National Register of Historic Places Registration Form

This form is for use in nominating or requesting determinations of eligibility for individual properties or districts. See instructions in *Guidelines* for Completing National Register Forms (National Register Bulletin 16). Complete each item by marking "x" in the appropriate box or by entering the requested information. If an item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, styles, materials, and areas of significance, enter only the categories and subcategories listed in the instructions. For additional space use continuation sheets (Form 10-900a). Type all entries.

Describe present and historic physical appearance.

The Statenville Consolidated School is a one-story, brick structure which contains classrooms, office space, and an auditorium, as well as several additions to the original school for classrooms, library, and cafeteria. There are also newer non-historic buildings on the school grounds. The original school was constructed of textured red brick with subsequent additions (marked on the enclosed sketch map) out of smooth red brick. The building has a multi-hipped roof and recessed arched entryways with gabled parapets. Although original window openings remain, all the windows and doors have been changed due to new state school building and fire code standards. The building's exterior has little ornamentation. One significant feature is a cartouche over the front entrance bearing the initials "SCS", representing the school's original designation. The auditorium, built in 1931, retains its original seating, floors, ceiling (although now covered), and walls. The classroom building itself has had many changes to its interior walls, room arrangements, and usage. Interior materials were removed and some were covered over. The nominated parcel is surrounded on two sides by buildings on the campus that are not permanently attached to the original classroom building. These surrounding buildings are: a classroom building (1952) attached by an open breezeway; garage (1964); cafetorium, gymnasium and elementary classroom buildings, all separate structures (1974), and media center/library (1984). The campus is on flat to gently rolling land on the eastern edge of the small, unincorporated town of Statenville. Landscaping is minimal, but does include a historic cedar tree. The campus is surrounded by residential development and is only a block from the Echols County Courthouse.

State significance of property, and justify criteria, criteria considerations, and areas and periods of significance noted above.

Statement of Significance

The Statenville Consolidated School is significant in <u>architecture</u> as an example of the type of building that a small, rural school system could afford to build in 1931, in the midst of the Depression, and before the onset of the Federally funded building programs with the New Deal in 1933. It was the one major building built in the county during the 1930s. Although simple, it was designed by noted south Georgia architect Lloyd Greer (1885 - 1952) of nearby Valdosta. He designed many schools in south Georgia, of varying degrees of detail. Like many school architects, he could tailor his buildings to the financial needs of school systems. This school reflects the barest minimum of ornamentation and details, yet reflects up-to-date planning and room arrangement. This school shows the transition in design from the prevalent 1920s concept of two-story, brick school design to this one-level design, foreshadowing the 1950s or modern era.

The school is significant in education because it reflects locally the consolidated school program which began in Georgia at the end of World War I and was late in reaching Echols County, the state's least populated county in 1930, and one It is also important for reflecting different types of funding of the poorest. The burning of the former wooden school in 1929 precipitated the need for used. a new school building, to be built on a site used for educational purposes since The new building was built in 1931. Additions were made to the building 1911. as the county's schools consolidated during the 1930s, bringing more pupils into The Federal building programs during the New Deal era helped this this facility. poor county to enlarge the school in 1938-1939 and thus expedite consolidation. The Public Works Administration, one the many building programs created during the New Deal, was the source of matching funds for the school's third addition, all part of its efforts to keep up with the growing school population brought about by the county consolidation of schools. The classroom capacity attained after this addition brought the school to a new plateau, for in 1940, shortly after it was completed, the school was renamed the "Echols County High School", reflecting its new role. Later the school added an elementary classroom building (not on the nominated property) that made it the center for the education of all the county's white children until integration in 1970 brought all the county's public school children under one roof.

Section number ____8 Page ____

The school is also significant in <u>social history</u> because, in deciding to launch a bond issue to build the new school, the county also included an auditorium in the plans. When the auditorium opened, along with the school, in the fall of 1931, it was, and still is, the largest meeting space in the county, and has thus been the center for entertainment and public meetings of all kinds.

Period of Significance

1931-1939 is given as the period of significance because during this time the school building was built and had three additions, the last one during the historic period having begun in 1938 and completed in 1939. It was this third addition that brought the school to a capacity or size in which it was able to be the county's consolidated high school and thus allowed its renaming in 1940 as the "Echols County High School".

National Register Criteria

These areas of significance support the property's eligibility under National Register Criteria A and C. Under Criteria A, the school is "associated with events that have made a significant contribution to the broad patterns of our history" in that it is a school and since it was built it has been the center of the county's educational program. It symbolizes not only the county's effort to join the state's school consolidation program to provide better education through one central school, but also the efforts of a poor county to raise money by a variety of means during the Depression, not an easy task, and one in which many other counties failed. As a part of the county's search for funds, a matching grant was obtained from the Public Works Administration, a New Deal agency, that helped local governments with their building programs which also provided much-needed jobs during the The school meets Criteria C--"embody the distinctive characteristics Depression. of a type..."--because it was designed by a trained architect, Lloyd Greer, who created a school on a modern, one-level central-hall plan which reflected new early 20th century educational facility design theory, met new fire codes, and was a forerunner of the later 1950s schools. Thus this 1931 building represents a watershed in school design, as one of the earliest of the one-level, fire-proof, no-frills public schools that reached their peak in Georgia in the 1950s and 1960s.

Criteria Consideration G

The historic portion of this school is considered the original (1931) portion and the first three additions: 1935, 1936, and 1938-1939. This last addition, begun during the historic period, was not completed until 1939. This third addition was a most important one for the history of the school, for it reflects not only the county's use of New Deal construction money through the Public Works Administration grant, but also the completion of the first phase of the county's consolidation program. At the end of that phase, this school, having achieved a size in which it could hold the county's high school students, was renamed in 1940, "Echols County High School". Historical Narrative/Context Statement

The Statenville Consolidated School is situated in extreme south Georgia, only a few miles from Florida. It lies in a county created in 1858, but which has, for most of its existence, had the smallest population of any of Georgia's 161 counties (159 after 1932). The county seat, Statenville, where the school is located, has never been incorporated.

Given its isolated location, paucity of settlers, and lack of a large tax base, Echols County never had many large schools, or any with any high-style architecture. The county's first major school building was built on this property after 1911 when the land was bought just for the new school. Although by 1926 this building was considered inadequate for the county's educational needs, neither the town nor the county had any money for a larger school, and a bond issue was proposed. The school, like its successor, the nominated property, was also the center for county activities: box suppers, political rallies, community social events such as sings, etc. While efforts were underway to raise money for a larger school through a bond issue, the original school burned on January 30, 1929.

From 1929 to 1931 there was no public school building in Statenville and school as held in a private home and later a parsonage. In 1931, the town of Statenville passed a local school tax and a bond issue for building a new school. In May, 1931, the Statenville Board of Trustees met with the architect, Lloyd Greer, and the contractor, and the school building began. The Statenville Consolidated School was completed and open by September 28, 1931. The auditorium was completed about two weeks later, and held its first play in November.

Once the school was completed, the school building program did not remain dormant. The building did not remain in its 1931 size very long. Two additional classrooms were added in 1935, using money diverted from highway funds. The addition was of brick, but even in the short four years since the original building was finished, the brick could not be matched. Two more rooms were added in 1936.

Running water was added to the school in September, 1937. In late 1938 a loan was made to the school's Board of Trustees to allow the Board to qualify for a Public Works Administration grant to enlarge the school again. The Public works Administration was one of the most important New Deal Agencies created shortly after Franklin D. Roosevelt became president in 1933. Its goal was to assist local governments in their building programs and also to provide jobs to bring the nation out of the Depression. The grant made to Echols County for this school addition accomplished both purposes. This classroom addition appears to be the county's only New Deal era project and certainly the only one which survives. As part of this grant, more classrooms were added, as well as a wooden gymnasium (now gone). In 1939, a projection room was added to the auditorium.

By 1940, all other county high schools had consolidated with the Statenville Consolidated School, and this school was now large enough to hold the county's

United States Department of the Interior National Park Service

National Register of Historic Places Continuation Sheet

Section number <u>8</u> Page <u>4</u>

pupils. Thus it was renamed "Echols County High School," a name it has borne ever since. In 1948, a new wing was added to the original building, completing the structure that is being nominated. This new wing included then a new Home Economics Department, a science room, the lunchroom, and the principal's office. Fluorescent lighting was added to the classrooms in that year. By 1950, all the common schools in the county had consolidated with this school.

In later years, other additions and wings were added to the school compound, but are not within the nominated property and not a part of this nomination.

State-mandated facility upgrading has changed many details of the school, as with all historic schools still in use. The building remains open as the county high school, and the auditorium is still used for many activities. PROPERTY PLAT MAP STATENVILLE CONSOLIDATED SCHOOL Statenville, Echols County, Georgia Scale: ______ = 50' Source: Plat drawn as base for Addition to the School; drawn by G. E.
