Describe the present and original (if known) physical appearance

The Fred W. Kienhoff Barn (ca. 1888) is located on the Jerry M. Baker Farm near Wathena, Kansas (pop. 1,418). The one-story, three-bay, center entrance, vertically planked barn has a partial byre with a limestone foundation and a metal sheathed gable roof. The superstructure is supported by mortised and tenoned, post and beam framing. The barn has an east to west orientation, with the byre built into the south and west embankments. The barn measures forty-five feet from north to south and thirty-three fect from east to west.

Vertically planked, double leaf rolling doors stand in the center bays on the west and east elevations. The doors are flanked by an arched louvered vent on each side. A pent roof, wooden granary projects from the north elevation with an access at the byre level. Two arched, louvered vents pierce the threshing floor level of the south elevation. A gable roof, wooden spring house projects from the southeast corner of the barn. The barn is painted barn.

Originally constructed as a draft animal barn, the building is now used for hay storage. It maintains a high degree of architectural and structural integrity. The significant alteration to the barn has been the replacement of the original roof with a metal roof. This is an alteration common to many of the barns included in this nomination.

climate of Kansas it is preferable to any other, unless there should be an unusually moist ledge directly against or under it... The building should be located so that the basement will be partly in the ground on the north and west, and so that a low embankment, or filling, on these sides will give access to the second story.

While the byre or bluff barn presented a practical solution for Doniphan County's rolling topography, harsh winters, and high winds, it was not the most common solution. The byre and bluff barns built between 1860 and 1933 generally cost from \$2,000.00 to \$3,000.00 and while this may have been cost effective investment, it was an expensive investment. In addition, the higher degree of skilled craftsmanship required to construct a byre or bluff barn as opposed to most barns without foundations also hindered their construction. While the byre and bluff barns of Doniphan County are a sturdy survivor of a barn type built in Doniphan County between 1860 and 1933 they are not prolific, being far outnumbered by more inexpensive, rectangular wooden barns without foundations.

Statement of Significance (in one paragraph)

The Fred W. Kienhoff Barn (ca. 1888) is being nominated to the National Register as part of the Byre and Bluff Barns of Doniphan County (ca. 1860-1933) nomination under criterion C for its architectural significance. The Kienhoff family immigrated from Prussia to Doniphan County in 1865. Fred W. Kienhoff purchased the land on which the nominated barn stands in 1882 from his father. Constructed for Kienhoff in 1888, the barn is an example of a three-bay, center entrance, parital byre, vertically planked, gable roof and limestone foundation structure with a threshing floor and a hay loft. The Kienhoff family retained ownership of the barn until 1954, when it was purchased by Jerry M. Baker.

The eighteen nominated barns share a common feature in that at least one side of each barn's foundation is embedded in an earthen bank or bluff; the majority of the barns are built into shallow banks, two of the barns are built into bluffs. These vernacular wooden and cement structures span a seventy year construction period and exhibit various masonry foundations, skeletal structures, and superstructures. The byre and bluff barns of Doniphan County are an excellent example of a vernacular form of architecture which was built to take advantage of the hilly topography of the county. These barns are representative of approximately thirty byre and bluff barns identified in a 1984-1985 cultural resource survey of Doniphan County. The remaining barns are too altered and/or deteriorated to be included in this nomination. Most of the nominated barns were constructed for stock and dairy cattle and remain in active use on working farms. The relative rarity of byre and bluff barns in Doniphan County and the high degree of architectural and structural integrity maintained by the nominated barns make this thematic grouping of vernacular agricultural structures extremely significant.

Doniphan County (est. 1855) experienced a substantial population increase in the twenty years following the Civil War, with many settlers moving from Ohio, Pennsylvania, Virginia, and Germany. The barn building traditions brought by these settlers combined with the suitable topography contributed to the building of the byre and bluff barn type in Doniphan County. Most of the nominated barns are three-bay, center entrance, gable roof structures with limestone foundations, a full byre, a threshing floor, and a hay loft. There are groupings of period types, such as the board and batten barns with louvered vents from the 1870s and 1880s, the large, gambrel roof barns from 1910s, 1920s and 1930s, and the gradual transition from post and beam construction to plank framing. In 1891 J. D. Walters of the Kansas State Agricultural College called the byre (bank)/bluff barn an "all-purpose barn of the Kansas farmer" in an article entitled "The Barn," which was published in the Quarterly Report of the Kansas State Board of Agriculture. Walters described the bank barn as follows:

It gives a warm basement for the milk cows and cattle, and an accessible second story for the draught animals—for tools, machines, harness, and grain—and a roomy attic, or loft, for hay, straw, and fodder. In many states this form is objectionable for sanitary reasons, but in the dry
