OMB No. 1024-0018

United States Department of the Interior National Park Service

# MAY 1 7 1990

### National Register of Historic Places Registration Form

NATIONAL REGISTER

This form is for use in nominating or requesting determinations of eligibility for individual properties or districts. See instructions in *Guidelines* for Completing National Register Forms (National Register Bulletin 16). Complete each item by marking "x" in the appropriate box or by entering the requested information. If an item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, styles, materials, and areas of significance, enter only the categories and subcategories listed in the instructions. For additional space use continuation sheets (Form 10-900a). Type all entries.

## National Register of Historic Places Continuation Sheet

		7	-	1
Section	number		Page	

#### Summary

The Johnson Barn is a two story, balloon-frame, gambrel roof agricultural building. It features a rectangular, side-drive plan. It is supported by a fieldstone foundation, sheathed with wood weatherboard siding, and constructed with solid walnut columns on the first floor and long, unspliced truss members that frame the gambrel roof.

#### Elaboration

The Johnson Barn is a two story, balloon-frame, gambrel roof agricultural building. Its rectangular, side-drive plan features a drive to the west and three cribs to the east on the first floor, and an open loft on the second floor. The roof is covered with sheet metal, the walls are sheathed with weatherboard and the continuous foundation is constructed from fieldstone.

The southern elevation is accessed by a large wooden sliding door to the west and a smaller wooden sliding door to the east, the latter of which is placed slightly lower due to the decrease in grade. A square hay chute is placed centrally above the doors. The gable roof hay hood at the top of the elevation shelters a large, rectangular loading bay the door of which features a hinged, triangular top that allows it to be raised more easily via a rope and pulley system. Two square, fixed four-pane wood windows are placed symmetrically to either side of the hay hood. The first story of the northern elevation is identical to that of the southern elevation. The only punctuation of the elevation above the square hay chute is formed by the two four-pane fixed windows placed symmetrically beneath the breaks in the roofline and the smaller vent just beneath the roof peak.

The eastern and western elevations are similar, in that both are relieved with four-pane fixed wood windows. The only difference is the fact that the seven windows that light the drive on the western elevation are evenly placed across its full length, while those that light the eastern elevation are grouped into two sets of three at either end of the elevation and a central set of two, which are more widely spaced apart. This configuration corresponds to the placement of the cribs behind, with the central crib receiving the two lights and the other two receiving three.

The interior is simply appointed. The first floor has a dirt floor with the exception of the central crib, which has a pine floor like the second story loft. The upper story is accessed via a ladder in the southern crib which abuts the southern wall of the center crib.

8. Statement of Significance	ŧ.

Section number \_\_\_\_8 Page \_\_\_1

**Summary** 

Criterion C, local significance

The Johnson Barn was designed in 1933 by Ben F. Johnson III, a graduate of Harvard University's Landscape Architecture Program, and built by the Johnson family. The design as built is the product of the observation and study of various barn types indigenous to northwest Arkansas conducted by Ben Johnson and his brother Arthur, the point of which was to select the best design features of each and incorporate them into an 'ideal' barn structure. The result was a creative synthesis of agricultural form and function unique to this region.

#### Elaboration

Benjamin Franklin Johnson III was born in Everton, Missouri in 1901, the last child born to the union of Benjamin Franklin Johnson, Junior and his wife Rachel Elizabeth Divelbiss. The elder Johnson brought his family to this location south of Fayetteville, Arkansas, on the Old Wire Road South (now known as the Cato Springs Road) in 1908. Ben Johnson, Jr. had grown pears in Everton, which he then sold in his merchandise store, and his familiarity with this pursuit led him to settle on this apple and pear orchard outside Fayetteville. It was on this farm that Ben Johnson III and his siblings were raised.

Ben Johnson III completed his secondary education at the University of Arkansas Training High School, called Peabody, before receiving a bachelor of arts degree from the Missouri State Normal School (MSNS) in Springfield in 1926 and a Masters in Landscape Architecture from Harvard University in 1930. His subsequent travels in Europe and Egypt, followed by both his private landscape design practice in Rochester, New York and his public service as the city planning engineer for the city of Houston, Texas prevented him from living on the Fayetteville farm until his retirement in 1965. As a full-time farmer, he devoted himself to gardening, landscaping and harvesting pears from the old pear trees, as well as planting fourteen varieties of new trees with his son, Benjamin IV. He was also an active leader in the formation of the Farmers' Market in Fayetteville in 1975.

The earlier barn on this site collapsed on April 7, 1933, under the weight of an unusually heavy snowfall. Ben returned to the farm, and he and his brother Arthur travelled throughout northwest Arkansas studying local barns, making sketches and notes along the way of the best features of each for use in designing the new barn for the Johnson farm. As it was during the Depression, the family employed fourteen local men to help construct the barn at the wages of one dollar per day. They worked quickly, as the first load of hay was hoisted into the loft just thirty days after the furrows had been dug to receive the foundation stones. The lower level was used milking cows, sheltering animals, and storing implements and farm machinery. Apples and pears from the orchards, as well as hay, were stored in the upper level. The barn was used by the Johnson family until the mid-1970's.

## National Register of Historic Places Continuation Sheet

0 - 11 -		8	_	2
Section	number		Page	

The barn is obviously noteworthy for its impressive size and classic appearance; however, it is remarkable for more functional features, such as the hinged loft door, making lifting it to cover the loft opening much easier to accomplish, and the provision of external livestock doors for each of the end cribs, allowing the animals access to the shelter of the barn without having to pass around any farm machinery stored in the side drive. Equally impressive is the soaring interior space of the upper loft, supported as it is by the trusswork - which follows the roofline closely, not intruding into the space - and not by vertical load-bearing supports of any kind. Furthermore, the barn has suffered virtually no additions or alterations. The Johnson Barn stands as an architecturally and functionally unique example of a modern gambrel roof barn designed by a trained and innovative craftsman and landscape architect.
