Item Number(s)

One of two barns thought to have been sold by J.G. McQuilkin in his role as a representative of the Johnston Brothers' Clay Works. This barn is specifically characterized as a Johnston Brothers' sub-type by its exterior wall of "...small red clay tile in the lower story and larger tile above..." (Soike 1983). The conical roof is another common feature of the Johnston Brothers' design. The clay tile exterior wall and silo wall generally classify this barn as an lowa Agricultural Experiment Station / Matt King influenced type. The use of structural clay tile was one of the later improvements in the history of round barns.

It is known from the 1979 Mail Questionaire that this barn was originally a beef cattle barn, and that as of 1979 was still used for that purpose. The open interior is characteristic of this type.
