Describe the present and original (if known) physical appearance

The Newby-Bick house is located on West 116th Street, approximately one mile west of State Road 31. The residence stands on its original site surrounded by a grove of large maple trees, walnut trees, and one of the largest pear trees in the state (according to a local nurseryman). The house was constructed on the highest point of the site with ground sloping away on all four sides. The structure was purchased in 1980 by Dr. and Mrs. Stewart E. Bick, who have meticulously restored the house for their home.

Although the structure was in some disrepair, 95 percent of the architectural elements and 80 percent of the glass are still in existence and, for the most part, sound. Fortunately, the house never received an addition, although some updating had occurred within the structure in the form of plumbing, heating and wiring.

The architectural concept reflects elements of a simplified Italianate design. There are two porches facing west. Both retain original ornate architectural detail expressed in the posts, bracketing, and jigsaw work below the entablature. The entrance porch floor was originally wood but has since been replaced with brick. The west porch with the wood floor has been screened in.

Exterior doors are original and screen doors have been restored and/or replicated to the original designs. All doors are topped with transoms, both inside and out. Fenestration consists of, for the most part, matching two-light double-hung windows, cased on the exterior with 1 x 4 trim at the jambs. Head trim consists of a 1½" x 5" lintel capped with a heavy molded drip cap.

The house is covered with 1 x 5 inch poplar lapped siding, terminating at the corners with 1 x 4 corner boards topped off with a molded capital supporting two ornate brackets which, together with other symmetrically placed brackets, support the soffit of the roof overhang. The roof is a low pitched hip type, except for the shed roof across the rear of the structure. The shed roof overhang is also bracketed on the east and west elevations. The original is believed to have been slate; however, it has been replaced with asphalt shingles in a slate color.

The house is erected on a split fieldstone foundation with stones taken from the farm site. The house is painted, using Victorian colors with color contrast between the siding, corner boards, window trim and porch detailing.

Records indicate that the farm was acquired in August, 1871, by Micah Newby from his father, John Henley Newby. Although no precise date of construction is known, Ovid Newby, grandson of Micah Newby, documented that his father, John Absalom Newby, born 1877, was age four when the family finished the house. The old Clay Center School formerly stood directly across 116th Street, but was demolished about 1956.

During restoration of the building, while investigating the fabric, it was discovered that the house was framed in oak cut from the farm. The exterior walls are of balloon type construction and are sheathed with diagonal boards, several of which are up to 36" in width and are of native poplar. Tongue and groove, 1 x 6 flooring in the house is yellow pine. Ninety-five percent of the hardware is original, both the box locks on the exterior doors, and sash locks at the windows. Sash locks are dated May, 1872. Box locks on exterior doors are dated July 21, 1853. Interior trim in main rooms of the house consists of 1" x 5" casings topped with a cap mold at heads. Transom hardware is pivoted type.

The floor plan is a "T" shape and symmetrical except for the two porches on the west and the shed roof wing to the rear.

Statement of Significance (in one paragraph)

The Micah Newby house is significant as a good example of the Italianate style in a rural balloon frame structure, and as the former home of Micah Newby, a successful entrepreneur and one of the first farmers in central Indiana to identify and develop a market for the mass production of butter.

Micah Newby was born December 18, 1837, in Hancock County, Indiana. He was married to Emily Pritchett Elliot and they had five children. About 1871 Newby acquired the first 40 acres of his farm from his father for \$500.00. He first constructed a log cabin and large dairy barn, and lived in the cabin while the house was being constructed. Newby acquired additional acreage in 1886, bringing his total holdings to 147 acres.

Newby designed and built his simplified Italianate house about 1880, and continued to live there until his death in 1926. Despite its age, the house retains most of its original integrity and fabric, having never been significantly altered or remodeled. The barn was later converted into a residence and is now under separate ownership.

Besides being one of Indiana's first mass producers of butter, Newby was also the primary marketer of butter in Indianapolis.¹ He had dozens of dairy cows and also bought extra milk from local farmers. Newby made two to three trips per week to Indianapolis to sell his butter to merchants. Most of his farm was devoted to raising feed for his large dairy herd.

Newby's attention to his home also applied to the land. He landscaped the property adjacent to the house with native trees, including sugar maple, black walnut, persimmon, crabapple and pear. Today, many of the trees are still alive and fully matured. According to local nurserymen, a 65 foot pear tree, measuring 9'8" in circumference, is one of the largest in the state.

Members of the Newby family, including John Absalom Newby and his wife, continued to live in the house for some time after the death of Micah and Emily Newby. The house later had several owners before being purchased by the Bicks in 1980.

Continuation sheet Micah Newby House Item number 7 Page 1

The basement is accessible through a hatchway located in the floor of a small storage room next to the kitchen to the north. The excavated area occurs only under the dining room and present family room. Ceiling height is low, measuring approximately 5'6" to 5'8", floor to underside of joists. The exterior walls and two interior bearing foundation walls are hand split fieldstone. 6" x 8" hand hewn plates rest on the foundation walls and are oak notched to receive the first floor joists. Joists vary in size but are largely 2½" x 7" rotary cut and in sound condition. There is no evidence of dryrot or termite damage. The floor is concrete.

The plan layout consists of a front or north parlor backed by a dining room on the west (offset) and a stairway and bath on the east. To the rear is a kitchen on the east and a family room on the west, both under the shed roof area of the rear of the house.

The second floor plan generally follows the first floor plan in layout, consisting of the three bedrooms and one bath. To the rear over the kitchen is a child's room under the shed roof area with an open end to the west which looks down into the family room from the loft area.

The structure is in excellent condition and an asset to its rural environment.

Interior alterations are as follows:

First floor. Period cabinets have been placed on the east wall of the north room; a shower has been placed in the east bedroom which is now the bath; wood paneling has been placed and painted in the dining room and the southwest family room; and a brick hearth has been added to accommodate a wood stove which uses the original stove port.

Second floor. The north and center bedroom closets have been enlarged using the original doors; the east bedroom has been bisected to form an upstairs bath and a smaller bedroom; and the west side of the attic area under the hip roof has had the floor removed and a loft placed which overlooks the southwest lower level room.

Foundation. The original boiler door to the Clay Center School was placed in the foundation as a crawl space door in 1928.

The present studio building on the property was built as a garage in 1930. It was built by Micah's son, John, of ceramic block from Brazil, Indiana. It has a concrete floor. It was used as a rendering house, as well as a garage. The chimney in the garage was for that purpose. The Bicks have renovated it to a studio, adding windows which originated from an early (1910-20) Indianapolis schoolhouse and clapboarded the exterior similar to the main house. Dr. Bick designed and built the double doors to appear in design like the original barn door.

The former barn (now a residence) is adjacent to the nominated property, but is under separate ownership.
