The <u>Merchants National Bank</u> was designed in 1912 by the architectural firm of Purcell, Feick and Elmslie, a major Minnesota proponent of the stylistic concepts of Louis Sullivan and Frank Lloyd Wright.

The structure was originally constructed as free standing on a square base with the West and South (front) elevations exposed to the street. Both are identical, architecturally, except for the copper and brick entrance along Third Street. A significant exterior feature is the deep set street level windows with the huge translucent stain glass curtain walls above. This is an unusual detail similar in concept to Louis Sullivan's reknown Owatonna Bank. Also noteworthy is the rich and well preserved exterior detailing found at the copper crescent over the entry and at the upper building corners where some of the most impressive "Sullivanesque" terra cotta in the Upper Midwest is exhibited. All outside surfaces are faced in red pressed brick.

The exterior along the West and South elevations are original with the exception of the replacement of some glazing on the street level and the reconstruction of the flanking entrance light pedestals.

Due to extensive expansion of banking facilities in 1927, 1946, 1961 and 1971, the original structure became surrounded, so that presently is one section of a modern financial complex. The last renovation period in 1971 included complete restoration of the interior after public and private sentiment changed initial plans to demolish the building. A compatible new section was constructed to the east and the older north addition was refaced for compatibility with the new and original exteriors.

The interior restoration included the reconstruction of the teller's cages, the refinishing of the oak woodwork and the general rehabilitation of the interior, all according to the original architectural drawings and specifications. A false ceiling, added in the 1960's has been removed and lighting has been installed to reflect the design of the original fixtures wherever possible. This includes the reconstruction of six ten foot high brick light standards following original drawings and photographs. Interiors in the newer portions have been designed to provide spatial and architectural continuity throughout the complex.

ATEMENT OF SIGNIFICANCE			1
Designed by th	e Minneanolis ard	chitectural firm of	Purcell Feick
			s the largest and

early twentieth century American architecture, and has received considerable national attention and recognition with its recent restoration program.

Unlike the then prevailing Neo-Classical rural banks, the Merchants National Bank, when designed, typified the concept that "such buildings need not be rigid, formal and lifeless but dignified, functional and economical"1. Despite its geometrical simplicity, its informal interior arrangement and totally American stylistic character, it suffered no loss in stateliness when compared to its more architecturally orthodox counterparts, the waste to waste the process and a the

The basis of this design approach, if not universally practiced at that time, is no less significant, since it is rooted in the design concepts developed by Louis Sullivan and Frank Lloyd Wright in the significant architectural movement known as "Prairie School" or "Chicago School". Both William G. Purcell and George G. Elmslie worked in Sullivan's Chicago office and Elmslie is today credited with some of that firm's most recognized works. Their own work is considered to be the finest of its type to be appreciated in the upper midwest.

Although architecturally significant in its own right, the Merchants National Bank takes on added importance when viewed in the perspective of a surviving style. Many of these structures are being demolished at an ever increasing rate and the Merchants National Bank might well become invaluable not only as an archtype but also as one of the few surviving examples of its kind.
