decided merit, but for detailed information reference is again made to the state publications.

The gold and silver production of the state up to the present time is about as follows:

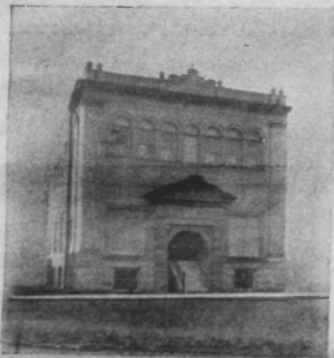

Up to 1865 estimated as about	\$ 50,000,000
From 1866 to 1875 about	28,700,000
1876	1,100,000
1877 to 1899 about	29,400,000
1900 to 1914 about	18,500,000

Total

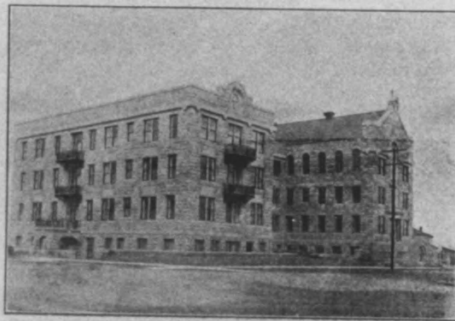

\$128,000,000

The many old placer mining camps after the exhaustion of the

bench gravels became dormant, but in most instances the gravels of the river and creek bottoms remained intact, as they did not afford the placer miner of old the grade necessary for the disposal of the waste rock. Since the perfection of the gold dredge in California and elsewhere these flat stream gravel deposits in Eastern Oregon have attracted the attention of dredge men, the first modern installation of this type in this neighborhood is the dredge of the Powder Valley Dredging company below Sumpter. The dredge has buckets of nine cubic feet capacity, close connected type and digs into the ground about 15 feet deep, with an approximate monthly output of \$30,000. There is reason to expect that the next few years will see several more dredges successfully established in Eastern Oregon.

Elk Beautiful \$50,000 Home, Baker.

St. Elizabeth Hospital, Baker.

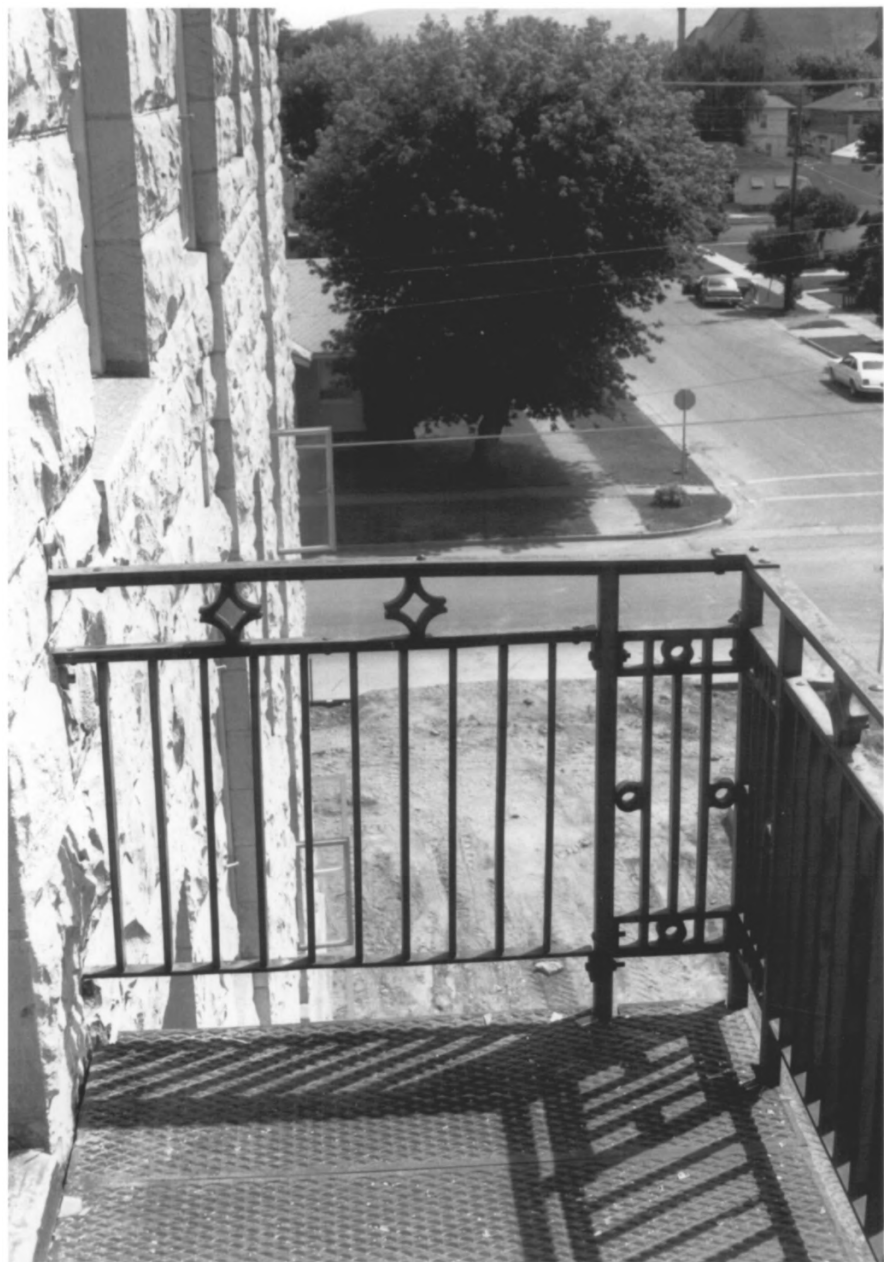

Sumpter Valley Railway Reflects Local Conditions.

General conditions throughout the country were not reflected in the resources of the Sumpter Valley Railway which is a line that runs from Baker into the timber and prairie country, up the gorge of the Powder River and over the three mountain ranges into the headwaters of the John Day.

part of the groceries which are the low class freight were supplied by Baker Dealers, whereas shippers at other points supply the John Day country with the less substantial and higher rated commodities.
