well. The school has primarily served in the training of teachers for the public schools of Western Massachusetts, and

its influence has been largely in this area. As President Theodore Roosevelt told a crowd of some 10,000 citizens gathered in Westfield on September 3, 1902: "It is no small honor, no small distinction for a town to have within its borders the second oldest of the institutions which have accomplished such a marvelous work" (W.P.A., The State College at Westfield, 1941, p. 66). The State Normal School has served the nation not only by providing teachers for the schools of Massachusetts, but also in preparing two individuals for their work in government and business. George B. Cortelyou, and graduate of the Normal School in the late nineteenth century, became Secretary of Commerce and Labor under Theodore Roosevelt and was elected the Chairman of the Republican National Committee. He was later appointed Postmaster General and ended his public career as the Secretary of the Treasury. A distinguished member of the faculty and a chemist, Lewis Benajal Allyn, discovered a means for detecting the presence of harmful chemicals in food. Later, as a member of the Westfield Board of Health, he issued lists of pure foods on the basis of what was later termed the "Westfield standard". Finally, the State Normal School has also had an international impact. A Japanese student named Kanda, who earned his undergraduate degree here in the late nineteenth century, ultimately became a member of the Japanese House of Peers and a key person in the establishment of Christian education in Japan.

Dear Mr. Hansel:

On April 18, 1978, we received your concurrence to the additional condition for the Westfield City Hall, Westfield, Massachusetts. A copy of that letter is enclosed. As you agree to this condition, the Executive Director does not object to your determination of no adverse effect.

You should include a copy of this correspondence in any environmental assessment or statement as evidence of your compliance with Section 106 of the National Historic Preservation Act of 1966 (16 U.S.C. 470f, as amended, 90 Stat. 1320).

Thank you for your prompt reply.

Sincerely yours,
