The Philadelphia's hull is 54 feet in length, 15 feet in beam and approximately five feet deep. Construction was almost entirely of oak and sap still remained in the bottom planking. The mast, almost 36 feet high, was found intact except for the top portion, and the hull timbers were still in place. Three shot holes were visible in the hull and in one of them a cannon ball was lodged. Considering the punishment it took in battle and its long years underwater, the Philadelphia is an exceptionally well-preserved survivor of this important Revolutionary War naval battle.

STATEMENT OF SIGNIFICANCE

X

The United States Gundelo Philadelphia is the only surviving gun boat built and manned by American forces during the Revolutionary War. Further, the vessel is one of the 15 small craft with which Benedict Arnold fought 29 British vessels in the battle off Valcour Island, Lake Champlain, October 11, 1776. The year of grace won by the building of Arnold's "fleet" and the battle off Valcour Island paved the way for the decisive American victory at Saratoga in the fall of the following year.

Little more than a rowboat compared with modern vessels, the Philadelphia was one of the hastily-built fleet constructed in early summer of 1776 at the present Whitehall, New York. On September 23, 1776, the fleet took position in the small bay west of Valcour Island, about seven miles south of what is now Plattsburg, New York. The sound between the Island and the mainland was about three quarters of a mile wide, divided by a high bluff projecting from the west side of the Island. Arnold's fleet formed its line south of the bluff and in this position fought the heavier British fleet to a standstill on October 11. The American force was badly damaged in the action and only with considerable luck was Arnold to elude the enemy and escape southward during the night. The Royal Savage, the American flagship, and the Philadelphia had gone to the bottom on October 11, and only four of Arnold's vessels managed to elude the British pursuit during the next two days.

In 1934, the wreck of the Royal Savage was recovered and the pieces saved. In the following year the Philadelphia, remarkably well preserved by the cold water, was identified and salvaged from the sandy lake bottom near the midchannel of Valcour Bay. After her guns, a twelve-pounder and two nine-pounders, were lifted, the hull was raised 57 feet to the surface and towed to the beach. In addition to her guns, hundreds of other relics were found on the vessel--shot, cooking utensils, tools, buttons, buckles and human bones.

In the ensuing years the vessel was exhibited at various points on Lake Champlain and the Hudson, prior to her installation at a permanent exhibit space at Exeter, New York. In 1961 by the terms of the will of Lorenzo Haggluend, who first identified, salvaged, and later exhibited the vessel, the Philadelphia was bequeathed to the Smithsonian Institution. She has been since exhibited on the third floor of the Smithsonian's Museum of History and Technology, in Washington, D.C. The exhibit also includes virtually all the artifacts recovered with the vessel in 1935.

In recent years the original payroll of the Continental Gondola <u>Philadelphia</u>, whose crew was hitherto unknown, was recovered, in some documents at Fort Concho in Texas. The payroll lists the entire 44 men of the crew, identifying Captain Benjamin Rue as of Pennsylvania, and 27 of the 44 men as from New Hampshire.

(See also national historic landmarks Fort Crown Point, Fort Ticonderoga and Fort St. Frederick.)
