STATEMENT OF SIGNIFICANCE

The industrial economy of Alabama was founded upon the manufacture of iron and steel which originated in the early 1800's with very crude blast furnaces. They were made of stone and located in the proximity of an ore bed, a stream to furnish water power, an abundance of wood for burning into charcoal, and a hillside against which is built a trestle so that the furnace could be charged. This necessitated that the location of these early furnaces be some distance from existing settlements; therefore, small selfcontained communities arose around them. Log houses were built to house the labor, and a small store was opened and operated by the ironmasters.

Such a site is that occupied by Tannehill Furnaces. Tannehill Furnace #1, built in 1859, is the seventh such furnace in Alabama; Tannehill Furnace #2, built in 1863, being the sixteenth installation to be constructed.

In 1829, many years prior to the construction of Furnace #1, a forge operation was begun at Tannehill. The land had been acquired by Abner McGehee from the U. S. Government. McGehee engaged Daniel Hillman to erect the forge and to operate it. In 1840 the property was sold to Ninion Tannehill and J. B. Green. Four years later Greek sold his interest to Tannehill.

Although there is some evidence that Moses Stroup, a widely-known ironmaster of the day, built a blast furnace at the forge site in 1855 after the property had passed into the hands of John Alexander, it is not mentioned in the official records until four years later in 1859.

The early-day furnace produced not over five or six tons a day. Slaves dug brown hematite ore from open pits on the Goethite deposit and hauled it two miles to the furnace bank, the first evidence of strip mining in Alabama. Later a little tramway, the remains of which can still be seen, was built for this purpose. Wood was cut from nearby pin e forests and burned in dust pits. More than 3,400 acres of heavy birgin timber was consumed in making charcoal to fire the operation during its 35 years of existence.

Pig iron produced here cost \$17.40 a ton in 1859 just prior to the outbreak of the Civil War.

In 1862 the furnace was sold to William L. Sanders who, given a \$50,000 advance in Confederate bonds, built the second furnace and put in a steam plant to take the place of the unreliable water power. Although the expanded iron works was supplied with skilled labor from the Confederate Army, the

8. Significance continued

price for a ton of No. 1 cold blast pig iron rose to \$160 by 1864.

The plant operated continuously until the final months of the Civil War making cannon balls, gun barrels, ordnance pots, pans and skillets for Southern troops.

The end for the little iron works, however, was in sight with the advancing of Union forces into Alabama. On March 31, 1865, Capt. James A. Sutherland was detached by Brig. Gen. John T. Croxton, commander of the First Brigade under Maj. Gen. James H. Wilson, to march on the furnaces, destroy them, rejoining the detachment for the advance upon Tuscaloosa.

Three companies of the Eighth Iowa under Sutherland <u>burned Tannehill's</u> cast houses, tramways, trestles, and nearby settlement houses, but left intact the two huge stone furnace stacks, which still stand today.

Late in 1865 Alexander bought back the burnt-out furnaces from Sanders and may have planned to rebuild them but failed to do so. In 1868 he sold the property to David Thomas and in that manner it fell into the hands of the Republic Steel Corporation. The furnace site was later turned over to the University of Alabama with an eye toward preservation of the historical old iron producer, but somehow the project fell by the wayside.

In 1969 the University of Alabama deeded the 66-acre preserve to the Tannehill Furnace and Foundry Commission for purposes of a park. Under the direction of the Commission, the park was opened on a limited scale on June 5, 1971. Considerably more restoration is planned at Tannehill.
