### **National Register of Historic Places Registration Form**

This form is for use in nominating or requesting determinations for individual properties and districts. See instructions in *How to Complete the National Register of Historic Places Registration Form* (National Register Bulletin 16A). Complete each item by marking "x" in the appropriate box or by entering the information requested. If an item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, architectural classification, materials, and areas of significance, enter only categories and subcategories from the instructions. Place additional entries and narrative items on continuation sheets (NPS Form 10-900a). Use a typewriter, word processor, or computer, to complete all items.

**Narrative Description** 

(Describe the historic and current condition of the property on one or more continuation sheets)

Located 1.7 miles northwest of Oelwein, the Otter Creek Bridge spans Otter Creek in a rural Fayette County setting that has changed little since the structure's period of significance. A description of the structure follows:

Concrete

span number: 2 construction date: 1917 span length: 40.0' construction cost: \$5153.88 total length: 86.0' current condition: good roadway wdt.: 18.0' alterations: none

superstructure: concrete through girder

substructure: concrete abutments, wingwalls and pier

floor/decking: concrete deck

other features: solid concrete guardrails with recessed rectangular panels

Other than maintenance-related repairs, the bridge remains essentially unaltered as it continues to carry vehicular traffic. The Otter Creek Bridge today retains a high degree of integrity of location, design, setting, materials, workmanship, feeling and association.

8. Statement of Significance							
Applicable National Register Criteria (Mark "x" in one or more boxes for the criteria qualifying the property for National Register listing)	Areas of Significance (Enter categories from instructions)						
□ A Property is associated with events that have made a significant contribution to the broad patterns of our history.	ENGINEERING						
□ B Property is associated with the lives of persons significant in our past.							
C Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.	Period of Significance						
B B Bosses and horse California and California and California	(The period of significance is derived						
□ D Property has yielded, or is likely to yield, information important in prehistory or history.	from the original construction date.)						
Criteria Considerations (Mark "x" in all the boxes that apply)	Significant Dates						
Property is:	1917 (construction date)						
□ A owned by a religious institution or used for religious purposes.							
☐ B removed from its original location.	Significant Person (Complete if Criterion B is marked above)						
☐ C a birthplace or grave.	N/A						
□ D a cemetery.	Cultural Affiliation						
☐ E a reconstructed building, object, or structure.	N/A						
☐ F a commemorative property.							
☐ <b>G</b> less than 50 years of age or achieved significance within the past 50 years.	Architect/Builder  designer:    Iowa State Highway Commission  fabricator:    none

Paperwork Reduction Act Statement: This information is being collected for applications to the National Register of Historic Places to nominate properties for listing or determine eligibility for listing, to list properties, and to amend existing listings. Response to this request is required to obtain a benefit in accordance with the National Historic Preservation Act, as amended (16 U.S.C. 470 et seq.).

Estimated Burden Statement: Public reporting burden for this form is estimated to average 18.1 hours per response including time for reviewing instructions, gathering and maintaining data, and completing and reviewing the form. Direct comments regarding this burden estimate or any aspect of this form to the Chief, Administrative Services Division, National Park Service, P.O. Box 37127, Washington, DC 20013-7127; and the Office of Management and Budget, Paperwork Reductions Projects (1024-0018), Washington, DC 20503.

## **National Register of Historic Places Continuation Sheet**

Section Number 8 Page 1 Otter Creek Bridge Fayette County; Iowa

Located northwest of Oelwein, in Jefferson Township, this medium-span concrete bridge carries a gravel-surfaced county road over Otter Creek. The bridge is comprised of two through girder spans, with reinforced concrete substructure, deck and guardrails that double as the girders. The Otter Creek Bridge dates to 1917. In July of that year the Fayette County Board of Supervisors approved the bridge's design by the state highway commission and solicited competitive bids for its construction. When no bids were received, the county resorted to using day laborers to build the structure for a cost of \$5153.88. Since its completion in 1917, the Otter Creek Bridge has functioned in place, in unaltered condition.

"Fayette County has pinned considerable faith to the day labor system of bridge and culvert building and has made good," the state highway commission reported. "This is contrary to the general experience of Iowa counties with day labor work." Among the structural types that the county employed during this period of intense bridge construction was the concrete through girder. Carrying the roadway deck between the two structural beams, the through girder bridge was one of the first standard designs developed by the state highway commission after its re-organization in 1913. Several of Iowa's counties built through girder bridges in the 1910s. The advantage of this structural type was that it required less clearance between the roadway and the high water mark than did the deck girder. Its disadvantages were that it required slightly more material than the deck girder and it was not as flexible: with the structural members above the deck, the through girder could not be widened later. Ultimately the disadvantages outweighed the advantages, and the through girder was phased out of common use in Iowa by the early 1920s. Most of the state's through girders are relatively short, single-span structures over minor watercourses. A handful of two-span girders remains in Fayette County, however, of which the Otter Creek Bridge is a well-preserved example. It is a typically configured example of ISHC standard concrete through girder design, distinguished somewhat by its two-span configuration.
