Significance

(Indicate sources of information for all statements)

20. Architectural significance

a. Key structure/individually may qualify for the National Register

□ b. Contributing structure

C. Not eligible/intrusion

N/A

Continuation of 14. Integrity.

Interior - stalls & pew facing central silo. Concrete foundation. lst floor cement block. Gambrel roof. Diameter - 65'. Siol - wood stave. 16'. Wood shingles. Owner indicates a large metal cupola was taken down several years ago after a windstorm, but is still preserved in the hay loft.

21. Historical Significance Theme(s) True-Round; Illinois/Crouch type.

a. Key structure/individually may qualify for the National Register

□ b. Contributing structure

C. Not eligible/intrusion

The true-round form, central silo, circular interior arrangement, and self-supporting single hip gambrel roof characterize this barn as an Illinois Agricultural Experiment Station / H.E. Crouch type. A 1910 bulletin from the Illinois Ag. Exp. Station successfully promoted the round barn and is responsible, directly or indirectly, for influencing the design of many round barns throughout the midwest. An exception to the Illinois prototypes, this barn is constructed of heavy timber with interlocking joints rather than of wood ballon frame. The low pitch of the roof is a slight variation from other barns of this type.
