DESCRIBE THE PRESENT AND ORIGINAL (II known) PHYSICAL APPEARANCE

This house was built in 1806 for Joseph Haile, a mason, and is a free-standing, <u>four-square</u>, <u>brick townhouse typical of the federal period</u>. It is unusually tall, however, having <u>three-and-a-half stories as well</u> as a high basement due to its hillside location. It is in excellent condition, thanks to the careful restoration undertaken by <u>Dr. and Mrs.</u> <u>George Warren Gardner in the 1930's and to the endowment they provided</u> for its maintenance. They added the fine one-story Ionic entrance porch of wood (either carefully copied or else salvaged from a house of the correct period) on the south, or front, elevation. They were responsible, too, for the addition of almost all of the splendid interior woodwork, which is of a quality equal to or greater than that which the house originally had possessed.

The house faces south on George Street, and its main block measures 40 feet by 38 feet. The windows of the <u>five-bay</u> front are capped by flat brick arches and are vertically graduated in size. The foundations are of brick on the front and of stone on the sides. The unpedimented Ionic entrance porch is on a brownstone platform and has fluted front columns with pilaster responds, and a full entablature surmounted by a turned balustrade. The doorway has an elliptical leaded fanlight and sidelights with a leaded arrangement of alternating oval and flareddiamond motifs.

The house currently has four chimneys: three in the outside walls of the block of the house and one in the <u>two-story wooden wing</u> to the rear, which was added <u>sometime after 1817</u> but probably not later than <u>1850</u>. It is more than likely that originally there was a fourth chimney in the main block of the house, located on the northwest back section and corresponding to the chimney remaining on the northeast back. Above a molded and dentilled cornice, a hipped roof carries a high and roomy monitor.

Within, the house was originally of the four-room, <u>center-hall</u> plan. Each room had its own fireplace and chimney, one each in the west and east (side) walls and two in the north (back) wall. The first floor was modified by the Gardners, who removed and the dividing wall between the two western rooms to create one large library-living room with a rear entrance hallway behind it on the northwest. They also added the arched window at the end of the central hallway. The parlor and dining room, at the southeast and northeast respectively, remain as they probably were originally. The kitchen in current use occupies the wing to the rear at first-floor level, although the original basement kitchen has been reconstructed with plaster walls, exposed summer beam and corner posts, slate floor, and wide hearth.

In the central hallway the staircase rises in an open well in a raceful L-shape with a short leg at the top. It is entirely original,

7. Description.

with an open string, delicate sawn scroll step-end ornaments, a handsomely molded handrail, and simple rectangular balusters, three to a step. Fedrooms, largely following the plan of the first floor, occupy the second, third, and fourth floors.

Outstanding in this house is its woodwork: its staircase, molded chair rails, cornices, and fireplace treatments. A few of the cornices-molded, fretted, dentilled, or reeded--are original to the house. (Notable is the heavy bolection-molding cornice in the central hall.) Most of the door and window surrounds are original; but the fireplace treatments, at least on the first and second floors, are not, and were installed by the Gardners, who rescued from the wrecking companies of Providence the mantels, overmantels, surrounds, and tiles of appropriate period which were used to restore these in the 1930's.

The fireplace in the living room, with its molded crossetted surround, molded mantel shelf above a fret, and its Delft tiles, is perhaps the finest in the house. The fireplace in the dining room is also a fine one, with its marble facing, its high panelled entablature in the mantel, and its simple panelled overmantel. In the parlor the fireplace displays engaged colonnettes and a projecting molded mantel shelf with reeded fascia. The cornices in these two rooms are skillfully coordinated with the woodwork and fireplace treatments--delicately reeded in the dining room and heavily dentilled in the parlor. On the second floor, the southwest bedroom deserves mention for its bolection-molding cornice, panelled interior shutters, and fine fireplace treatment with a simple columned mantel and a single-panel overmantel.

The flooring of the first and second stories is modern oak laid over the original pine. On the third story the floors are original and are now painted with a spatter technique. On the fourth floor the old pine boards are unpainted.

STATLMENT OF SIGNIFICANCE (Include Personages, Dates, Events, Etc.)

In their restoration and refurbishing of the Joseph Haile house, it was the intent of Dr. and Mrs. Gardner to create a distinguished muscum house that could serve as a fitting setting for their own distinguished collections of early furniture and paintings. Thus, the installation of fine interior woodwork from other buildings (and even of a new entrance porch of correct style) is essentially an addition to--and a showcase for--the collections; and the whole complex as we now see it represents the thinking of many collectors and restorationists of the Gardners' day, which differed from the early approaches of the Colonial Revival in the 1890's and 1900's and which may differ from the viewpoints and techniques of the 1970's. The house was planned as a gift to Brown University and is protected from major change by the terms of an agreement signed by the university in 1932. Presently, it serves as a house for guests of the university. The collection of furniture which it contains is an excellent one, the result of generations of collecting by Mrs. Gardner and her family. It spans the periods from William and Mary through Sheraton and Empire.

Although the interior of the house as Joseph Haile built it was undoubtedly a good deal simpler than it now appears, what the Gardners' restoration lacked in absolute original authenticity, it more than made up for in the ecellence of the additions and the quality of the contents. The fact that the handsome exterior, the very fine old woodwork and the beautiful antique furnishings are preserved aesthetically together renders the Joseph Haile house a most valuable museum.
