NPS Form 10-900 (Oct. 1990)

United States Department of the Interior National Park Service

National Register of Historic Places Registration Form

This form is for use in nominating or requesting determinations for individual properties and districts. See instructions in How to Complete the National Register of Historic Places Registration Form (National Register Bulletin 16A). Complete each item by marking "x" in the appropriate box or by entering the information requested. If an item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, architectural classification, materials, and areas of significance, enter only categories and subcategories from the structural processor, or complete all items

Narrative Description

(Describe the historic and current condition of the property on one or more continuation sheets)

Located 2.3 miles southwest of Manilla, the Nishnabotna River Bridge spans the Nishnabotna River in a rural Crawford County setting that has changed little since the structure's period of significance. A description of the structure follows:

span number: 1 construction date: c1945 span length: unknown total length: unknown roadway wdt.: unknown alterations: construction date: c1945 unknown construction cost: unknown fair none

superstructure: steel, 14-panel, rigid-connected bowstring pony arch-truss substructure: timber pile bent piers and abutments with timber backwalls

floor/decking: timber deck over steel stringers

other features: arch rib: 2 angle; lower chord: 2 angles; vertical: 2 angles with 2-angle outriders;

diagonal: 1 angle; lateral bracing: round rod with threaded ends; floor beam: I-beam;

no guardrails

Other than maintenance-related repairs, the bridge remains essentially unaltered as it continues to carry vehicular traffic. The Nishnabotna River Bridge today retains a high degree of integrity of location, design, setting, materials, workmanship, feeling and association.

10. Geographica	I Data				
Acreage of Prope	erty less than one acre				
UTM References (Place additional UTM	references on a continuation sheet)				
1 15 31188 zone easting	0 4637260 northing	2 zone easting	northing		
Verbal Boundary (Describe the boundari	Description es of the property)				
The nominated property is a rectangular-shaped parcel with unknown measurements, centered on the UTM point(s) listed above. Included within this rectangular parcel are the bridge's superstructure, substructure, approach spans and floor system.					
Boundary Justification (Explain why the boundaries were selected) The nominated structure includes the bridge's superstructure, substructure, floor system, any approach spans and the property on which they rest. These boundaries encompass, but do not exceed, all of the property that has been historically associated with the bridge.

Paperwork Reduction Act Statement: This information is being collected for applications to the National Register of Historic Places to nominate properties for listing or determine eligibility for listing, to list properties, and to amend existing listings. Response to this request is required to obtain a benefit in accordance with the National Historic Preservation Act, as amended (16 U.S.C. 470 et seq.).

Estimated Burden Statement: Public reporting burden for this form is estimated to average 18.1 hours per response including time for reviewing instructions, gathering and maintaining data, and completing and reviewing the form. Direct comments regarding this burden estimate or any aspect of this form to the Chief, Administrative Services Division, National Park Service, P.O. Box 37127, Washington, DC 20013-7127; and the Office of Management and Budget, Paperwork Reductions Projects (1024-0018), Washington, DC 20503.

Section Number 8 Page 1 Nishnabotna River Bridge Crawford County; Iowa

During World War II the War Department developed a "Priorities Critical List" of materials deemed essential to the war effort. As a component of almost every major piece of war materiel, steel was, of course, included on the list, making the construction of steel bridges problematic for Iowa's counties. In response, most of the counties reverted to timber construction for their small-scale bridges, and timber pile bridges outnumbered all other types by a substantial margin in the 1940s. Crawford County, too, relied on timber construction, until heavy flooding in May 1945 washed out 27 bridges and culverts in the county. The county board of supervisors resolved to build new bridges using emergency funds, purchasing several steel superstructures from the Des Moines Steel Company as replacement spans. Apparently designed by Council Bluffs civil engineer H. Gene McKeown, these structures featured a bowstring arch-truss configuration, with the upper chord in compression and the lower chord in tension to resist the springing action of the curved upper chord (although the all-riveted construction made this action structurally indeterminate). The trusses employed only smallprofile steel angles for the web members. They employed angled gusset plates to which the vertical and diagonal members were riveted to the chords. Each web was fabricated in the shop in two halves and field-bolted at the site by a county work force. The trusses were carried by relatively simple bearing shoes, and angle outriders provided lateral support for the truss webs. This span over the Nishnabotna River southwest of Manilla was one of several such hybrid trusses built by Crawford County during the war years. Comprised of the riveted truss, supported by a timber substructure, the Nishnabotna River Bridge remains in unaltered condition today. It, like the five other, almost identical spans that remain in Crawford County, is a noteworthy example of wartime bridge construction in Iowa.
