(21/1A)

Dominating the middle of a block on Hope Street in Bristol and overlooking the water, where boats once docked near it, the former Post Office and Customs House is a tall and massive, though restrained, rectangular palazzo. Set back from the sidewalk and raised upon a granite base, it has a towering presence, diminished only by the many recent structures around it. It was built in 1858 from the designs of Ammi B. Young, Supervising Architect of the Treasury Department, who helped the Renaissance Revival style become for a time the predominant one for public buildings, following the long reign of the Greek Revival-sa style in which he was also accomplished.

The plain front wall of deep red brick is pierced by three large arched openings on each of its two stories. A greyish sandstone molding outlines the arches on both floors and caps the piers which separate the first-floor arches; and a decisive molding of the same material forms a belt between the two stories. The center opening on the first floor serves as the doorway; it is flanked by windows barred with iron. As is typical of the Renaissance Revival style, the second-story openings are more complex in their treatment than those below. The upper openings have granite sills, as well as a very shallow balcony of iron, on brackets, running across them. The panelling of the upper façade is understated, but the surmounting entablature is heavy and elaborately decorated. The cornice performs as the visual topping of the building, for the low hipped roof is visible only when one is at a distance from the building.

The sides and rear of the building have window arrangements similar to the front, but include some blind recesses, and the molding on these faces becomes a browner sandstone. A side chimney probably once rose near the front of the left elevation. One chimney is extant, though apparently altered, at the rear of the building. In old photographs there appears a pedimented dormer in the front center of the roof, but it was probably a later addition and is now gone, anyway. The present torchères that are prominently attached to the first-floor piers were later decorations. An iron fence of attenuated balusters encloses the side portions of the small lot on which the building is situated.

The interior is in a state of neglect today. The front area accommodated postal sorting rooms, offices and mail boxes. The original iron columns are evident between the wood panels of the clerks' windows. Also extant is the wooden vestibule. The tile now on the floor seems to be an alteration. Cast iron stairs, railed also in iron, extend up to the customs quarters on the second story, which consist of a very large main room and a smaller one. The stair landing has what seem to be its large, original tiles, and a heavy iron gate divides the landing from the lower stair run. The large room is particularly interesting because of its

(See Continuation Sheet.)

7. Description.

seven sets of iron-framed windows.with heavy iron sills and interior shutters. The scale is impressively large: the ceiling is approximately 17 feet high and there are 8-foot panelled doors. The floors are of hardwood. A very plain marble fireplace is in one corner of the large room.

In the cellar one can see the granite piers which support horizontal iron beams, which in turn support the iron columns of the first floor. The stone-walled cellar extends under the full length and width of the building and has a ceiling of brick.

Currently the building is attached to a modern Y. M. C. A. swimming pool structure and is used somewhat as ante-space, although it may in future be remodelled as offices.
