National Register of Historic Places  
Registration Form

This form is for use in nominating or requesting determinations for individual properties and districts. See instructions in *How to Complete the National Register of Historic Places Registration Form* (National Register Bulletin 16A). Complete each item by marking "x" in the appropriate box or by entering the information requested. If an item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, architectural classification, materials, and areas of significance, enter only categories and subcategories from the instructions. Place additional entries and narrative items on continuation sheets (NPS Form 10-900a). Use a typewriter, word processor, or computer, to complete all items.

1. Name of Property

historic name Lee Creek Bridge

other names/site number Bridge #19094 / Site # CW0395

2. Location

street & number West of West Rena Road over Lee Creek

Historic Bridges of Arkansas

Section number 7

Page 1

### Summary

The Lee Creek Bridge is located just west of a new Rena Road bridge crossing Lee Creek, just north of I-40. It is approximately two and half miles northwest of downtown Van Buren, Arkansas. Its primary span, a 126 foot Pratt thru truss, is accompanied by two Warren pony trusses, comprising a total 296 foot span.

### Elaboration

The Lee Creek Bridge consists of a single pin-connected, seven panel Pratt thru-truss span measuring 126 feet and two Warren pony-truss spans for a total structure length of 296 feet. Three original stone piers support the bridge. Two are stone and the southernmost was replaced with concrete from a partial reconstruction in 1930. The fourth pier, between the two Warren trusses, was built out of concrete and added in 1930. The deck width is 10.8 feet, with a vertical clearance of 12 feet. The bridge is accessed from both the north and south.

The Pratt truss was first developed by Thomas and Caleb Pratt in 1844, and contains diagonals in tension and verticals in compression, while the Warren truss, which was patented in 1848, has diagonals that carry both compressive and tensile forces. The bridge carries its traffic load level with the bottom chords.

### Integrity

The primary span Pratt thru-truss from 1898 is accompanied by two Warren pony trusses to the south, built in 1930 to replace an original second Pratt thru-truss. Now closer to encroaching suburban development, the Lee Creek Bridge was bypassed in 1995 by a modern concrete bridge at Rena Road just to the east. Although no longer in use, the bridge is intact, and it still reflects late-nineteenth century and early twentieth century bridge building technology.

**8. Statement of Significance****Applicable National Register Criteria**

(Mark "x" in one or more boxes for the criteria qualifying the property for National Register listing.)

- ☒ **A** Property is associated with events that have made a significant contribution to the broad patterns of our history.
- ☐ **B** Property is associated with the lives of persons significant in our past.
- ☒ **C** Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
- ☐ **D** Property has yielded, or is likely to yield, information important in prehistory or history.

**Criteria Considerations**

(Mark "x" in all the boxes that apply.)

Property is:

- ☐ **A** owned by a religious institution or used for religious purposes.
- ☐ **B.** removed from its original location.
- ☐ **C.** birthplace or grave of a historical figure of outstanding importance.
- ☐ **D** a cemetery.
- ☐ **E** a reconstructed building, object, or structure.
- ☐ **F** a commemorative property
- ☐ **G** less than 50 years of age or achieved significance within the past 50 years.

**Levels of Significance** (local, state, national)

Historic Bridges of Arkansas

Section number 8

Page 1

### Summary

The Lee Creek Bridge is being nominated to the National Register of Historic Places under **Criterion A** with local significance for its associations with the development of transportation in Crawford County. As a partially reconstructed bridge, first built in 1898 and rebuilt in 1930, the Lee Creek Bridge was clearly important in the county for a crossing at this point. Its early construction and subsequent renovation allowed the bridge to carry traffic continually until 1995, when population growth and safety concerns necessitated a new crossing, still in the same relative location as the Lee Creek Bridge.

The bridge is also being nominated under **Criterion C** with local significance as a good example of a Pratt thru-truss bridge, a construction technique common on Arkansas roads during this period. As one of two Pratt thru-truss bridges remaining in Crawford County, the Lee Creek Bridge's initial construction is one of only a handful of bridges of this type and age. The bridge is also significant for its Warren pony truss spans.

The Lee Creek Bridge is submitted under the multiple property listing "Historic Bridges of Arkansas" and under associated historic context "Early Transportation Era."

### Elaboration

The arrival of David Boyd, a logger, in 1818 is the first recorded event in Van Buren, a historically significant port along the Arkansas River. Development of a town site in present day Van Buren, Arkansas, began in earnest in the 1830s with the establishment of Phillips Landing by Daniel and Thomas Phillips in 1831, a wood yard supplying fuel for river steamboats. In the same year, a post office named for recently nominated Secretary of State Martin Van Buren was opened, lending the township its name.<sup>1</sup>

Just a mile down the River, John Drennen and David Thompson established one of two general stores in a settlement called Columbus, remaining there until 1835. Realizing Van Buren was a better site for a town, Drennen bought the site from Thomas Phillips for \$11,000 in 1836. Drennen later represented Crawford County in the Constitutional Convention, helping to write the state constitution for Arkansas. With Drennen's donation of land for the courthouse, Van Buren became the county seat in 1841.<sup>2</sup>

Page 2

Situated on the Arkansas River near the Oklahoma border, Van Buren developed throughout the nineteenth century as Arkansas's westernmost transportation center. Steamboat lines, and later stagecoaches and rail served the city of Van Buren. The coach route between Little Rock and Van Buren was among the best patronized land route across Arkansas in the early 1800s. In the 1849 California gold rush, these water and land routes were strained as Van Buren and Fort Smith served as taking-off points for thousands.<sup>3</sup>

Commerce continued to develop steadily thanks to river and train traffic through Van Buren. The first newspaper in Northwestern Arkansas, *The Intelligencer*, was first printed in 1842, an extremely early date for a township that far west.<sup>4</sup> By 1878, Van Buren boasted a dozen general stores and numerous other businesses serving Crawford County citizens and the growing number of travelers passing through.<sup>5</sup>

After the Civil War, railroad transportation furthered the growth of Van Buren as a transportation hub. The Little Rock and Fort Smith Railway, led by president John Drennen, brought the first train to Van Buren on June 24, 1876. The Missouri-Pacific and Frisco Line railroads carried passengers and cargo through Van Buren, transferring goods across the Arkansas River on flat-bottom river boats to Fort Smith.<sup>6</sup> Ferries connected Fort Smith and Van Buren over the Arkansas River until 1912, when the "free bridge" was built between the cities, carrying passenger streetcars across the river until the 1930s.<sup>7</sup>

The Lee Creek Bridge was constructed along one of the unpaved county roads that connected most of Crawford County to the county seat in Van Buren. First constructed in 1898, two Pratt thru-trusses crossed Lee Creek at this site. The Lee Creek Bridge carried traffic from Dora, Arkansas, and farmsteads west of town to the main road into Van Buren. The southern Pratt truss was replaced by two Warren trusses and a new pier in 1930.<sup>8</sup> Records

Page 3

from 1936 show this county road was graded, but still unpaved at this time, as were most of the routes traversing Crawford County.<sup>9</sup>

Used continuously until the 1990s, the Lee Creek Bridge had over 500 daily crossings by 1987. Now close to encroaching suburban development, the bridge was deemed structurally unsound and bypassed in 1995 by a modern concrete two lane bridge over Lee Creek at Rena Road less than 100 feet away. Lee Creek Bridge is now closed to all traffic.<sup>10</sup>

The 1930 reconstruction of the Lee Creek Bridge with a Pratt thru-truss and Warren pony-truss combination was highly unusual for roadways built at this time. By the late 1920s, deck girder bridges (either concrete or metal), or Parker pony trusses to a lesser degree, were the norm for new bridge construction on Arkansas state highways. In fact, data from the Arkansas State Highway and Transportation Department shows that nearly \$0.23 on the dollar was spent on concrete for bridge construction by 1930, while only \$0.02 was spent on structural steel.<sup>11</sup> The Lee Creek Bridge is one of 25 remaining truss bridges built during the 1930s in Arkansas. Its original structure dating from the 1890s is one of less than five surviving bridge structures built before 1900 in Arkansas. The two periods of construction and atypical structure of Lee Creek Bridge set it apart as an important and unique example of this type of structure.<sup>12</sup>

### Statement of Significance

The Lee Creek Bridge is being nominated to the National Register of Historic Places under **Criterion A** with local significance for its associations with the develop[ment] of transportation in Crawford County. As a partially reconstructed bridge- first built in 1898 and rebuilt presumably after a flood or accident in 1930, the Lee Creek Bridge was clearly important in the county for a crossing at this point. Its early construction and subsequent renovation allowed the bridge to carry traffic continually until 1994, when population growth and safety concerns necessitated a new crossing, still in the same basic location as the Lee Creek Bridge.
