Architectural Classification Other/Segmented arch in concrete

Materials

foundation	<u>N/A</u>
roof	<u>N/A</u>
walls	<u>N/A</u>
other	<u>superstructure - concrete</u> <u>substructure - concrete</u>

Narrative Description

Mavilla Bridge is located on kilometer 17.7, route 159, between Corozal and Bayamón (Photo 1). The apex of its arch rises some 50 feet above the level of the Mavilla Creek. The masonry work is unusual: a row of stones simulating ring stones directly over the concrete vault, and spandrel walls of somewhat irregular ashlar masonry. This bridge has suffered no significant alterations other than the addition of the present balustrade in 1909. Its setting is essentially similar to the one prevailing in its period of significance. The bridge retains a high degree of integrity of design, workmanship, feeling, association, materials, and setting. A description of the structure follows:

span number:	1	superstructure:	concrete
span length:	25.5 meters	substructure:	concrete
total length:	25.5 meters	construction date:	1903
roadway wdt.:	4.60 meters	alterations:	1909
		current condition:	very good

=====
8. Statement of Significance
=====

Applicable National Register Criteria

- A Property is associated with events that have made a significant contribution to the broad patterns of our history.
- B Property is associated with the lives of persons significant in our past.
- C Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
- D Property has yielded, or is likely to yield information important in prehistory or history.

Criteria Considerations

- A owned by a religious institution or used for religious purposes.
- B removed from its original location.
- C a birthplace or a grave.
- D a cemetery.
- E a reconstructed building, object, or structure.
- F a commemorative property.
- G less than 50 years of age or achieved significance within the past 50 years.

Areas of Significance: engineering, transportation

Period of Significance: 1903-1944

Significant Dates: 1903, 1909

Significant Person: N/A

Cultural Affiliation: N/A

Architect/Builder: Roque Paniaqua, contractor/ José García-González, contractor

Narrative Statement of Significance

The Mavilla bridge was built in 1903 to substitute a wooden structure from 1853 servicing an old 19th century Toa Alta-Bayamón unpaved road. Eighty men worked under Roque Paniagua on the construction of the bridge which cost \$3,000.00. In 1909, contractor José García-González added a concrete balustrade at a cost of \$644.00. It is the earliest extant long-span concrete arch bridge and one of the most attractive.

For further contextual information regarding bridge building in Puerto Rico, registration requirements, and property types, see related multiple property listing "**Historic Bridges of Puerto Rico**".

10. Geographical Data
=====

Acreage of Property less than one acre

UTM References Corozal Quadrangle PR 7.5 minute series:
18°21'52"N/ 66°18'17"E

Verbal Boundary Description

The nominated property is a rectangular shaped parcel measuring 25.5 X 4.60 meters, which is centered on the coordinates listed above. Included within this rectangular parcel are the bridge's superstructure, substructure and floor system.

Boundary Justification

The nominated structure includes the bridge's superstructure, substructure, floor system, any approach spans and the property on which they rest. These boundaries encompass, but not exceed, all of the property that has been historically associated with this bridge.
