# **National Register of Historic Places Registration** Form

MAR 25 1991 NATIONAL

REGISTER

This form is for use in nominating or requesting determinations of eligibility for individual properties or districts. See instructions in Guidelines for Completing National Register Forms (National Register Bulletin 16). Complete each item by marking "x" in the appropriate box or by entering the requested information. If an item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, styles, materials, and areas of significance, enter only the categories and subcategories listed in the instructions. For additional space use continuation sheets (Form 10-900a). Type all entries.

## National Register of Historic Places Continuation Sheet

Historic Resources of Mammoth Cave National Park, MPSSection number 7Page 1Colossal Cavern Entrance

7. Description of present and historic physical appearance.

Colossal Cavern entrance is set in a hillside facing west, approximately 1.5 miles east of park headquarters, 3500 feet south of Flint Ridge Road. This is a natural entrance which has been improved by cave operators. Limestone slab stairs descend to the entrance door, which is set into limestone retaining walls, added to support the entrance when the cave was operated commercially. A metal railing, which was added in the late 1970s, runs along the right side of the steps, which continue inside the entrance door for approximately 112 feet. The steel door, which replaced the original, also in the late 1970s, measures approximately 4.5 feet high and 3 feet wide and has several 3 inch wide slits to allow for the free passage of air and bats. The Indiana Bat, an endangered species, hibernates in Colossal Cave during the winter season. When the cave was operated commercially in the late nineteenth and early twentieth centuries, there was likely a ticket office near the cave entrance. Nominated resources include a contributing site, the cave entrance; two contributing structures, the stairway and retaining wall; and two noncontributing structures, the door and railing.

Colossal Cave entrance is in fair condition. Although the original door or gate was replaced and the limestone stairs are slightly deteriorated due to weather and lack of maintenance, the opening leading to the cave is original and the hillside in which the opening rests is unaltered. Integrity of location, immediate setting, design, feeling, and association are maintained.

Historic Resources of Mammoth Cave National Park, MPS Edmonson, Hart, and Barren Counties, Kentucky Colossal Cavern Entrance

Section number \_\_\_\_8 Page \_\_\_1

8. Statement of significance, criteria justification, criteria considerations, and areas and periods of significance.

The entrance to Colossal Cavern is historically significant in the area of Entertainment/recreation (for property type information, see Section III of Historic Resource Study, pages C-7 to C-9).

The period of significance, 1895-1929, includes the years from the cave's discovery to the discontinuation of its use as a commercial cave. As a major commercial cave which competed with Mammoth Cave and other local caves in the late nineteenth and early twentieth centuries, Colossal Cavern represents the property type "Commercial Cave Entrances and Related Structures." The entrance to Colossal Cavern, which connects the surface with underground passages, is the most visible extant feature associated with the comercial operation of the cave.

Mammoth Cave has been a well-known tourist attraction since the early nineteenth century. In the latter part of that century local residents searched for other caves that might draw tourists. Between 1895 and 1924 several major commercial caves, Colossal Cavern, Great Onyx Cave, Crystal Cave, New Entrance Cave, and the Frozen Niagara portion of Mammoth Cave were opened to visitors. These caves competed with Mammoth Cave and each other for the area tourist business.

Although several people claim the discovery of Colossal Cave, Horace Hovey, author of many books about Mammoth Cave, believes that William Garvin discovered the entrance to the cave in 1895 while exploring an unusual hole in a hillside near his farm on Flint Ridge. The land on which the entrance was located was owned by Dr. L. W. Hazen, who sold the property to the Louisville & Nashville Railroad in 1896 and was retained by the Railroad as an agent for the property. The L & N had been promoting the area tourist business in various ways (i.e., special tour packages, support of a spur line leading to Mammoth Cave from Glasgow Junction) since the Railroad's main line had been constructed near the cave area in the 1850s. After acquiring the Colossal Cavern property, the Railroad improved the cave's entrance with retaining walls, stone stairs, and a door or gate, and explored and upgraded passages for visitors. The cave was widely advertized and was a popular area tourist attraction.

Section number \_\_\_\_8 Page \_\_\_2

Colossal Cavern was operated commercially by the railroad until 1929, when the property was donated to the Mammoth Cave National Park Association for the proposed national park at Mammoth Cave.

Verbal Boundary Description

The boundary consists of the cave opening, which measures approximately 4.5 feet high and 3 feet wide, 4 feet of stone retaining wall at the top of the entrance, and a ten foot wide path which runs 20 feet west from the entrance door and which encompases stone retaining walls on each side of the entrance and the stairway ascending to the surface.

#### Boundary Justification

The boundary includes the cave opening and the portion of the hillside in which it is found, the railing and stone steps leading to the cave, the sandstone retaining walls, and the steel entrance door. The boundary excludes the land surrounding the entrance, which may have been historically associated with this entrance, but on which there are no extant structural remains.
