National Register of Historic Places
Registration Form

NATIONAL REGISTER

This form is for use in nominating or requesting determinations of eligibility for individual properties or districts. See instructions in *Guidelines for Completing National Register Forms* (National Register Bulletin 16). Complete each item by marking "x" in the appropriate box or by entering the requested information. If an item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, styles, materials, and areas of significance, enter only the categories and subcategories listed in the instructions. For additional space use continuation sheets (Form 10-900a). Type all entries.

1. Name of Property

historic name Pfeiffer, John Gottlieb, House
other names/site number N/A

2. Location

street & number 931 3rd Avenue NW N/A not for publication
city, town Faribault N/A vicinity
state Minnesota code MN county Rice code 131 zip code 55021

3. Classification

Continuation SheetPfeiffer, John Gottlieb, House
Section number 7 Page 1

The John Gottlieb and Magdalena Remund Pfeiffer House built in 1868, is a detached two story vernacular dwelling constructed of locally quarried limestone and displays Federal style detailing in the symmetry of design, corner quoins and in its ca. 1930 classical entry. The house is set upon a cut limestone foundation with a limestone water table. Its box-like massing displays random ashlar masonry, symmetrical fenestration and finely rusticated corner quoining. Windows are double wood sash, some with older two-over-two lights, and others with a more recent one-over-one light configuration. As in other stone residences of its kind in Faribault, windows are set into interior bevelled wall openings with flush exterior stone lintels and projecting sills. The truncated hipped roof is finished with asphalt shingles and plain boxed eaves.

The federal style front entry is composed of four square wood posts and a simple second story balustrade with square balusters. Sanborn fire insurance maps indicate that this entry replaced an earlier single story wood frame porch sometime after 1930. The renovation of older houses with colonial and federal revival embellishments was common throughout the United States during the 1930s. The alteration does not, however significantly impact the original design or construction of the house. It also does not significantly detract from the ca. 1870 vernacular characteristics that mark this house as one of Faribault's earliest and finest; use of locally available building materials, simple massing, labor intensive building techniques and early construction date.

A two story wood frame and clapboard addition was built in two phases onto the rear (east) elevation some time in the 1940s. It obscures the original rear entry at approximately the center of that elevation as well as a second story window at the south end of the elevation (now a door to the frame addition).

The location of the addition on the rear facade minimizes the visual impact of the construction and did not significantly alter the original material integrity of the

house. A later constructed non-contributing frame garage sits on the back, east end, of the lot.

8. Statement of Significance

The Pfeiffer House is significant within the context of the period of early settlement (ca. 1855-1875) in Faribault. This period encompasses roughly the first twenty years of settlement and corresponds to the Minnesota State Historical Society's *Early Agriculture and River Settlement* context. Within that broad context, the Pfeiffer House is specifically significant as a particularly well preserved example of the type of vernacular native stone housing built by Faribault's working class during the early settlement days. It is also significant for its association with stone cutter and mason, John Gottlieb Pfeiffer, who is recorded as having built or supervised the building of some of Faribault's most outstanding native stone buildings.

Faribault's early settlement period was marked by the rapid influx of a variety of ethnic groups, both Yankee and European, and the establishment of the early local economy. That economy included a mix of local businesses including drygoods and hardware stores, clothing stores, meat and grocery markets, drug stores, boot and shoe shops, a wagon and sleigh building shop, furniture stores, restaurants and saloons, livery stables and blacksmith shops. This period also witnessed the development and the decline of the highly competitive milling (lumber, wool, and flour) industry along the Straight River Valley. Another of Faribault's earliest industries was the quarrying of stone. The variety of limestone that was quarried in this locale was eventually shipped throughout the region and was used for homes, churches and public buildings. The stone also comprises the building material of some of Faribault's earliest buildings. Faribault's later role in the regional economy was nurtured with the arrival of the first railroad in 1865 and the beginning expansion of trade outside the immediate vicinity of Faribault.

The rapid immigration to and formation of an economy in Faribault was owed to a location that initially brought settlers into Rice County via steam travel up the river valleys. As early as 1855, Faribault found itself at the intersection of an early network of roads including the Lake Pepin, Spirit Lake, Dodd (and St. Paul), and Hastings roads that brought immigrants from all directions. Faribault's strategic location on the

Straight River and at the intersection of new roads, combined itself with an environment of bountiful waterways, hardwood forests, and farmland, and drew settlers who saw the potential for entrepreneurship and a better life.

The arrival of many ethnic laborers in Faribault, among them Irish and German stonemasons, influenced the design and material of many of Faribault's earliest buildings. Having come from areas in Europe with stone building traditions, these local builders continued to use their masonry skill and sense of design in many of Faribault's most handsome and well-constructed buildings.

The simple plan, modest size and minimal decoration of the Pfeiffer House is typical of the type of early settlement housing built by stone masons in Faribault. Because the house was built ten years after Pfeiffer settled in Faribault, the Federal design, though austere, probably represents the kind of house he aspired to. Although a rather late example, the Pfeiffer House characterizes the Federal style by its box-like plan, low pitched roof, and windows aligned horizontally and vertically in symmetrical rows. There are twelve other extant stone vernacular houses in Faribault, all built by working class families after an initial period of establishment within the Faribault economy. All exhibit simple plans, minimal stylistic embellishment, and labor intensive building techniques. They are distinctive for their flush stone lintels, protruding door and window sills, interior beveled window openings and approximately 20-inch deep walls.

John Gottlieb Pfeiffer's life history and career as a stone cutter in Faribault is representative of other early working class laborers who plied their trades and raised families in the city. Pfeiffer (1831-1904) immigrated from Wurttemberg, Germany to the United States in 1853. Once here, he utilized his stone-cutting skills in New Jersey and Pennsylvania for two years before arriving in Hastings, Minnesota, a common point of entry to southeastern Minnesota from eastern states.

Pfeiffer was employed as a stone-cutter in Faribault as early as 1856, traveling between there and his home in Waseca. Examples of his work in Faribault include the Cathedral of Our Merciful Saviour (1862) and its tower (1901) and the Immaculate Conception Church (1901). He also is reputed to have supervised the cutting on the Minnesota Institute for the Deaf, Dumb and Blind Building (no longer extant) and other unidentified public and state buildings in Faribault.
