National Register of Historic Places
Registration Form

NATIONAL
REGISTER

This form is for use in nominating or requesting determinations of eligibility for individual properties or districts. See instructions in *Guidelines for Completing National Register Forms* (National Register Bulletin 16). Complete each item by marking "x" in the appropriate box or by entering the requested information. If an item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, styles, materials, and areas of significance, enter only the categories and subcategories listed in the instructions. For additional space use continuation sheets (Form 10-900a). Type all entries.

1. Name of Property

historic name Arthurdale Historic District
other names/site number Arthurdale

2. Location

street & number east and west of State Rte 92 in Preston County not for publication

Landscape

Arthurdale was very much a planned community, and that is still evident today. The original design was done by John Nolen, a famous city planner, who had wanted groups of 20 or more houses with land set aside for gardens. However, because Franklin Delano Roosevelt apparently wanted 5-acre lots to allow people to have a cow, Nolen was replaced by Walter Trevvett, with Benjamin Lane Smith as his associate. T.D. Gray, a landscape architect from West Virginia University, helped Project Manager Bushrod Grimes plan the landscaping for the houses with, said critics, rhododendron (almost a wild flower in the state) imported from another county.

Arthurdale's road system is the most noticeable original landscape element. Not only is the original road system intact, the roads have the original "red dog" (mine slag) surface in many places. The community center is all original. Trees have grown up to obscure some of the original vistas, but the sense of openness still exists as houses are located near the road, with large open areas extending back from the roads. The community cemetery and Fairfax slave cemetery still exist, although the community cemetery has obviously become fuller over the years. The small stone building at the community center was built to provide a place to store records. Colonel John Fairfax and various family members are buried in the slave cemetery; there are field stone markers at the top and bottom of certain graves, and the community tradition has always been that these were the slaves' graves.

Features of the community's original water/sewage system still exist. The original stone well house near the post office was part of the water system for those houses that could not get adequate wells or were too low in the glade to use the well/septic system used by most houses. The original reservoir on H Road at the intersection of F and U Roads still exists. Septic fields are shown on the enclosed sections of the 1936 maps.

United States Department of the Interior
National Park Service

SEP 7 1988

National Register of Historic Places
Continuation SheetSection number 7 Page 1 (Arthurdale)

An interesting landscape feature on the 1936 maps is the small corners cut out of the lots of the original Hodgson house plats to provide play space for children. Reserve land shown on the original maps was to provide a community park on the northwest corner of the community, to provide room for future expansion, or to designate land unsuitable for building.

Houses

Louis Howe ordered the first 50 houses for the community in his goal to get people into the community quickly. These were the famous (or infamous) Hodgson houses, prefabricated houses designed as New England summer cottages which were ill-suited to the harsh Preston County winters because they were poorly insulated and lightly built. Also, their dimensions (10' x 40') did not fit the foundations already dug for the houses. In some cases, the brick fireplaces were as much as 8 feet from the outside walls of the prefab houses. In mid-November 1933, Eric Gugler, a New York architect, came to Arthurdale with Howe and Eleanor Roosevelt to take over responsibility for correcting the problems with the houses. Gugler designed ways to extend the walls of the 1-story white houses by adding rooms.

Each Hodgson house was made of prefabricated sections that were bolted together in plans known as the "I", "T", "H", and "L" plans, as shown on the attached maps. A few (particularly on E Road) seem to have a miscellaneous plan. Each house had frames of Oregon cedar and pine, with siding of cedar shingles. Residents soon learned that problems caused by the construction and poor insulation meant that paint would not adhere well to the original siding, and they have often covered the original with aluminum siding. We feel this is a historically significant alteration that reflects a design defect in the original houses. Roofs for these houses were originally standing seam metal roofs; these are still visible on some of the Hodgson houses. Walls of the 4-6- room houses were covered on the interior with a sheathing of building paper and one thickness of fiber wallboard. Some walls, i.e. in the living room, were wood-paneled. Most windows were double-hung 6/6.

Costs rose as each house got a separate well with electric pump, a separate septic system, a special grease trap costing \$37.50, indoor plumbing, and additional furnaces to supplement the inadequate woodburning fireplaces originally planned for heat. The fireplaces were lined with regular brick, not firebrick. Coal furnaces provided forced air heat. Electricity was provided to all the homes from the beginning. Indoor plumbing (and, later, refrigerators and washing machines) were particularly controversial because most of rural America, and certainly most of rural West Virginia, did not have such conveniences in 1933.

United States Department of the Interior
National Park Service

SEP 7 1992

National Register of Historic Places
Continuation SheetSection number 7 Page 2 (Arthurdale)

The first houses were completed in March 1934 and opened for inspection. The first group (50 houses) was finally finished in June 1934, and the first homesteaders moved into them then in late June and early July. Residents were charged from \$45 to \$52/month for rent, depending on the size of the house and the amount of ground. This payment only lasted for about a year because residents only made about 30 cents an hour for an 8-hour day; residents then requested lower rent payments, and the government did lower the rates. The Farm Security Administration eventually estimated that the houses cost, not \$2,000 each, but \$8,550, including the wells and sewage systems, outbuildings, cost of land, and landscaping.

Eleanor Roosevelt asked her friend Nancy Cook to plan the interior of the houses. Cook was Eleanor's partner at the Val-Kill furniture plant. The Civil Works Administration paid women to make curtains, sheets, and pillow cases for each house while the Mountaineer Craftsmen's Cooperative Association made colonial-style furniture and kitchen cabinets to complement the brick fireplaces and wood-paneled walls. Residents of the first 50 houses were given furniture free of charge, according to need, but the government tried to keep track of the furnishings and equipment issued so that residents could eventually pay the amount due. It is not clear if residents ever did pay for these furnishings and tools. Furnishings were not distributed equally because, in part, the supply was not available, needs varied, and residents had different requests. Homesteaders in the second two groups received even less furniture, the grade of lumber used was not as good, and the finishing work was not as complete.

In December 1934, construction began on the second group of 75 houses. These were known as Wagner houses because designs were started by Gugler but finished by Stewart Wagner, a consultant in the Housing Division of the Public Works Administration. This second group included houses that were more substantial and usually larger than the Hodgson houses, with 1 1/2 stories, cinder block raised foundations, frame upper stories, and wood siding. But mistakes were still made as the parquet hardwood floors were laid on a cement base, causing them to bow in humid weather. Only 6 houses had basements; those had cedar-shingled hipped roofs instead of the normal cedar-shingled gable roofs. The houses had 5 - 6 1/3 rooms each, and all had indoor plumbing and furnace units, plus barns, hog and hen houses, and root cellars. The houses were "all electric" (except for heating) because Eleanor and Howe wanted to experiment with the use of electricity in rural areas. These houses were finished in 1935 at a cost of \$8,151 per unit, including outbuildings, land acquisition, and improvements. Heating was provided by coal-fired steam or hot air furnaces; these houses had radiators.

United States Department of the Interior
National Park Service

SEP 7 1988

National Register of Historic Places
Continuation SheetSection number 7 Page 3 (Arthurdale)

In the summer of 1936, construction began on the last group of houses. These had stone veneers cut from stone from a nearby hillside. The smallest of these was a 1 1/2 story bungalow with the first floor covered with native stone and the attic wood framed. The others were designed in an English tudor style like bungalows, while a third group of 2-story houses was built in a colonial style and was entirely stone covered. All had 6 rooms (2 with 6 1/2 rooms), stone fireplaces, and the same equipment as the Wagner houses. The last one was finished in 1937.

Outbuildings were important to the subsistence homestead economy, and all but 7 of the 165 buildings had barns, hog houses, and poultry houses. Root cellars were added for 108 houses (those that did not have basements) in 1938, and therefore they are not shown on the enclosed 1936 maps. The Resettlement Administration, which took over administration of the project in May 1935, added 160 smokehouses at a cost of nearly \$38,000. Most of the root cellars still exist, as do many of the smokehouses that appear to be entrances to the root cellars. Barns have usually been enlarged, often to convert them to garages. Some corncribs still exist; corncribs could also be built inside the barns.

New housing has been built in Arthurdale since 1947 on reserve land and on parcels cut from the original homestead lots. Much of this new housing is for descendants of the original homesteaders. It varies from expensive to low-cost, from two-story to mobile homes, but it does not detract from the overall plan of Arthurdale because new roads have not been created to provide access to these houses. New outbuildings, i.e. garages or additions to provide garage space, have been added to existing homes, since individual garages were one amenity the federal government did not provide for people.

See continuation page 9 of section 7 for description of survey methodology and continuation pages 10-33 for section 7 for descriptions of individual houses.

Community Center

The community center buildings were located on 3 sides of an open quadrangle. To provide a community center for the homesteaders, the government bought a historic Presbyterian church from the Reedsville-Masontown area, disassembled it, and put it back together in Arthurdale. The large wood-frame gable-roofed structure sits on a concrete block foundation; a portico with gable roof was added when the church was reconstructed in 1933-34. The northernmost of the 4 wood pillars supporting the portico had been taken down at some point and was replaced in 1987. The old church was used for church services organized by residents, an assembly hall, and place for dances and plays; the federal government, because of

United States Department of the Interior
National Park Service

SEP 7 1987

National Register of Historic Places Continuation Sheet

Section number 7 Page 4 (Arthurdale)

separation of church and state, could not provide a church building. Residents built a woodworking shop under the building. On the north side of the church, there are two small wood frame rooms; on the south side, there used to be a white wood plank wall hiding the roof of the work space below. When that wall is reconstructed, the west side of the quadrangle will be identical to the 1930s photograph when viewed from the quadrangle. Stone steps lead down to the basement area on the south side of the complex, and these were uncovered in 1987 after being hidden in piles of debris. The community center complex was almost finished by September 1934 when it was used for nursery and high school classes. In January 1936, a general store opened in the center. Over the years, other activities in the center complex included a tearoom, barber shop, weaving room, post office, administrative offices, and a salesroom for the furniture of the Mountaineer Craftsmen's Co-operative Association.

The ground level buildings on the south side of the complex were destroyed by a fire about ten years ago; they were wood frame buildings that can be seen in the attached historic photographs. Field stone foundations of the buildings on the ground level on the south side are now visible, after having been covered with debris for a decade. Those will be interpreted as foundations. The garage complex under these buildings still exists, except that the tarpaper roof is badly deteriorated. On the southwest corner of the complex, at the basement level, is the central power plant that serviced the whole community center complex, including the stone buildings. The original boiler is still intact, complete with instructions for operation.

On the north side of the quadrangle, two stone buildings served as the administration building and forge. The administration building is 1 1/2 stories tall and has a cedar shingle roof which was replaced in 1987 as part of the restoration of the center. The interior framing is of chestnut. The center section is open to the ceiling, while there are small offices/rooms on the east and west ends on the first floor and balconies above those. There is a stone fireplace on the east end of the center room. Original multi-light window and door sashes were restored in 1987, salvaging as much of the original fabric as possible. The forge is a large open single-room building with an oriel window on the south end as a display area for forge products; a fireplace on the north end serviced the forge. The original cedar shingle roof has deteriorated and will be replaced in 1988 with new cedar shingles. The forge made the lighting fixtures and hardware for the houses and other community buildings, as well as products for sale. The last building on the north side is a service station built in the 1930s, containing a small room as an office and two restrooms. This area also contained the 1930s grease pit and the stone service bays for the community garage. According to residents, this is where community farming equipment was kept, and it was always a "working" area.

United States Department of the Interior
National Park ServiceNational Register of Historic Places
Continuation SheetSection number 7 Page 5 (Arthurdale)

Schools

In the spring of 1935, construction began on a complex of 6 school buildings, including (from west to east), a recreational building/gymnasium (which included a basketball court and stage for community productions), a high school/junior high school building, school center building (cafeteria, home economics rooms, canning rooms to prepare food for school lunch program, and offices), elementary (grades 4-6), and primary school buildings (grades 1-3), and a nursery school. Four of the white frame buildings still stand and are used as school buildings. Fire doors have been added to the buildings, and a macadamized surface over the original stone walls and ramps have been added to make the buildings accessible for disabled students.

The white frame gymnasium/recreation building has horizontal wood siding and multi-lite (usually 6/6) double-hung windows. A few windows have been boarded over, but the frames still remain. The various roof lines denote the variety of spaces to be spanned in such a building, and siding on the extended walls over the gymnasium section is board and batten. The entrance is marked by a triangular pediment supported by 6 wood pillars. There is a small gable hood or shed roof hood over each door other than the main entrance.

The high school/junior high school building is a wood frame building with horizontal wood siding and gable roofs. The east and west ends are one-story in height, while the center is two stories. Multi-light wood frame double-hung windows are generally 12/12 on this building. There is a gabled portico supported by two wood pillars at the entrance. This building had a greenhouse attached to it so that students could raise plants for sale; the greenhouse is still there. The high school/junior high school building is now used as Valley Junior High.

The school center building is two stories in the front and 1 1/2 stories in the rear. It is a wood frame building with horizontal wood siding and wood framed multi-lite double-hung windows (primarily 12/12). Gable roofs cover the various sections of the building. There is a small gable-roofed portico over the main entrance. Ramps provide access to the double doors in the middle of the west side of the building. There is a large brick chimney in the back of the building. There are no longer offices in the school center building; it is now used as a cafeteria and classrooms.

The elementary school building is a one-story wood frame building with horizontal wood siding and various gable roofs. There is a large brick chimney in the center. Multi-lite double-hung wood frame windows are 12/12.

United States Department of the Interior
National Park Service

SEP 7 1988

National Register of Historic Places
Continuation Sheet

Section number 7 Page 6 (Arthurdale)

or 6/6 in most cases. The entrance is marked by a portico with gable roof and wood pillars. The elementary and primary school buildings had running water in each classroom to provide water for crafts. The nursery building had a bathroom in each classroom. There were also 3 sleeping porches enclosed with glass on the nursery building so children could rest. There were 4 separate playgrounds for the nursery building, one for each age group (2-5 years old).

After Preston County took over the schools about 1938 and all federal (WPA) and private money was withdrawn, the county only wanted to operate four buildings. The primary and nursery school buildings were converted into factories during the war, were then used as chicken houses by Ruby Enterprises, and were eventually demolished.

The Preston County Board of Education has since built two new buildings west of the original school complex, but the linear "campus" setting of the original complex remains. Both the new buildings are used for Valley Elementary School classes.

The white building back of the school complex was the pottery. It was built about 1936. It is now a storage room for the school.

Inn

The Arthurdale Inn was built to provide accommodations for all the visitors who came to Arthurdale. While many wanted to save the Arthur mansion, Rexford Tugwell of the Resettlement Administration ordered the mansion to be demolished and an Inn built. Plans were available by early 1936 but the Inn did not open until late May 1938. The two-story stone building has a gable roof and horizontal wood siding on the gables and shed dormers. Windows are wood frame, double-hung, and multi-lite (usually 12/12 or 9/9). Shed dormers, gable-roofed dormers, and oriel windows add variety to the fenestration. There is a shed-roofed porch at the main entrance on the east side of the building. The exterior is original on the exterior except for a porch that was remodelled and enclosed on the southwest corner.

The Inn included 20 guest rooms, a dining room, and terrace; furnishings were from the Mountaineer Craftsmen's Cooperative Association. The first floor entry area, lounge, bathrooms, and sleeping rooms still remain in their original condition, complete with a print of George Washington autographed by Franklin D. Roosevelt for the people of Arthurdale in its original location over the fireplace in the lounge. The building is now in private ownership, and walls have been removed on the second floor to provide larger bedrooms for the family.

United States Department of the Interior
National Park Service

SEP 7 1977

National Register of Historic Places Continuation Sheet

Section number 7 Page 7 (Arthurdale)

The large white frame (2-story) garage on the south end of the inn complex was built about 1985 by the current owners, in part to house equipment for their construction business.

Factories

Several factory buildings were constructed in Arthurdale in the late 1930s. On the north edge of the homestead community, these are now within the corporate limits of Reedsville but are nominated here because of their significance to Arthurdale. The two-story white concrete block building on the south side of the road leading into the factory complex was not built by the federal government and is excluded here. On the north side of the road, from west to east, are a one-story building with flat roof, a one-story building with gambrel roof, a 1 1/2 story building with gable roof, and a 1-story building with monitor roof. The two buildings to the east (gable and monitor roofs) have multi-light awning windows.

The Preston County Sheltered Workshop (employing the handicapped to make simple craft items) and Fibair (making insulation) are in the factory complex now. The smaller brick building is not being used at all now.

Farm Buildings

The only building included in the property nominated here that was associated with the commercial and cooperative farming life in Arthurdale is the former chicken house. This two-story yellow-sided building on the west side of Route 92 on the north edge of Arthurdale was built by the federal government as a chicken house. The old farmhouse nearby predates Arthurdale's development and was retained by the federal government as part of the chicken farm; they may even have housed chickens in the building. At various times, these buildings were converted to housing for people, then back to housing for chickens or turkeys, and have since been converted back to housing for people. The building retains little of its original integrity.

Other buildings extant from the farm at Arthurdale are now owned by West Virginia University and will be nominated to the National Register as part of a multiple property listing prepared for all West Virginia University farm properties. That nomination is now being prepared. It is easier, from a bureaucratic point of view at West Virginia University, to nominate the farm properties now owned by the university at one time so that the university can properly evaluate its holdings and determine its priorities.

United States Department of the Interior
National Park Service

National Register of Historic Places Continuation Sheet

Section number 7 Page 8 (Arthurdale)

Demolished Buildings

In addition to the two missing school buildings, the only parts of the original community that have been demolished are the 22-room Queen Anne Revival (1903) Arthur Mansion (demolished by the federal government to build the Inn), the Fairfax cabins (also demolished many years ago in 1930s?), and the south section of the community center complex, which burned in the 1970s. A ca. 1950s deteriorated nondescript 1-story concrete brick building at the community center complex was removed in 1986 as part of the restoration effort.

New Construction

In addition to new housing, major new buildings are the school buildings and the church. The church was built in the 1950s as a community endeavor. This gable-roofed stone building sits on a raised foundation, providing space for a basement meeting room and kitchen beneath the sanctuary. There is a balcony on the north end of the building, with the altar area on the south end. It was clearly designed to fit the environment of the stone administration building/forge area and the stone Inn. Built as a community enterprise, but now part of the United Presbyterian Church, the church also embodies the cooperative spirit fostered at Arthurdale. Plans were underway for the church from the 1940s, as the community united to raise the needed funds. Eleanor Roosevelt made her last visit back to Arthurdale to dedicate the church in 1960.

The factories are described above.

Survey Methodology

Because of Arthurdale's importance in community planning, we decided to nominate the entire site, including the pieces at the corners that were reserve land and now have a few new houses on them. These sections are so small (and the houses on them take up so little room) that it seemed better to protect the entire homestead community. The only land excluded is a small section of the experimental farm on the north end of the homestead, since this area is now part of the West Virginia University farm complex. A 1936 tax assessor's map, showing all buildings and outbuildings (except root cellars which had not yet been built), fences, and septic fields was available at the tax assessor's office but could not easily be reproduced because of its multiple large (40" wide sheets). Xeroxes of several sections of that map are included here to show the detail available.

The attached two maps are keyed to the description of houses below. The base map for the district nomination is a large map that hung in the

United States Department of the Interior
National Park Service

SEP 7 1982

National Register of Historic Places Continuation Sheet

Section number 7 Page 9 (Arthurdale)

administration building during the federal government's control of the project; unfortunately, we do not know the exact date of the map. It shows residents at the time it was made and the original division of lots. We have added the house types for the original 165 houses on the first map and then added to those 165 houses the houses built since 1947 and the lot lines and tax assessor's plot numbers to create the second map. All new houses (which would be intrusions in the district) were then added to the map, indicating if they were trailers, ranch style houses, etc.

A windshield survey by Iris Allsopp, using guidelines established by Barbara Howe and Elizabeth Nolin in cooperation with the Allsopp and Glenna Williams, noted whether the original houses were 100% complete, 75% complete (minor additions, enclosed porches), 50% complete (additions equal to or greater than the size of the original house), 25% complete (something visible of original house), or 0% complete (original house too altered to be identifiable). Photos of houses judged to be in these categories were taken to illustrate the standards used. Aerial photos from the 1930s and 1980s illustrate the fact that the original community plan is still in existence, although the growth of trees over the years obscures some original views.

A "road by road" description of the houses follows and is keyed to the attached maps. The maps which identify properties by tax assessor's parcel numbers since there are no street addresses used in Arthurdale for other than the original houses. Even there, houses are identified as A-1, A-2, etc.

Houses are coded as follows: Hodgson-I ("I" style or shotgun style); Hodgson-T ("T"-shaped plan); Hodgson L ("L"-shaped plan), Hodgson-H ("H" shaped plan); Hodgson-? (too altered to tell); Hodgson-M (miscellaneous plan); Wagner-1 (1-chimney style, with cinder block 1st floor and frame 2nd floor), Wagner-2 (2-chimney style (1 fireplace and 1 cookstove; cinder block 1st floor and frame 2nd floor); Wagner-1 1/2 (1 1/2-story style (cinder block 1st floor and frame 2nd floor); Wagner-? (too altered to tell); Wagner-H (Wagner period, 2-story square, hipped roof); stone-2s (2-story, all stone facade); stone-1 1/2 (1 1/2-story, stone 1st floor and wood 2nd); stone-2 (2-story, stone 1st floor and wood 2nd); stone-? (too altered to tell); teacher's house.

NOTE: Numbers refer to 1930s houses, which were numbered A-1, A-2, etc. Newer houses are listed in order along the road but have no official numbers. See assessor's maps for parcel identification.

A-ROAD

1. Della Shaw - Wagner-2. Parcel #61. Front porch enclosed. 75% original. Mailing address: Box 177, Arthurdale 26520.
2. Allen Shaffer - Hodgson-L. Parcel #84.1. This house has been greatly altered. 0% original. Mailing address: Box 401, Arthurdale. This was the model house.
3. Fred DeVault - Hodgson-H. Parcel #18. Front porch enclosed and no barn. 75% original. Mailing address: Box 42, Arthurdale.
Larry Williams - single-width trailer. Parcel #18.1. Mailing address: P.O. Box 42, Arthurdale.
4. Martin Schatz - Hodgson-H. Parcel #17. Front and back porch are built in and house has original tin roof and barn. 75% original. Mailing address: Box 236, Arthurdale.
William Richman - 1-story frame house. Parcel #17.1. Mailing address: Box 84, Arthurdale.

B-ROAD

1. Ellen Estep - Wagner-1. Parcel #62. Enclosed front porch and aluminum siding. 75% original. Mailing address: Box 158, Arthurdale.
2. William Bauer, Jr. - Wagner-1. Parcel #41. 100% original. Mailing address: Box 83, Arthurdale.
3. Lawrence Moran - Hodgson - I. Parcel #45. Large front porch enclosed and original tin roof. Property also includes new 1-story brick ranch built in 1969. There are 2 barns (16' x 26' and 28' x 42') behind original house. 50% original. See attached assessor's print-out. Mailing address: Box 157, Arthurdale.
4. Carolyn Bauer - Hodgson-L. Parcel #23.1. 2-story addition built to house on right side. 0% original. Mailing address: Box 356, Arthurdale.
Richard Hardy - mobile home (24' x 65') - Parcel #23. Mailing address: Box 38, Arthurdale.

5. Irene Durr - frame tri-level built in 1972. Parcel #22. See attached assessor's print-out. Mailing address: Box 96, Arthurdale.
6. Henry Taylor - Hodgson-I. Parcel #42. Front porch built-in and roof appears raised (no tin). No barn. 0% original. Mailing address: Box ?, Reedsville 26547.
7. Ronald Born - Hodgson-I. Parcel #43. Front porch built-in; tin roof original part of house; smoke house in poor repair. 0% original. Mailing address, Box 337, Arthurdale.
8. Ronald Teets - Hodgson-I. Parcel #44. Porches built in; tin roof; house in very poor condition; no barn. 25% original.
9. Jerry Wolfe - Hodgson-T. Parcel #24. House has been enlarged; porches built-in; no tin roof; barn in poor condition; was an L-shape but now box-shape. Mailing address: Box 64, Arthurdale.

There is also a mobile home on this property.

John McCrobie - house on lot (183' x 100') is 1-story frame built in 1950. Parcel #9. See attached assessor's print-out. Mailing address: Box 84, Arthurdale.

Gordon Shilling - frame tri-level built in 1980. Parcel #24.2. See attached assessor's print-out. Mailing address: Box 3361, Morgantown 26505.

Bessie Guseman - 1-story modular home built in 1979. Parcel #24.3. See attached assessor's print-out. Mailing address: Box 433, Arthurdale.

National Register of Historic Places
Continuation Sheet

Arthurdale Historic District

Section number 7 Page 35

Section 7, page 9 indicates that the pre-1947 houses were categorized as 100% complete, 75% complete (minor additions, enclosed porches), 50% complete (additions equal to or greater than the size of the original house), 25% complete (something visible of original house), or 0% complete (original house too altered to be identifiable). We feel that houses that are 50%, 75%, and 100% complete are definitely contributing to the National Register historic district and should be so counted. Houses that are 25% or 0% original may be added to the noncontributing list if the Register staff so wishes. Please note that it is impossible to date alterations on these houses, but it is very likely that all alterations to original houses took place after 1947 when they were in the hands of private owners.

Our standards for these decisions can be seen in the following photographs that were sent with the National Register nomination. These illustrate the houses shown in the materials sent as part of section 7 of the nomination.

F-6: 100% original Hodgson-T. The roof over the stone porch is a small addition that does not detract from the original design of the house. Also, the stone porch is original to the house; most Hodgson houses had a stone patio or porch in front. The aluminum siding is an alteration to accommodate the fact that these summer cottages were poorly insulated and never held paint well. Therefore, it is part of the evolution of the Hodgson house at Arthurdale.

O-3: 100% original Hodgson-T. No changes except for railing on front porch and use of aluminum siding, again because of problem of paint peeling on original siding.

Q-10: 100% original Wagner-2 house. Several photos of this house are included in the package to show outbuildings and the interior.

BB-3: 100% original Stone-1 1/2 house.

M-14: 100% original Stone-1 1/2 house.

S-4: 100% original Stone-1 1/2 house.

F-4: 75% original Hodgson-I. Instead of original porch running length of house to left of house, porch has been enclosed with a small room at the back (left of photo) and enclosed entry in center of photo. 6/6 windows beneath porch are proof that house is on its original foundation.

O-6: 75% original Hodgson-T because of addition to rear of house. From road, house appears to be 100% original except for new railing on porch.

U-15: 75% original Stone-1 1/2 house. Original house is on right and is intact except for section where room has been added to left. Garage has been added onto

National Register of Historic Places
Continuation Sheet

Arthurdale Historic District

Section number 7 Page 3b

that room. Since garage is in stone, it matches original house well and in no way overpowers original house.

E-5: 50% original Wagner-1. The original part of this house is to the left. Aluminum siding has been added. The garage and second-floor apartment were added in the mid-1980s.

U-12 50% original Wagner-1 1/2. The original house is visible on the left with the center chimney, but the front porch has been enlarged and enclosed, and an addition with garage has been constructed on the right side of the house. This addition apparently encloses the side/back entrance to the house.

U-14: 25% original Wagner-1. While the original shape of the house is intact, complete with the distinctive shed roof over the door, there has been an addition on the left side, the front and side/back porches have been enclosed, and the house has been resided.

Q-2: 0% original Wagner-1 1/2. The original shape of the Wagner house is visible in the 1 1/2 story section with the center chimney, but a front room and porch, garage, and connecting room have been added. Also, the house has been resided with brick.

State significance of property, and justify criteria, criteria considerations, and areas and periods of significance noted above.

Introduction

Arthurdale is nationally significant as the first of the c. 100 federal New Deal "new towns" created in the 1930s to provide a better life for distressed individuals during the Great Depression. It is significant in social history because it represents the humanitarian concerns of the New Deal in its attempt to provide employment and better housing. It also represents a federal experiment in community planning and development since the site was planned as a self-sufficient community. The experimental educational program developed there by Elsie Clapp, a disciple of John Dewey, gives the site national significance in education. Provisions for medical care funded by the federal government illustrate a 1930s version of socialized medicine.

Much maligned by critics of the New Deal for its houses that did not fit the foundations, the factories that operated at capacity only during World War II, and the expense of the project, Arthurdale did provide a new start in life for the unemployed coal miners of Scotts Run and for others in the region. Eleanor Roosevelt championed the project, and the site illustrates her humanitarian concern for the poor.

As a National Register historic district, Arthurdale is significant because all 165 original houses still exist, as do the Inn, the factories, four of the six school buildings, the pottery, the well house, the cemeteries, most of the community center buildings, and the original road system, including the original parking lot! While new houses have been built, they have been built along existing roads so that the original plan of the community, including the original sense of openness, still exists.

See continuation sheet

United States Department of the Interior
National Park Service

SEP 7 1980

National Register of Historic Places Continuation Sheet

Section number 8 Page 1 (Arthurdale)

The period of significance is from 1933 to 1947, to indicate the length of time the federal government was involved in the project. While 1947 is obviously less than 50 years ago, this site has such overriding national significance as the first of these federal New Deal "new towns" that it deserves to be listed on the National Register now. Only minor construction was done by the federal government after 1938, so almost all of the federal-period buildings are now 50 years old.

The area designated for listing is all of the original community, with the exception of a small portion of the experimental farm lands near the factories. Again, it is historically important to protect this original plan insofar as possible, even though a few new houses have been built on reserve land at the corners of the district.

National Register listing, then, should be the first step toward National Historic Landmarks designation for this site under the NHL social and humanitarian theme.

History and Significance

Arthurdale is a small community in Preston County, West Virginia, about 15 miles up the mountain from Morgantown. When the depression hit in 1929, unemployed miners in areas such as Scotts Run, just outside Morgantown, had no options and no work. By April 1933, 63% of the population in the coal camps was unemployed -- part of the 41% (c. 20,000) unemployed in the Morgantown's Monongalia County.

The earliest efforts to provide relief in the coal camps, as elsewhere in the country, came through private endeavors; the local Council of Social Agencies, for example, coordinated the activities of groups like the Salvation Army and the American Friends Service Committee. The West Virginia University (WVU) Agricultural Extension Division, was also involved in relief activities and pushed the concept of subsistence home gardens. Two key figures in Arthurdale's development got their start in these activities -- Bushrod Grimes and Clarence Pickett. Grimes was a WVU extension staff member who organized the best subsistence garden program in the state in Monongalia County with the support of the Council of Social Agencies and the American Friends Service Committee. Pickett, executive secretary of the Friends Service Committee, saw these gardens as an important part of the relief and rehabilitation effort needed in the coal fields.

By working in Scotts Run, Grimes, Pickett and others undertook a huge challenge. In a 1935 Atlantic Monthly, William Brooks described Scotts Run

United States Department of the Interior
National Park Service

SEP 7 1999

National Register of Historic Places Continuation Sheet

Section number 8 Page 2 (Arthurdale)

as "the damndest cesspool of human misery I have ever seen in America." Eleanor Roosevelt would call it "the worst place I'd ever seen." While former residents of Scotts Run remember conditions as not that bad, the fact that outsiders like Eleanor Roosevelt felt they were that bad is important -- without her perception of the problem, she would not have pushed for a solution.

The seeds of the solution were also in Scotts Run. At the Crown mine, Bud Godlove, a mountaineer chairmaker, was recruited to train men to make the Godlove chair that would be made famous in Arthurdale. That shop merged with other cooperative activities to form the Mountaineer Craftsmen's Cooperative Association which did metal work, needlework, and weaving in addition to woodworking. The Mountaineer Craftsmen's Association later opened a shop in Arthurdale.

Stephen Haid, author of "Arthurdale: An Experiment in Community Planning, 1933-1947," also notes the development of the back-to-the land movement in the 1920s as an important predecessor to the Arthurdale story. Three bills were introduced in Congress in 1932 to encourage subsistence homesteads, but none passed. After his election in 1932, Franklin Roosevelt began to push the subsistence homestead idea, and Milburn L. (M.L.) Wilson became the first director of the program. FDR and Wilson committed the federal government to a subsistence homestead program.

Wilson had in mind a three-pronged attack on the issue of subsistence homesteads. First, he felt that the best solution was to combine subsistence farming with part-time industrial employment; one had to take industries to the subsistence homestead location and one had to get people stranded in rural areas to give up submarginal land to move to these new communities. Wilson also promoted the idea of handicrafts as an "outlet for individual expression as well as a means of income supplement." Both industry and handicrafts would be part of the Arthurdale economy.

In May 1933, as part of the First Hundred Days legislation, Congress passed the National Industrial Recovery Act. Section 208 of Title II provided the funds for the subsistence homestead program to be administered by the Division of Subsistence Homesteads of the Department of the Interior. The division contemplated five types of projects, including ones to rehabilitate stranded industrial populations, especially populations of bituminous coal miners. Arthurdale was the first and most prominent example of this group of homesteads.

Three months later, in August 1933, Eleanor Roosevelt paid her first visit to Scotts Run at the invitation of the American Friends Service Committee and at the request of FDR. Eleanor and Louis Howe, FDR's personal

Section number 8 Page 3 (Arthurdale)

secretary, decided that the people of Scotts Run had to be moved to a new environment to alleviate their problems and to dampen the possibility of a communist revolution. Bushrod Grimes used Eleanor's visit as an opportunity to explain that WVU extension staff had registered at least 400 miners for the c. 49 tracts of land already identified.

The ag extension agents were especially interested in the Richard M. Arthur farm, about 15 miles from Morgantown in Preston County. WVU had already been using part of the farm for agricultural experiments. Within a week of Eleanor's visit, Louis Howe told Wilson that he, FDR, and Eleanor had agreed that the federal government should purchase the Arthur Farm immediately and secretly. Grimes acted as the agent for the U.S. Department of the Interior and purchased the 1,018 acres of land and 22-room 1903 mansion for \$35,000 from Arthur, an elderly Pittsburgh hotelkeeper who was about to lose his land to the state for back taxes anyway. In addition to the mansion, the property included a log cabin built by the slave foreman of Col. John Fairfax, who purchased the land in 1789. Large areas of the farm were also in a glade or marsh so that the whole area would have to be drained with tiles to be productive for farming. The tiles are still essential to the community's drainage system. Grimes also purchased a few surrounding tracts, all under 100 acres each.

On October 12, 1933, Harold Ickes, Secretary of the Interior, publicly announced that the farm had been purchased as a homestead demonstration project for unemployed miners. Each family was to get a home plus 2-4 acres for farming. Homes would cost about \$2,000 each, and the community would be self-governing like a New England town meeting. A factory to produce equipment for the Post Office would provide supplementary income.

The next step was to choose those who would be homesteaders. Grimes and others were a committee to make the selection. By mid-October there were over 600 applicants for the homesteads. While the selection committee wanted to help those who were truly needy, a more important factor came into play -- there seemed to be a consensus that the most important criteria was to choose people who would make the community work. No one with a shady moral character would be accepted. Grimes also felt it was so risky an experiment that they had to find people with "a much higher quality of intelligence, perseverance and foresight" than would later communities. In addition to have the "proper" attitudes and a certain level of education, homestead applicants also had to know something about farming, had to have proven their success in the subsistence gardens set up by Grimes, and had to be physically fit. Homesteaders had to be native-born and white, although both immigrants and blacks lived in Scotts Run. Racial segregation was enforced, ostensibly, because black homesteaders in the West Virginia of the 1930s would have required a segregated school system. Of the first group of

Section number 8 Page 4 (Arthurdale)

50 families, most came from a northern European background; about 1/2 were miners, about 1/4 sawmill hands, and about 1/4 farmers. Most were natives of West Virginia, but not all lived in Scotts Run. Eleanor Roosevelt sent a delegate to help in the selection process since all the homesteaders had to be approved by the federal government. Other residents were recruited because of particular skills needed to make the community work, i.e. blacksmithing and carpentry.

By early November 1933, the Arthur farm had been surveyed and the work of building the community began under the direction of Bushrod Grimes, the first project director. The men ate and slept in the "Red Onion" in Reedsville (still standing but never part of the Arthurdale tract and now — heavily altered so not included here). The men later moved to the Arthur mansion, living there in barracks-style while building the new community. With some help from men in a nearby Civilian Conservation Corps camp, the homesteaders begin to tear down old buildings and fences and clear brush in November. On November 8, they began to excavate the foundations for the first house and elected officers for the Homesteaders Club, the first organization in the new community.

The first residents finally moved into their new homes in June 1934. They were expected to participate fully in the life of the community and to be self-sufficient on a daily basis. They farmed their plots of land and canned the surplus; having access to these gardens and room to store the surplus meant a better diet and better health for the residents. Residents shopped, played and met, and some worked in the community center. The homesteaders organized in the Homesteaders' Club (for men) and the Eleanor Roosevelt Farm Women's Club (now an Extension Homemakers' Club) to learn skills needed in their new environment and to build esprit d'corps.

The WVU Ag Experiment Station helped homesteaders decide what to plant. Each homesteader was to clear one acre for vegetables, one for wheat, and one for forage crops to feed their cows, pigs, and chickens. In addition to the individual farms, about 440 acres were plowed and planted in vegetables and potatoes as part of the agricultural co-op program. These individual farms were much more successful than the dairy and poultry co-ops that were tried over the years. The dairy farm buildings still stand as part of West Virginia University's Reedsville Farm, while the poultry co-op building still stands at the north edge of the community but has been extensively remodeled to serve as apartments.

Educational System

Elsie Clapp was hired to organize an educational system for Arthurdale. As a disciple of John Dewey, she established a progressive educational program

United States Department of the Interior
National Park Service

SEP 7 1988

National Register of Historic Places Continuation Sheet

Section number 8 Page 5 (Arthurdale)

that included six school buildings to support 165 families. Dewey himself served on the National Advisory Committee (a.k.a. Arthurdale Sponsoring Committee) for the schools. Project architect Eric Gugler designed the complex so that children could attend a nursery, elementary, intermediary, and high school in Arthurdale; the recreational building and school center building served all children. Clapp brought some teachers with her and also trained local teachers from the Preston County system. Teachers lived in the community in designated "teacher's houses" and participated fully in the social life of the community.

The unaccredited Arthurdale schools were not part of the county system because of their "unorthodox" programs. Students followed the physical development of their community by learning math through surveying the community as the men planned new roads and buildings. Arthurdale was to keep alive the Appalachian heritage, and students did that by learning pioneer crafts that they practiced in the Fairfax slave cabin (now demolished). The recreational building was the community center for square dances. Eleanor Roosevelt attended every graduation of Arthurdale High School during FDR's administration, and FDR attended his only high school graduation as president when he visited Arthurdale in 1938.

When Clapp left in July 1936, amid frustration from private supporters like Bernard Baruch that the community was not more self-supporting, the school system went under the control of the Preston County Board of Education. The curriculum became more "standard," with lingering progressive activities more the result of personal preference on the part of the teachers who had worked under Clapp.

Medical System

✓ Medical care in Arthurdale was provided by doctors and nurses hired by the federal government to practice in the clinic built by the government. Clapp established the medical program during the 1934-35 school year, with a school nurse and doctor. Well-baby clinics and dental care were among the tangible benefits offered residents, who generally enjoyed much better access to medical care than they had before moving to Arthurdale. They probably also enjoyed much better care than other rural residents of the county. The doctor's house and clinic still stand on E Road.

Employment

Cooperative efforts and community-owned businesses were encouraged at Arthurdale. Homesteaders first discussed organizing co-ops in the summer of 1934 and formed a branch of the Mountaineer Craftsmen's Co-operative Association in January 1935. The general store, for instance, was run by

United States Department of the Interior
National Park Service

SEP 7 1988

National Register of Historic Places Continuation Sheet

Section number 8 Page 6 (Arthurdale)

the Arthurdale Association, a non-share West Virginia corporation that received loans from the federal government and was chartered with the help of the Resettlement Administration.

Employment for homesteaders after the construction work was finished became a major problem. Due to political pressure, the hoped-for post office equipment factory never materialized. Finding and financing industries to move to Arthurdale became a constant struggle. In December 1933, the Federal Subsistence Homesteads Corporation was chartered to organize local corporations for the homesteads, making it legally possible for the feds to have contracts with the homesteaders to eventually give them ownership of their property. The corporation then gave funding to the Arthurdale Association to erect a factory building for the Electric Vacuum Cleaner Co. of Cleveland, which agreed to operate a factory in Arthurdale. In the aerial photo of the factory area, this is the building ^{that} has a gambrel roof. The factory building was almost complete by July 1935 and a lease was signed with the vacuum cleaner company in April 1936. The factory closed in the summer of 1937 after only 13 months of operation, a victim of the recession of that year. The Phillips Jones Shirt Co. moved into unused space in the factory in 1937 and employed 34 women making Van Heusen shirts by June (all the industries seem to have been sex-segregated). The plant closed in October of that year, opened again in March 1938, and closed for good in August 1938.

In August 1938, the Arthurdale Association reached an agreement with American Cooperatives, Inc., a wholesale coop operation that made fertilizer and other farm products, to move its tractor assembly plant to Arthurdale. That operation closed in April 1940 after a year of operation.

Then FDR directed the War Department to get some type of plant operation into Arthurdale because there were two empty factory buildings available. In April 1940, Silman Manufacturing Co. moved into part of the tractor factory to make walkie talkies, public address equipment, and flares. It hired mostly women. The next year, 1941, the Brunswick Radio and Television Co. moved into the craft shop of Mountaineer Craftsmen and part of the tractor factory to produce cabinetry, radio chassis, record players, and speakers. It closed at the end of 1942 as a result of market glut. Finally, in 1942, Hoover Aircraft Corporation opened a plant in Arthurdale, occupying all 3 factories and the inn until the end of the war while they manufactured wooden planes to train pilots.

Conclusion

By 1939, efforts were underway to reduce the federal presence in Arthurdale. When Milford Mott arrived in 1941, his duties as the last community manager

United States Department of the Interior
National Park Service

SEP 7 1998

National Register of Historic Places Continuation Sheet

Section number 8 Page 7 (Arthurdale)

focused on liquidating the government's interests in Arthurdale. By 1947, all the houses and other buildings had been sold to homesteaders and other individuals or corporations. Four school buildings were deeded to the Preston County Board of Education -- the other two had been converted to factories during World War II and are now gone. Farm land was sold to WVU for \$1 to add to the university's existing experimental farm. The cemetery was deeded to the residents of Arthurdale.

Arthurdale is still an unincorporated community. New housing has been built, as shown on the attached maps. The community celebrated its 50th anniversary in July 1984 and, in October 1985, organized Arthurdale Heritage, Inc., which now owns and is restoring the community center complex.

Arthurdale Historic District

Summary of Significance

At the height of the Great Depression in 1933, a significant event occurred in the social history of the United States. The U.S. Department of the Interior's Subsistence Homesteads Division created Arthurdale. Arthurdale was an agricultural settlement to which 165 unemployed families from Monongalia and Preston counties in West Virginia came between 1933 and 1937 to escape hard times and form new hopes and dreams in a spirit of pioneer neighborliness and cooperation. The homestead community at Arthurdale was the first of its kind in the U.S. and was a favorite project of First Lady Eleanor Roosevelt. The federal government operated Arthurdale until 1947 when it ended its involvement in the project because of setbacks in its finances, administration and political backing.*

Verbal Boundary Description

The property being nominated is the original federal community of Arthurdale, minus the small section of the experimental farmland on the northwest corner. That farmland is only a small part of West Virginia University's farms around Arthurdale.

See continuation sheet

Boundary Justification

Arthurdale was planned as a total community, so it is historically accurate to nominate as much land as possible. Also, the few new houses that have been built on the corners on reserve land do not justify gerrymandered boundaries, as they represent the growth that was anticipated for Arthurdale and still preserve much of the "undeveloped" character of those sections.

The property nominated totals 1102 acres. All properties constructed prior to 1947 are considered to be contributing to the district, with the exception of the chicken house/converted to apartments, which has been so heavily modified. Any properties built since 1947 are considered to be intrusions to the district, including the two new schools, the 1960 community church, new houses and outbuildings, etc.

Arthurdale is listed on two USGS maps, which have been taped together here to show the total boundaries. The UTM coordinates listed below are keyed to the letters on the USGS map. This district map as drawn on the USGS map was drawn by a licensed professional surveyor from the base map used for this nomination. He was also responsible for calculating the acreage.

ABSTRACT/SUMMARY COMMENTS:

On resubmission the categories of contributing and non contributing resources have been reassessed - item 7 pp. 35-36 is the new evaluation. Despite the implication (on p. 35) that listing the resources with 0% and 25% original materials as noncontributing is somehow left to the whim of the N.R. staff, these buildings clearly do not contribute due to a loss of integrity. This district retains integrity even with the new resource count.

Landscape

Arthurdale was very much a planned community, and that is still evident today. The original design was done by John Nolen, a famous city planner, who had wanted groups of 20 or more houses with land set aside for gardens. However, because Franklin Delano Roosevelt apparently wanted 5-acre lots to allow people to have a cow, Nolen was replaced by Walter Trevvett, with Benjamin Lane Smith as his associate. T.D. Gray, a landscape architect from West Virginia University, helped Project Manager Bushrod _____ times plan the landscaping for the houses with, said critics, rhododendron (almost a wild flower in the state) imported from another county.

Arthurdale's road system is the most noticeable original landscape element. Not only is the original road system intact, the roads have the original "red dog" (mine slag) surface in many places. The community center is all original. Trees have grown up to obscure some of the original vistas, but the sense of openness still exists as houses are located near the road, with large open areas extending back from the roads. The community cemetery and Fairfax slave cemetery still exist, although the community cemetery has obviously become fuller over the years. The small stone building at the community center was built to provide a place to store records. Colonel John Fairfax and various family members are buried in the slave cemetery; there are field stone markers at the top and bottom of certain graves, and the community tradition has always been that these were the slaves' graves.

Features of the community's original water/sewage system still exist. The original stone well house near the post office was part of the water system for those houses that could not get adequate wells or were too low in the glade to use the well/septic system used by most houses. The original reservoir on H Road at the intersection of F and U Roads still exists. Septic fields are shown on the enclosed sections of the 1936 maps.

National Register of Historic Places Continuation Sheet

Section number 7 Page 1 (Arthurdale)

An interesting landscape feature on the 1936 maps is the small corners cut out of the lots of the original Hodgson house plats to provide play space for children. Reserve land shown on the original maps was to provide a community park on the northwest corner of the community, to provide room for future expansion, or to designate land unsuitable for building.

Houses

Louis Howe ordered the first 50 houses for the community in his goal to get people into the community quickly. These were the famous (or infamous) Hodgson houses, prefabricated houses designed as New England summer cottages which were ill-suited to the harsh Preston County winters because they were poorly insulated and lightly built. Also, their dimensions (10' x 40') did not fit the foundations already dug for the houses. In some cases, the brick fireplaces were as much as 8 feet from the outside walls of the prefab houses. In mid-November 1933, Eric Gugler, a New York architect, came to Arthurdale with Howe and Eleanor Roosevelt to take over responsibility for correcting the problems with the houses. Gugler designed ways to extend the walls of the 1-story white houses by adding rooms.

Each Hodgson house was made of prefabricated sections that were bolted together in plans known as the "I", "T", "H", and "L" plans, as shown on the attached maps. A few (particularly on E Road) seem to have a miscellaneous plan. Each house had frames of Oregon cedar and pine, with siding of cedar shingles. Residents soon learned that problems caused by the construction and poor insulation meant that paint would not adhere well to the original siding, and they have often covered the original with aluminum siding. We feel this is a historically significant alteration that reflects a design defect in the original houses. Roofs for these houses were originally standing seam metal roofs; these are still visible on some of the Hodgson houses. Walls of the 4-6- room houses were covered on the interior with a sheathing of building paper and one thickness of fiber wallboard. Some walls, i.e. in the living room, were wood-paneled. Most windows were double-hung 6/6.

Costs rose as each house got a separate well with electric pump, a separate septic system, a special grease trap costing \$37.50, indoor plumbing, and additional furnaces to supplement the inadequate woodburning fireplaces originally planned for heat. The fireplaces were lined with regular brick, not firebrick. Coal furnaces provided forced air heat. Electricity was provided to all the homes from the beginning. Indoor plumbing (and, later, refrigerators and washing machines) were particularly controversial because most of rural America, and certainly most of rural West Virginia, did not have such conveniences in 1933.

National Register of Historic Places Continuation Sheet

Section number 7 Page 2 (Arthurdale)

The first houses were completed in March 1934 and opened for inspection. The first group (50 houses) was finally finished in June 1934, and the first homesteaders moved into them then in late June and early July. Residents were charged from \$45 to \$52/month for rent, depending on the size of the house and the amount of ground. This payment only lasted for about a year because residents only made about 30 cents an hour for an 8-hour day; residents then requested lower rent payments, and the government did lower the rates. The Farm Security Administration eventually estimated that the houses cost, not \$2,000 each, but \$8,550, including the wells and sewage systems, outbuildings, cost of land, and landscaping.

Eleanor Roosevelt asked her friend Nancy Cook to plan the interior of the houses. Cook was Eleanor's partner at the Val-Kill furniture plant. The Civil Works Administration paid women to make curtains, sheets, and pillow cases for each house while the Mountaineer Craftsmen's Cooperative Association made colonial-style furniture and kitchen cabinets to complement the brick fireplaces and wood-paneled walls. Residents of the first 50 houses were given furniture free of charge, according to need, but the government tried to keep track of the furnishings and equipment issued so that residents could eventually pay the amount due. It is not clear if residents ever did pay for these furnishings and tools. Furnishings were not distributed equally because, in part, the supply was not available, needs varied, and residents had different requests. Homesteaders in the second two groups received even less furniture, the grade of lumber used was not as good, and the finishing work was not as complete.

In December 1934, construction began on the second group of 75 houses. These were known as Wagner houses because designs were started by Gugler but finished by Stewart Wagner, a consultant in the Housing Division of the Public Works Administration. This second group included houses that were more substantial and usually larger than the Hodgson houses, with 1 1/2 stories, cinder block raised foundations, frame upper stories, and wood siding. But mistakes were still made as the parquet hardwood floors were laid on a cement base, causing them to bow in humid weather. Only 6 houses had basements; those had cedar-shingled hipped roofs instead of the normal cedar-shingled gable roofs. The houses had 5 - 6 1/3 rooms each, and all had indoor plumbing and furnace units, plus barns, hog and hen houses, and root cellars. The houses were "all electric" (except for heating) because Eleanor and Howe wanted to experiment with the use of electricity in rural areas. These houses were finished in 1935 at a cost of \$8,151 per unit, including outbuildings, land acquisition, and improvements. Heating was provided by coal-fired steam or hot air furnaces; these houses had radiators.

National Register of Historic Places Continuation Sheet

Section number 7 Page 3 (Arthurdale)

In the summer of 1936, construction began on the last group of houses. These had stone veneers cut from stone from a nearby hillside. The smallest of these was a 1 1/2 story bungalow with the first floor covered with native stone and the attic wood framed. The others were designed in an English tudor style like bungalows, while a third group of 2-story houses was built in a colonial style and was entirely stone covered. All had 6 rooms (2 with 6 1/2 rooms), stone fireplaces, and the same equipment as the Wagner houses. The last one was finished in 1937.

Outbuildings were important to the subsistence homestead economy, and all but 7 of the 165 buildings had barns, hog houses, and poultry houses. Root cellars were added for 108 houses (those that did not have basements) in 1938, and therefore they are not shown on the enclosed 1936 maps. The Resettlement Administration, which took over administration of the project in May 1935, added 160 smokehouses at a cost of nearly \$38,000. Most of the root cellars still exist, as do many of the smokehouses that appear to be entrances to the root cellars. Barns have usually been enlarged, often to convert them to garages. Some corncribs still exist; corncribs could also be built inside the barns.

New housing has been built in Arthurdale since 1947 on reserve land and on parcels cut from the original homestead plots. Much of this new housing is for descendants of the original homesteaders. It varies from expensive to low-cost, from two-story to mobile homes, but it does not detract from the overall plan of Arthurdale because new roads have not been created to provide access to these houses. New outbuildings, i.e. garages or additions to provide garage space, have been added to existing homes, since individual garages were one amenity the federal government did not provide for people.

See continuation page 9 of section 7 for description of survey methodology and continuation pages 10-33 for section 7 for descriptions of individual houses.

Community Center

The community center buildings were located on 3 sides of an open quadrangle. To provide a community center for the homesteaders, the government bought a historic Presbyterian church from the Reedsville-Masontown area, disassembled it, and put it back together in Arthurdale. The large wood-frame gable-roofed structure sits on a concrete block foundation; a portico with gable roof was added when the church was reconstructed in 1933-34. The northernmost of the 4 wood pillars supporting the portico had been taken down at some point and was replaced in 1987. The old church was used for church services organized by residents, an assembly hall, and place for dances and plays; the federal government, because of

National Register of Historic Places Continuation Sheet

Section number 7 Page 4 (Arthurdale)

separation of church and state, could not provide a church building. Residents built a woodworking shop under the building. On the north side of the church, there are two small wood frame rooms; on the south side, there used to be a white wood plank wall hiding the roof of the work space below. When that wall is reconstructed, the west side of the quadrangle will be identical to the 1930s photograph when viewed from the quadrangle. Stone steps lead down to the basement area on the south side of the complex, and these were uncovered in 1987 after being hidden in piles of debris. The community center complex was almost finished by September 1934 when it was used for nursery and high school classes. In January 1936, a general store opened in the center. Over the years, other activities in the center complex included a tearoom, barber shop, weaving room, post office, administrative offices, and a salesroom for the furniture of the Mountaineer Craftsmen's Co-operative Association.

The ground level buildings on the south side of the complex were destroyed by a fire about ten years ago; they were wood frame buildings that can be seen in the attached historic photographs. Field stone foundations of the buildings on the ground level on the south side are now visible, after having been covered with debris for a decade. Those will be interpreted as foundations. The garage complex under these buildings still exists, except that the tarpaper roof is badly deteriorated. On the southwest corner of the complex, at the basement level, is the central power plant that serviced the whole community center complex, including the stone buildings. The original boiler is still intact, complete with instructions for operation.

On the north side of the quadrangle, two stone buildings served as the administration building and forge. The administration building is 1 1/2 stories tall and has a cedar shingle roof which was replaced in 1987 as part of the restoration of the center. The interior framing is of chestnut. The center section is open to the ceiling, while there are small offices/rooms on the east and west ends on the first floor and balconies above those. There is a stone fireplace on the east end of the center room. Original multi-light window and door sashes were restored in 1987, salvaging as much of the original fabric as possible. The forge is a large open single-room building with an oriel window on the south end as a display area for forge products; a fireplace on the north end serviced the forge. The original cedar shingle roof has deteriorated and will be replaced in 1988 with new cedar shingles. The forge made the lighting fixtures and hardware for the houses and other community buildings, as well as products for sale. The last building on the north side is a service station built in the 1930s, containing a small room as an office and two restrooms. This area also contained the 1930s grease pit and the stone service bays for the community garage. According to residents, this is where community farming equipment was kept, and it was always a "working" area.

National Register of Historic Places Continuation Sheet

Section number 7 Page 5 (Arthurdale)

Schools

In the spring of 1935, construction began on a complex of 6 school buildings, including (from west to east), a recreational building/gymnasium (which included a basketball court and stage for community productions), a high school/junior high school building, school center building (cafeteria, home economics rooms, canning rooms to prepare food for school lunch program, and offices), elementary (grades 4-6), and primary school buildings (grades 1-3), and a nursery school. Four of the white frame buildings still stand and are used as school buildings. Fire doors have been added to the buildings, and a macadamized surface over the original stone walls and ramps have been added to make the buildings accessible for disabled students.

The white frame gymnasium/recreation building has horizontal wood siding and multi-lite (usually 6/6) double-hung windows. A few windows have been boarded over, but the frames still remain. The various roof lines denote the variety of spaces to be spanned in such a building, and siding on the extended walls over the gymnasium section is board and batten. The entrance is marked by a triangular pediment supported by 6 wood pillars. There is a small gable hood or shed roof hood over each door other than the main entrance.

The high school/junior high school building is a wood frame building with horizontal wood siding and gable roofs. The east and west ends are one-story in height, while the center is two stories. Multi-light wood frame double-hung windows are generally 12/12 on this building. There is a gabled portico supported by two wood pillars at the entrance. This building had a greenhouse attached to it so that students could raise plants for sale; the greenhouse is still there. The high school/junior high school building is now used as Valley Junior High.

The school center building is two stories in the front and 1 1/2 stories in the rear. It is a wood frame building with horizontal wood siding and wood framed multi-lite double-hung windows (primarily 12/12). Gable roofs cover the various sections of the building. There is a small gable-roofed portico over the main entrance. Ramps provide access to the double doors in the middle of the west side of the building. There is a large brick chimney in the back of the building. There are no longer offices in the school center building; it is now used as a cafeteria and classrooms.

The elementary school building is a one-story wood frame building with horizontal wood siding and various gable roofs. There is a large brick chimney in the center. Multi-lite double-hung wood frame windows are 12/12

National Register of Historic Places Continuation Sheet

Section number 7 Page 6 (Arthurdale)

or 6/6 in most cases. The entrance is marked by a portico with gable roof and wood pillars. The elementary and primary school buildings had running water in each classroom to provide water for crafts. The nursery building had a bathroom in each classroom. There were also 3 sleeping porches enclosed with glass on the nursery building so children could rest. There were 4 separate playgrounds for the nursery building, one for each age group (2-5 years old).

After Preston County took over the schools about 1938 and all federal (WPA) and private money was withdrawn, the county only wanted to operate four buildings. The primary and nursery school buildings were converted into factories during the war, were then used as chicken houses by Ruby Enterprises, and were eventually demolished.

The Preston County Board of Education has since built two new buildings west of the original school complex, but the linear "campus" setting of the original complex remains. Both the new buildings are used for Valley Elementary School classes.

The white building back of the school complex was the pottery. It was built about 1936. It is now a storage room for the school.

Inn

The Arthurdale Inn was built to provide accommodations for all the visitors who came to Arthurdale. While many wanted to save the Arthur mansion, Rexford Tugwell of the Resettlement Administration ordered the mansion to be demolished and an Inn built. Plans were available by early 1936 but the Inn did not open until late May 1938. The two-story stone building has a gable roof and horizontal wood siding on the gables and shed dormers. Windows are wood frame, double-hung, and multi-lite (usually 12/12 or 9/9). Shed dormers, gable-roofed dormers, and oriel windows add variety to the fenestration. There is a shed-roofed porch at the main entrance on the east side of the building. The exterior is original on the exterior except for a porch that was remodelled and enclosed on the southwest corner.

The Inn included 20 guest rooms, a dining room, and terrace; furnishings were from the Mountaineer Craftsmen's Cooperative Association. The first floor entry area, lounge, bathrooms, and sleeping rooms still remain in their original condition, complete with a print of George Washington autographed by Franklin D. Roosevelt for the people of Arthurdale in its original location over the fireplace in the lounge. The building is now in private ownership, and walls have been removed on the second floor to provide larger bedrooms for the family.

United States Department of the Interior
National Park Service

National Register of Historic Places
Continuation Sheet

Section number 7 Page 7 (Arthurdale)

The large white frame (2-story) garage on the south end of the inn complex was built about 1985 by the current owners, in part to house equipment for their construction business.

Factories

Several factory buildings were constructed in Arthurdale in the late 1930s. On the north edge of the homestead community, these are now within the corporate limits of Reedsville but are nominated here because of their significance to Arthurdale. The two-story white concrete block building on the south side of the road leading into the factory complex was not built by the federal government and is excluded here. On the north side of the road, from west to east, are a one-story building with flat roof, a one-story building with gambrel roof, a 1 1/2 story building with gable roof, and a 1-story building with monitor roof. The two buildings to the east (gable and monitor roofs) have multi-light arched windows.

The Preston County Sheltered Workshop (employing the handicapped to make simple craft items) and Fibair (making insulation) are in the factory complex now. The smaller brick building is not being used at all now.

Farm Buildings

The only building included in the property nominated here that was associated with the commercial and cooperative farming life in Arthurdale is the former chicken house. This two-story yellow-sided building on the west side of Route 92 on the north edge of Arthurdale was built by the federal government as a chicken house. The old farmhouse nearby predates Arthurdale's development and was retained by the federal government as part of the chicken farm; they may even have housed chickens in the building. At various times, these buildings were converted to housing for people, then back to housing for chickens or turkeys, and have since been converted back to housing for people. The building retains little of its original integrity.

Other buildings extant from the farm at Arthurdale are now owned by West Virginia University and will be nominated to the National Register as part of a multiple property listing prepared for all West Virginia University farm properties. That nomination is now being prepared. It is easier, from a bureaucratic point of view at West Virginia University, to nominate the farm properties now owned by the university at one time so that the university can properly evaluate its holdings and determine its priorities.

United States Department of the Interior
National Park Service

**National Register of Historic Places
Continuation Sheet**

Section number 7 Page 8 (Arthurdale)

Demolished Buildings

In addition to the two missing school buildings, the only parts of the original community that have been demolished are the 22-room Queen Anne Revival (1903) Arthur Mansion (demolished by the federal government to build the Inn), the Fairfax cabins (also demolished many years ago in 1930s?), and the south section of the community center complex, which burned in the 1970s. A ca. 1950s deteriorated nondescript 1-story concrete brick building at the community center complex was removed in 1986 as part of the restoration effort.

New Construction

In addition to new housing, major new buildings are the school buildings and the church. The church was built in the 1950s as a community endeavor. This gable-roofed stone building sits on a raised foundation, providing space for a basement meeting room and kitchen beneath the sanctuary. There is a balcony on the north end of the building, with the altar area on the south end. It was clearly designed to fit the environment of the stone administration building/forge area and the stone Inn. Built as a community enterprise, but now part of the United Presbyterian Church, the church also embodies the cooperative spirit fostered at Arthurdale. Plans were underway for the church from the 1940s, as the community united to raise the needed funds. Eleanor Roosevelt made her last visit back to Arthurdale to dedicate the church in 1960.

The factories are described above.

Survey Methodology

Because of Arthurdale's importance in community planning, we decided to nominate the entire site, including the pieces at the corners that were reserve land and now have a few new houses on them. These sections are so small (and the houses on them take up so little room) that it seemed better to protect the entire homestead community. The only land excluded is a small section of the experimental farm on the north end of the homestead, since this area is now part of the West Virginia University farm complex. A 1936 tax assessor's map, showing all buildings and outbuildings (except root cellars which had not yet been built), fences, and septic fields was available at the tax assessor's office but could not easily be reproduced because of its multiple large (40" wide sheets). Xeroxes of several sections of that map are included here to show the detail available.

The attached two maps are keyed to the description of houses below. The base map for the district nomination is a large map that hung in the

United States Department of the Interior
National Park ServiceNational Register of Historic Places
Continuation SheetSection number 7 Page 9 (Arthurdale)

administration building during the federal government's control of the project; unfortunately, we do not know the exact date of the map. It shows residents at the time it was made and the original division of lots. We have added the house types for the original 165 houses on the first map and then added to those 165 houses the houses built since 1947 and the lot lines and tax assessor's plot numbers to create the second map. All new houses (which would be intrusions in the district) were then added to the map, indicating if they were trailers, ranch style houses, etc.

A windshield survey by Iris Allsopp, using guidelines established by Barbara Howe and Elizabeth Nolin in cooperation with the Allsopp and Glenna Williams, noted whether the original houses were 100% complete, 75% complete (minor additions, enclosed porches), 50% complete (additions equal to or greater than the size of the original house), 25% complete (something visible of original house), or 0% complete (original house too altered to be identifiable). Photos of houses judged to be in these categories were taken to illustrate the standards used. Aerial photos from the 1930s and 1980s illustrate the fact that the original community plan is still in existence, although the growth of trees over the years obscures some original views.

A "road by road" description of the houses follows and is keyed to the attached maps. The maps which identify properties by tax assessor's parcel numbers since there are no street addresses used in Arthurdale for other than the original houses. Even there, houses are identified as A-1, A-2, etc.

Houses are coded as follows: Hodgson-I ("I" style or shotgun style); Hodgson-T ("T"-shaped plan); Hodgson L ("L"-shaped plan), Hodgson-H ("H" shaped plan); Hodgson-? (too altered to tell); Hodgson-M (miscellaneous plan); Wagner-1 (1-chimney style, with cinder block 1st floor and frame 2nd floor), Wagner-2 (2-chimney style (1 fireplace and 1 cookstove; cinder block 1st floor and frame 2nd floor); Wagner-1 1/2 (1 1/2-story style (cinder block 1st floor and frame 2nd floor); Wagner-? (too altered to tell); Wagner-H (Wagner period, 2-story square, hipped roof); stone-2s (2-story, all stone facade); stone-1 1/2 (1 1/2-story, stone 1st floor and wood 2nd); stone-2 (2-story, stone 1st floor and wood 2nd); stone-? (too altered to tell); teacher's house.

National Register of Historic Places Continuation Sheet

Arthurdale Historic District

Section number 7 Page 35

Section 7, page 9 indicates that the pre-1947 houses were categorized as 100% complete, 75% complete (minor additions, enclosed porches), 50% complete (additions equal to or greater than the size of the original house), 25% complete (something visible of original house), or 0% complete (original house too altered to be identifiable). We feel that houses that are 50%, 75%, and 100% complete are definitely contributing to the National Register historic district and should be so counted. Houses that are 25% or 0% original may be added to the noncontributing list if the Register staff so wishes. Please note that it is impossible to date alterations on these houses, but it is very likely that all alterations to original houses took place after 1947 when they were in the hands of private owners.

Our standards for these decisions can be seen in the following photographs that were sent with the National Register nomination. These illustrate the houses shown in the materials sent as part of section 7 of the nomination.

F-6: 100% original Hodgson-T. The roof over the stone porch is a small addition that does not detract from the original design of the house. Also, the stone porch is original to the house; most Hodgson houses had a stone patio or porch in front. The aluminum siding is an alteration to accommodate the fact that these summer cottages were poorly insulated and never held paint well. Therefore, it is part of the evolution of the Hodgson house at Arthurdale.

O-3: 100% original Hodgson-T. No changes except for railing on front porch and use of aluminum siding, again because of problem of paint peeling on original siding.

Q-10: 100% original Wagner-2 house. Several photos of this house are included in the package to show outbuildings and the interior.

BB-3: 100% original Stone-1 1/2 house.

M-14: 100% original Stone-1 1/2 house.

S-4: 100% original Stone-1 1/2 house.

F-4: 75% original Hodgson-I. Instead of original porch running length of house to left of house, porch has been enclosed with a small room at the back (left of photo) and enclosed entry in center of photo. 6/6 windows beneath porch are proof that house is on its original foundation.

O-6: 75% original Hodgson-T because of addition to rear of house. From road, house appears to be 100% original except for new railing on porch.

U-15: 75% original Stone-1 1/2 house. Original house is on right and is intact except for section where room has been added to left. Garage has been added onto

United States Department of the Interior
National Park Service

National Register of Historic Places
Continuation Sheet

Arthurdale Historic District

Section number 7 Page 36

that room. Since garage is in stone, it matches original house well and in no way overpowers original house.

E-5: 50% original Wagner-1. The original part of this house is to the left. Aluminum siding has been added. The garage and second-floor apartment were added in the mid-1980s.

U-12 50% original Wagner-1 1/2. The original house is visible on the left with the center chimney, but the front porch has been enlarged and enclosed, and an addition with garage has been constructed on the right side of the house. This addition apparently encloses the side/back entrance to the house.

U-14: 25% original Wagner-1. While the original shape of the house is intact, complete with the distinctive shed roof over the door, there has been an addition on the left side, the front and side back porches have been enclosed, and the house has been resided.

Q-2: 0% original Wagner-1 1/2. The original shape of the Wagner house is visible in the 1 1/2 story section with the center chimney, but a front room and porch, garage, and connecting room have been added. Also, the house has been resided with brick.

The period of significance is from 1933 to 1947, to indicate the length of time the federal government was involved in the project. While 1947 is obviously less than 50 years ago, this site has such overriding national significance as the first of these federal New Deal "new towns" that it deserves to be listed on the National Register now. Only minor construction was done by the federal government after 1938, so almost all of the federal-period buildings are now 50 years old.

The area designated for listing is all of the original community, with the exception of a small portion of the experimental farm lands near the factories. Again, it is historically important to protect this original plan insofar as possible, even though a few new houses have been built on reserve land at the corners of the district.

National Register listing, then, should be the first step toward National Historic Landmarks designation for this site under the NHL social and humanitarian theme.

History and Significance

Arthurdale is a small community in Preston County, West Virginia, about 15 miles up the mountain from Morgantown. When the depression hit in 1929, unemployed miners in areas such as Scotts Run, just outside Morgantown, had no options and no work. By April 1933, 63% of the population in the coal camps was unemployed -- part of the 41% (c. 20,000) unemployed in the Morgantown's Monongalia County.

The earliest efforts to provide relief in the coal camps, as elsewhere in the country, came through private endeavors; the local Council of Social Agencies, for example, coordinated the activities of groups like the Salvation Army and the American Friends Service Committee. The West Virginia University (WVU) Agricultural Extension Division, was also involved in relief activities and pushed the concept of subsistence home gardens. Two key figures in Arthurdale's development got their start in these activities -- Bushrod Grimes and Clarence Pickett. Grimes was a WVU extension staff member who organized the best subsistence garden program in the state in Monongalia County with the support of the Council of Social Agencies and the American Friends Service Committee. Pickett, executive secretary of the Friends Service Committee, saw these gardens as an important part of the relief and rehabilitation effort needed in the coal fields.

By working in Scotts Run, Grimes, Pickett and others undertook a huge challenge. In a 1935 Atlantic Monthly, William Brooks described Scotts Run

United States Department of the Interior
National Park ServiceNational Register of Historic Places
Continuation SheetSection number 8 Page 2 (Arthurdale)

as "the damndest cesspool of human misery I have ever seen in America." Eleanor Roosevelt would call it "the worst place I'd ever seen." While former residents of Scotts Run remember conditions as not that bad, the fact that outsiders like Eleanor Roosevelt felt they were that bad is important -- without her perception of the problem, she would not have pushed for a solution.

The seeds of the solution were also in Scotts Run. At the Crown mine, Bud Godlove, a mountaineer chairmaker, was recruited to train men to make the Godlove chair that would be made famous in Arthurdale. That shop merged with other cooperative activities to form the Mountaineer Craftsmen's Cooperative Association which did metal work, needlework, and weaving in addition to woodworking. The Mountaineer Craftsmen's Association later opened a shop in Arthurdale.

Stephen Haid, author of "Arthurdale: An Experiment in Community Planning, 1933-1947," also notes the development of the back-to-the land movement in the 1920s as an important predecessor to the Arthurdale story. Three bills were introduced in Congress in 1932 to encourage subsistence homesteads, but none passed. After his election in 1933, Franklin Roosevelt began to push the subsistence homestead idea, and Milburn L. (M.L.) Wilson became the first director of the program. FDR and Wilson committed the federal government to a subsistence homestead program.

Wilson had in mind a three-pronged attack on the issue of subsistence homesteads. First, he felt that the best solution was to combine subsistence farming with part-time industrial employment; one had to take industries to the subsistence homestead location and one had to get people stranded in rural areas to give up submarginal land to move to these new communities. Wilson also promoted the idea of handicrafts as an "outlet for individual expression as well as a means of income supplement." Both industry and handicrafts would be part of the Arthurdale economy.

In May 1933, as part of the First Hundred Days legislation, Congress passed the National Industrial Recovery Act. Section 208 of Title II provided the funds for the subsistence homestead program to be administered by the Division of Subsistence Homesteads of the Department of the Interior. The division contemplated five types of projects, including ones to rehabilitate stranded industrial populations, especially populations of bituminous coal miners. Arthurdale was the first and most prominent example of this group of homesteads.

Three months later, in August 1933, Eleanor Roosevelt paid her first visit to Scotts Run at the invitation of the American Friends Service Committee and at the request of FDR. Eleanor and Louis Howe, FDR's personal

United States Department of the Interior
National Park ServiceNational Register of Historic Places
Continuation SheetSection number 8 Page 3 (Arthurdale)

secretary, decided that the people of Scotts Run had to be moved to a new environment to alleviate their problems and to dampen the possibility of a communist revolution. Bushrod Grimes used Eleanor's visit as an opportunity to explain that WVU extension staff had registered at least 400 miners for the c. 49 tracts of land already identified.

The ag extension agents were especially interested in the Richard M. Arthur farm, about 15 miles from Morgantown in Preston County. WVU had already been using part of the farm for agricultural experiments. Within a week of Eleanor's visit, Louis Howe told Wilson that he, FDR, and Eleanor had agreed that the federal government should purchase the Arthur Farm immediately and secretly. Grimes acted as the agent for the U.S. Department of the Interior and purchased the 1,018 acres of land and 22-room 1903 mansion for \$35,000 from Arthur, an elderly Pittsburgh hotelkeeper who was about to lose his land to the state for back taxes anyway. In addition to the mansion, the property included a log cabin built by the slave foreman of Col. John Fairfax, who purchased the land in 1789. Large areas of the farm were also in a glade or marsh so that the whole area would have to be drained with tiles to be productive for farming. The tiles are still essential to the community's drainage system. Grimes also purchased a few surrounding tracts, all under 100 acres each.

On October 12, 1933, Harold Ickes, Secretary of the Interior, publicly announced that the farm had been purchased as a homestead demonstration project for unemployed miners. Each family was to get a home plus 2-4 acres for farming. Homes would cost about \$2,000 each, and the community would be self-governing like a New England town meeting. A factory to produce equipment for the Post Office would provide supplementary income.

The next step was to choose those who would be homesteaders. Grimes and others were a committee to make the selection. By mid-October there were over 600 applicants for the homesteads. While the selection committee wanted to help those who were truly needy, a more important factor came into play -- there seemed to be a consensus that the most important criteria was to choose people who would make the community work. No one with a shady moral character would be accepted. Grimes also felt it was so risky an experiment that they had to find people with "a much higher quality of intelligence, perseverance and foresight" than would later communities. In addition to have the "proper" attitudes and a certain level of education, homestead applicants also had to know something about farming, had to have proven their success in the subsistence gardens set up by Grimes, and had to be physically fit. Homesteaders had to be native-born and white, although both immigrants and blacks lived in Scotts Run. Racial segregation was enforced, ostensibly, because black homesteaders in the West Virginia of the 1930s would have required a segregated school system. Of the first group of

United States Department of the Interior
National Park ServiceNational Register of Historic Places
Continuation SheetSection number 8 Page 4 (Arthurdale)

50 families, most came from a northern European background; about 1/2 were miners, about 1/4 sawmill hands, and about 1/4 farmers. Most were natives of West Virginia, but not all lived in Scotts Run. Eleanor Roosevelt sent a delegate to help in the selection process since all the homesteaders had to be approved by the federal government. Other residents were recruited because of particular skills needed to make the community work, i.e. blacksmithing and carpentry.

By early November 1933, the Arthur farm had been surveyed and the work of building the community began under the direction of Bushrod Grimes, the first project director. The men ate and slept in the "Red Onion" in Reedsville (still standing but never part of the Arthurdale tract and now heavily altered so not included here). The men later moved to the Arthur mansion, living there in barracks-style while building the new community. With some help from men in a nearby Civilian Conservation Corps camp, the homesteaders begin to tear down old buildings and fences and clear brush in November. On November 8, they began to excavate the foundations for the first house and elected officers for the Homesteaders Club, the first organization in the new community.

The first residents finally moved into their new homes in June 1934. They were expected to participate fully in the life of the community and to be self-sufficient on a daily basis. They farmed their plots of land and canned the surplus; having access to these gardens and room to store the surplus meant a better diet and better health for the residents. Residents shopped, played and met, and some worked in the community center. The homesteaders organized in the Homesteaders' Club (for men) and the Eleanor Roosevelt Farm Women's Club (now an Extension Homemakers' Club) to learn skills needed in their new environment and to build esprit d'corps.

The WVU Ag Experiment Station helped homesteaders decide what to plant. Each homesteader was to clear one acre for vegetables, one for wheat, and one for forage crops to feed their cows, pigs, and chickens. In addition to the individual farms, about 440 acres were plowed and planted in vegetables and potatoes as part of the agricultural co-op program. These individual farms were much more successful than the dairy and poultry co-ops that were tried over the years. The dairy farm buildings still stand as part of West Virginia University's Reedsville Farm, while the poultry co-op building still stands at the north edge of the community but has been extensively remodeled to serve as apartments.

Educational System

Elsie Clapp was hired to organize an educational system for Arthurdale. As a disciple of John Dewey, she established a progressive educational program

United States Department of the Interior
National Park ServiceNational Register of Historic Places
Continuation SheetSection number 8 Page 5 (Arthurdale)

that included six school buildings to support 165 families. Dewey himself served on the National Advisory Committee (a.k.a. Arthurdale Sponsoring Committee) for the schools. Project architect Eric Gugler designed the complex so that children could attend a nursery, elementary, intermediary, and high school in Arthurdale; the recreational building and school center building served all children. Clapp brought some teachers with her and also trained local teachers from the Preston County system. Teachers lived in the community in designated "teacher's houses" and participated fully in the social life of the community.

The unaccredited Arthurdale schools were not part of the county system because of their "unorthodox" programs. Students followed the physical development of their community by learning math through surveying the community as the men planned roads and buildings. Arthurdale was to keep alive the Appalachian heritage, and students did that by learning pioneer crafts that they practiced in the Fairfax slave cabin (now demolished). The recreational building was the community center for square dances. Eleanor Roosevelt attended every graduation of Arthurdale High School during FDR's administration, and FDR attended his only high school graduation as president when he visited Arthurdale in 1938.

When Clapp left in July 1936, amid frustration from private supporters like Bernard Baruch that the community was not more self-supporting, the school system went under the control of the Preston County Board of Education. The curriculum became more "standard," with lingering progressive activities more the result of personal preference on the part of the teachers who had worked under Clapp.

Medical System

Medical care in Arthurdale was provided by doctors and nurses hired by the federal government to practice in the clinic built by the government. Clapp established the medical program during the 1934-35 school year, with a school nurse and doctor. Well-baby clinics and dental care were among the tangible benefits offered residents, who generally enjoyed much better access to medical care than they had before moving to Arthurdale. They probably also enjoyed much better care than other rural residents of the county. The doctor's house and clinic still stand on E Road.

Employment

Cooperative efforts and community-owned businesses were encouraged at Arthurdale. Homesteaders first discussed organizing co-ops in the summer of 1934 and formed a branch of the Mountaineer Craftsmen's Co-operative Association in January 1935. The general store, for instance, was run by

United States Department of the Interior
National Park ServiceNational Register of Historic Places
Continuation SheetSection number 8 Page 6 (Arthurdale)

the Arthurdale Association, a non-share West Virginia corporation that received loans from the federal government and was chartered with the help of the Resettlement Administration.

Employment for homesteaders after the construction work was finished became a major problem. Due to political pressure, the hoped-for post office equipment factory never materialized. Finding and financing industries to move to Arthurdale became a constant struggle. In December 1933, the Federal Subsistence Homesteads Corporation was chartered to organize local corporations for the homesteads, making it legally possible for the feds to have contracts with the homesteaders to eventually give them ownership of their property. The corporation then gave funding to the Arthurdale Association to erect a factory building for the Electric Vacuum Cleaner Co. of Cleveland, which agreed to operate a factory in Arthurdale. In the aerial photo of the factory area, this is the building that has a gambrel roof. The factory building was almost complete by July 1935 and a lease was signed with the vacuum cleaner company in April 1936. The factory closed in the summer of 1937 after only 13 months of operation, a victim of the recession of that year. The Phillips Jones Shirt Co. moved into unused space in the factory in 1937 and employed 34 women making Van Heusen shirts by June (all the industries seem to have been sex-segregated). The plant closed in October of that year, opened again in March 1938, and closed for good in August 1938.

In August 1938, the Arthurdale Association reached an agreement with American Cooperatives, Inc., a wholesale coop operation that made fertilizer and other farm products, to move its tractor assembly plant to Arthurdale. That operation closed in April 1940 after a year of operation.

Then FDR directed the War Department to get some type of plant operation into Arthurdale because there were two empty factory buildings available. In April 1940, Silman Manufacturing Co. moved into part of the tractor factory to make walkie talkies, public address equipment, and flares. It hired mostly women. The next year, 1941, the Brunswick Radio and Television Co. moved into the craft shop of Mountaineer Craftsmen and part of the tractor factory to produce cabinetry, radio chassis, record players, and speakers. It closed at the end of 1942 as a result of market glut. Finally, in 1942, Hoover Aircraft Corporation opened a plant in Arthurdale, occupying all 3 factories and the inn until the end of the war while they manufactured wooden planes to train pilots.

Conclusion

By 1939, efforts were underway to reduce the federal presence in Arthurdale. When Milford Mott arrived in 1941, his duties as the last community manager

United States Department of the Interior
National Park Service

National Register of Historic Places Continuation Sheet

Section number 8 Page 7 (Arthurdale)

focused on liquidating the government's interests in Arthurdale. By 1947, all the houses and other buildings had been sold to homesteaders and other individuals or corporations. Four school buildings were deeded to the Preston County Board of Education -- the other two had been converted to factories during World War II and are now gone. Farm land was sold to WVU for \$1 to add to the university's existing experimental farm. The cemetery was deeded to the residents of Arthurdale.

Arthurdale is still an unincorporated community. New housing has been built, as shown on the attached maps. The community celebrated its 50th anniversary in July 1984 and, in October 1985, organized Arthurdale Heritage, Inc., which now owns and is restoring the community center complex.

Arthurdale Historic District

Summary of Significance

At the height of the Great Depression in 1933, a significant event occurred in the social history of the United States. The U.S. Department of the Interior's Subsistence Homesteads Division created Arthurdale. Arthurdale was an agricultural settlement to which 165 unemployed families from Monongalia and Preston counties in West Virginia came between 1933 and 1937 to escape hard times and form new hopes and dreams in a spirit of pioneer neighborliness and cooperation. The homestead community at Arthurdale was the first of its kind in the U.S. and was a favorite project of First Lady Eleanor Roosevelt. The federal government operated Arthurdale until 1947 when it ended its involvement in the project because of setbacks in its finances, administration and political backing.*

National Register of Historic Places
Continuation Sheet

Section number 10 Page 1 (Arthurdale)

The property nominated totals 1102 acres. All properties constructed prior to 1947 are considered to be contributing to the district, with the exception of the chicken house/converted to apartments, which has been so heavily modified. Any properties built since 1947 are considered to be intrusions to the district, including the two new schools, the 1960 community church, new houses and outbuildings, etc.

Arthurdale is listed on two USGS maps, which have been taped together here to show the total boundaries. The UTM coordinates listed below are keyed to the letters on the USGS map. This district map as drawn on the USGS map was drawn by a licensed professional surveyor from the base map used for this nomination. He was also responsible for calculating the acreage.

The UTM coordinates being on the Newburg quadrangle as follows:

A:17-599860-4372040

Nomination Return Sheet

Arthurdale Historic District
Preston County, WV

The nomination form does not address the issue of integrity of the properties listed as contributing. In Section 10, page 1, it is noted that all properties constructed prior to 1947 are considered to be contributing. From the individual descriptions of properties in Section 7, it is apparent that the contributing category includes at least 14 properties that have 0% original building materials remaining, 14 buildings having only 25% original fabric, and a further 26 having only 50% original materials.

Date of construction alone is not sufficient to confer contributing status on a property; in addition to dating from the period of significance, properties must retain sufficient original building fabric to recall the defined period and areas of significance. Please reevaluate the categories of contributing properties and provide an analysis of integrity as it relates to alterations to the properties over time.

Preston County Commission
Preston County Courthouse
Kingwood, West Virginia 26537

Dear Commission Members:

We are pleased to inform you that the property in your county, the Arthurdale Historic District, Preston County, West Virginia, will be considered by the Archives and History Commission for nomination to the National Register of Historic Places. The National Register of Historic Places is the Federal government's official list of historic properties worthy of preservation. Listing in the National Register provides recognition and assists in preserving our Nation's heritage.

Listing of the Arthurdale Historic District provides recognition of the community's historic importance and assures protective review of Federal projects that might adversely affect the character of the historic Arthurdale Historic District. If the Arthurdale Historic District is listed in the National Register, certain Federal investment tax credits for rehabilitation and other provisions may apply.

Listing in the National Register does not mean that limitations will be placed on the properties by the Federal government. Public visitation rights are not required of owners. The Federal government will not attach restrictive covenants to the properties or seek to acquire them.

You are invited to attend the Archives and History Commission meeting at which the nomination will be considered. The board will meet on July 7, 1988 at the Cultural Center, Green Room, Charleston.

NOTICE

The Arthurdale National Register Historic District will be considered by the West Virginia State Review Board for nomination to the National Register of Historic Places at the meeting of the Archives and History Commission on July 7, 1988. Inclusive of: Properties within the boundaries of the proposed Arthurdale Historic District encompass the entirety of the originally delineated Arthurdale Subdivision of 1933, excepting that land now shown as a part of the West Virginia University Experimental Farm. Properties included within the proposed historic district include all properties within the community of Arthurdale that are assigned lot number facing the streets of A Road, B Road, C Road, BB Road, D Road, E Road, F Road, G Road, H Road, I Road, J Road, K Road, L Road, M Road, N Road, O Road, P Road, Q Road, S Road, T Road, U Road, V Road, W Road, X Road, Y Road, and those on Branch County Road and State Route 92 that face on said state and county roads.

Listing in the National Register, the Federal government's official list of historic properties worthy of preservation, results in the following for historic properties:

1. Consideration in planning for Federal, Federally licensed, and Federally assisted projects. The Advisory Council on Historic Preservation must be given an opportunity to comment on all federally related projects affecting listed properties. For further information see 36 CFR 600.

2. Eligibility for Federal tax provisions. The Federal Internal Revenue Code encourages the preservation of depreciable historic structures by allowing favorable tax treatments for rehabilitation and also provides for charitable contributions for conservation purposes of partial interests in historically important land areas or structures. For further information see 36 CFR 67.

3. Consideration of historic value in the decision by the State or Federal government to issue a surface coal mining permit where coal is located. For further information see 30 CFR 70 et seq.

4. Eligibility for Federal grants-in-aid, whenever funds are appropriated by Congress. For further information contact William G. Farrar, Deputy State Historic Preservation Officer.

Owners of private property nominated to the National Register may concur in or object to the nomination in accord with 36 CFR 60. Any owner or partial owner who objects to listing should submit a notarized statement (certifying ownership and objection to listing) to William G. Farrar, Deputy State Historic Preservation Officer, Department of Culture and History, The Cultural Center, Capitol Complex, Charleston, West Virginia 25305, by July 7, 1988.

Each owner or partial owner has one vote, regardless of how many whole or partial properties in the district are owned by that property. If a majority of private property owners object to the nomination, it will not be listed; however, the State Historic Preservation Officer shall submit the nomination to the Keeper of the National Register for a determination of eligibility for inclusion in the National Register. If the property is determined eligible but not formally listed, the Advisory Council must still be given an opportunity to comment on Federal projects which may affect the district.

A copy of the nomination, the criteria used for evaluation, and more information on the results of listing are available from the West Virginia State Historic Preservation Office, at the above address or telephone inquiries can be made at 304/348-0240. Comments on the nomination should be received by the WVSHPO before the State Review Board Meeting, July 7, 1988.

NATIONAL REGISTER NOMINATION
COMMENT AND RECOMMENDATION SHEET

NAME: Arthurdale Historic District

LOCATION: Arthurdale, Preston County

*summary paragraphs
7-8*

PROPERTY OWNER: Multiple Ownership

NOMINATION PREPARED BY: Dr. Barbara J. Howe, et al, West Virginia University

NOMINATION SUBMITTED BY: WVU Public History Option

STAFF COMMENTS: The nomination represents a massive research and inventory project carried out by WVU professionals and students, in cooperation with Arthurdale Heritage Inc.

Arthurdale, currently undergoing restoration, was the first of the nearly 100 New Deal communities founded during the Roosevelt administration.

STAFF RECOMMENDATIONS: Staff recommends approval of nomination.

Arthurdale may be eligible for National Historic Landmark designation.

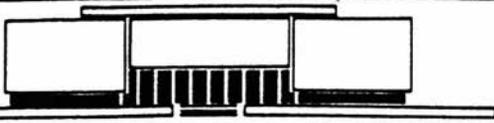

Staff will work with the preparers to insure that counts of noncontributing and contributing resources are exact.

Several blanks, e.g., "exceptions to criteria" will be filled in.

Dear Ms. Shull:

We are submitting for your consideration the completed Inventory Nomination Form for the following historic district:

✓ Arthurdale Historic District, Arthurdale, Preston County, W.V.

This resource has been approved by the State Review Board in accordance with regulations for inclusion in the National Register of Historic Places.

Interest in the nomination of the community to the National Register surfaced five years ago. Since that time, efforts in Arthurdale have focused on the preservation and restoration of the central administrative complex through Arthurdale Heritage, Inc. A community meeting held a year ago also brought people together to work toward preparation of the National Register nomination package. Statewide interest in Arthurdale is stimulated by these activities and by press and media attention that has extended beyond the State's borders.

It is the consensus of professional preservationists in West Virginia that development in Arthurdale over the past fifty years has not seriously damaged the integrity of the community. This would not usually be the case in a town with confined street grids and typical development patterns. Arthurdale, however, is a rural settlement within which new construction has occurred within ample spaces; the affect, this has had upon historic resources has not, in our opinion, been substantial.

Should you have any questions or need of additional information, please feel free to call us.

Sincerely,

William G. Farrar
Deputy State
Historic Preservation Officer

NATIONAL PARK SERVICE

P.O. Box 37127

Washington, D.C. 20013-7127

IN REPLY REFER TO:

H34(418)

APR 29 1993

Honorable John D. Rockefeller, IV
United States Senate
Washington, DC 20510

Dear Senator Rockefeller:

Thank you for your letter of April 6, 1993, transmitting a letter from Ms. Deanna Hornyak, Secretary of the Board of Directors of Arthurdale Heritage, Inc., concerning the Board's request for consideration of the Arthurdale Historic District for National Historic Landmark designation. We have recently responded to a similar letter that Ms. Hornyak addressed to us.

I regret that I cannot be encouraging regarding the consideration of the Arthurdale Historic District for National Historic Landmark designation in the near future. After careful review of the proposed nomination study, we believe that the National Park System Advisory Board, which reviews all such studies, would not recommend the district's designation at this time.

The Arthurdale Historic District is one of some 100 communities included in the "homesteads" programs of the New Deal. This office has not conducted a National Historic Landmark theme study of the many communities associated with this and other New Deal housing programs and none of them have been designated National Historic Landmarks. Many of these communities have only recently attained the minimum age of 50 years that is the threshold normally required for consideration.

A study of these communities would require the examination of all to evaluate their relative importance and state of historic preservation. Besides Arthurdale, few have been listed in the National Register of Historic Places, severely limiting access to comparable material on their current condition.

Congressional mandates to perform National Historic Landmark theme studies of other subjects have presented us with a heavy workload. Among others, these include studies of American labor history, African American history, Japanese American internment, and the Underground Railroad. These circumstances effectively prevent us from scheduling any additional studies of similar complexity until these are addressed, for we would need to divert staff and funds from these mandated studies.

Only if a property were of such self-evident importance that it was clearly head and shoulders above other examples would it be reasonable to present it individually. In that regard, the claim that Arthurdale is of exceptional importance because it was the first of the homestead communities is not highly persuasive, because all were built within a fairly narrow span of time. Review of the Arthurdale nomination also raises doubts as to whether the district, based on its state of preservation, qualifies for Landmark designation as currently proposed. Infill with more recent buildings appears to have been extensive. Many original buildings have been modified. These issues must be taken into account because of the high standard of historic integrity or state of preservation required for Landmark designation.

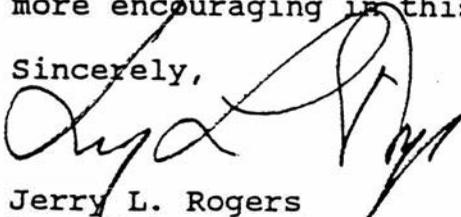

The nomination also excludes an area that is within a university's jurisdiction, apparently for the administrative convenience of the university. This exclusion is not reasonable from an historical perspective; this area should be considered for inclusion.

In summary, then, we have concluded that much additional work on the nomination report is required, as well as full consideration of the place of Arthurdale among all those communities that date from the same period and possess similar historical associations. In the absence of resources to conduct full staff reviews of these issues, we must regretfully defer any additional action on this study, for we believe that its presentation to the Advisory Board in its current form would result in an indefinite deferral, pending the revision of the form and the completion of a study of all similar properties.

Please be assured, however, that, by virtue of its listing in the National Register of Historic Places in recognition of its significance in State and local history, the Arthurdale Historic District is subject to key benefits and protections of Federal historic preservation law. These are cited in enclosures, which describe the National Historic Landmark and National Register programs in detail.

We appreciate your interest and that of your constituents in the National Historic Landmarks Survey and regret that we cannot be more encouraging in this instance.

Sincerely,

Jerry L. Rogers

NOTICE

The Arthurdale National Register Historic District will be considered by the West Virginia State Review Board for nomination to the National Register of Historic Places at the meeting of the Archives and History Commission on July 7, 1988. Inclusive of: Properties within the boundaries of the proposed Arthurdale Historic District encompass the entirety of the originally delineated Arthurdale Subdivision of 1933, excepting that land now shown as a part of the West Virginia University Experimental Farm. Properties included within the proposed historic district include all properties within the community of Arthurdale that are assigned lot number facing the streets of A Road, B Road, C Road, BB Road, D Road, E Road, F Road, G Road, H Road, I Road, J Road, K Road, L Road, M Road, N Road, O Road, P Road, Q Road, S Road, T Road, U Road, V Road, W Road, X Road, Y Road, and those on Branch County Road and State Route 92 that face on said state and county roads.

Listing in the National Register, the Federal government's official list of historic properties worthy of preservation, results in the following for historic properties:

1. Consideration in planning for Federal, Federally licensed, and Federally assisted projects. The Advisory Council on Historic Preservation must be given an opportunity to comment on all federally related projects affecting listed properties. For further information see 36 CFR 600.
2. Eligibility for Federal tax provisions. The Federal Internal Revenue Code encourages the preservation of depreciable historic structures by allowing favorable tax treatments for rehabilitation and also provides for charitable contributions for conservation purposes of partial interests in historically important land areas or structures. For further information see 36 CFR 67.
3. Consideration of historic value in the decision by the State or Federal government to issue a surface coal mining permit where coal is located. For further information see 30 CFR 70 et seq.
4. Eligibility for Federal grants-in-aid, whenever funds are appropriated by Congress. For further information contact William G. Farrar, Deputy State Historic Preservation Officer.

Owners of private property nominated to the National Register may concur in or object to the nomination in accord with 36 CFR 60. Any owner or partial owner who objects to listing should submit a notarized statement (certifying ownership and objection to listing) to William G. Farrar, Deputy State Historic Preservation Officer, Department of Culture and History, The Cultural Center, Capitol Complex, Charleston, West Virginia 25305, by July 7, 1988.

Each owner or partial owner has one vote, regardless of how many whole or partial properties in the district are owned by that property. If a majority of private property owners object to the nomination, it will not be listed; however, the State Historic Preservation Officer shall submit the nomination to the Keeper of the National Register for a determination of eligibility for inclusion in the National Register. If the property is determined eligible but not formally listed, the Advisory Council must still be given an opportunity to comment on Federal projects which may affect the district.

A copy of the nomination, the criteria used for evaluation, and more information on the results of listing are available from the West Virginia State Historic Preservation Office, at the above address or telephone inquiries can be made at 304/348-0240. Comments on the nomination should be received by the WVSHPO before the State Review Board Meeting, July 7, 1988.

NATIONAL REGISTER NOMINATION
COMMENT AND RECOMMENDATION SHEET

NAME: Arthurdale Historic District

LOCATION: Arthurdale, Preston County

*summary paragraphs
7-8*

PROPERTY OWNER: Multiple Ownership

NOMINATION PREPARED BY: Dr. Barbara J. Howe, et al, West Virginia University

NOMINATION SUBMITTED BY: WVU Public History Option

STAFF COMMENTS: The nomination represents a massive research and inventory project carried out by WVU professionals and students, in cooperation with Arthurdale Heritage Inc.

Arthurdale, currently undergoing restoration, was the first of the nearly 100 New Deal communities founded during the Roosevelt administration.

STAFF RECOMMENDATIONS: Staff recommends approval of nomination.

Arthurdale may be eligible for National Historic Landmark designation.

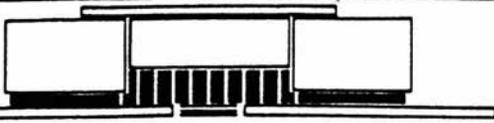

Staff will work with the preparers to insure that counts of noncontributing and contributing resources are exact.

Several blanks, e.g., "exceptions to criteria" will be filled in.

Dear Commission Members:

We are pleased to inform you that the West Virginia State Review Board has approved the Arthurdale Historic District, Preston County, for nomination to the National Register of Historic Places.

Upon completion of editing and other preparation, the nomination will be sent to the Federal Agency for review; we anticipate a three to six month waiting period before the site is entered on the National Register.

If you have any questions concerning this matter, please feel free to call.

Sincerely,

William G. Farrar, Deputy State Historic
Preservation Officer

Dear Ms. Shull:

We are submitting for your consideration the completed Inventory Nomination Form for the following historic district:

Arthurdale Historic District, Arthurdale, Preston County, W.V.

This resource has been approved by the State Review Board in accordance with regulations for inclusion in the National Register of Historic Places.

Interest in the nomination of the community to the National Register surfaced five years ago. Since that time, efforts in Arthurdale have focused on the preservation and restoration of the central administrative complex through Arthurdale Heritage, Inc. A community meeting held a year ago also brought people together to work toward preparation of the National Register nomination package. Statewide interest in Arthurdale is stimulated by these activities and by press and media attention that has extended beyond the State's borders.

It is the consensus of professional preservationists in West Virginia that development in Arthurdale over the past fifty years has not seriously damaged the integrity of the community. This would not usually be the case in a town with confined street grids and typical development patterns. Arthurdale, however, is a rural settlement within which new construction has occurred within ample spaces; the affect this has had upon historic resources has not, in our opinion, been substantial.

Should you have any questions or need of additional information, please feel free to call us.

Sincerely,

William G. Farrar

Nomination Return Sheet

Arthurdale Historic District
Preston County, WV

The nomination form does not address the issue of integrity of the properties listed as contributing. In Section 10, page 1, it is noted that all properties constructed prior to 1947 are considered to be contributing. From the individual descriptions of properties in Section 7, it is apparent that the contributing category includes at least 14 properties that have 0% original building materials remaining, 14 buildings having only 25% original fabric, and a further 26 having only 50% original materials.

Date of construction alone is not sufficient to confer contributing status on a property; in addition to dating from the period of significance, properties must retain sufficient original building fabric to recall the defined period and areas of significance. Please reevaluate the categories of contributing properties and provide an analysis of integrity as it relates to alterations to the properties over time.

NOTICE

The Arthudale Historic District has been entered on the National Register of Historic Places listing on February 1, 1989. Properties within the boundaries of the proposed Arthurdal Historic District encompass the entirety of the originally delineated Arthurdal Subdivision of 1933, excepting that land now shown as a part of the West Virginia University Experimental Farm. Properties included within the proposed historic district include all properties within the community of Arthurdale that are assigned lot number facing the streets of A Road, B Road, C Road, BB Road, D Road, E Road, F Road, G Road, H Road, I Road, J Road, K Road, L Road, M Road, N Road, O Road, P Road, Q Road, S Road, T Road, U Road, V Road, W Road, X Road, Y Road, and those on Branch County Road and State Route 92 that face on said state and county roads. Listing in the National Register, the Federal government's official list of historic properties worthy of preservation, results in the following for historic properties:

1. Consideration in planning for Federal, Federally licensed, and Federally assisted projects. The Advisory Council on Historic Preservation must be given an opportunity to comment on all federally related projects affecting listed properties. For further information see 36 CFR 600.
2. Eligibility for Federal tax provisions. The Federal Internal Revenue Code encourages the preservation of depreciable historic structures by allowing favorable tax treatments for rehabilitation and also provides for charitable contributions for conservation purposes of partial interests in historically important land areas or structures. For further information see 36 CFR 67.
3. Consideration of historic value in the decision by the State or Federal government to issue a surface coal mining permit where coal is located. For further information see 30 CFR 70 et sec.
4. Eligibility for Federal grants-in-aid, whenever funds are appropriated by Congress. For further information contact William G. Farrar, Deputy State Historic Preservation Officer.

A copy of the nomination, the criteria used for evaluation, and more information on the results of listing are available from the West Virginia State Historic Preservation Office, at the above address or telephone inquiries can be made at 304/348-0240.

IN REPLY REFER TO:

H34 (418)

APR 29 1993

Honorable John D. Rockefeller, IV
United States Senate
Washington, DC 20510

Dear Senator Rockefeller:

Thank you for your letter of April 6, 1993, transmitting a letter from Ms. Deanna Hornyak, Secretary of the Board of Directors of Arthurdale Heritage, Inc., concerning the Board's request for consideration of the Arthurdale Historic District for National Historic Landmark designation. We have recently responded to a similar letter that Ms. Hornyak addressed to us.

I regret that I cannot be encouraging regarding the consideration of the Arthurdale Historic District for National Historic Landmark designation in the near future. After careful review of the proposed nomination study, we believe that the National Park System Advisory Board, which reviews all such studies, would not recommend the district's designation at this time.

The Arthurdale Historic District is one of some 100 communities included in the "homesteads" programs of the New Deal. This office has not conducted a National Historic Landmark theme study of the many communities associated with this and other New Deal housing programs and none of them have been designated National Historic Landmarks. Many of these communities have only recently attained the minimum age of 50 years that is the threshold normally required for consideration.

A study of these communities would require the examination of all to evaluate their relative importance and state of historic preservation. Besides Arthurdale, few have been listed in the National Register of Historic Places, severely limiting access to comparable material on their current condition.

Congressional mandates to perform National Historic Landmark theme studies of other subjects have presented us with a heavy workload. Among others, these include studies of American labor history, African American history, Japanese American internment, and the Underground Railroad. These circumstances effectively prevent us from scheduling any additional studies of similar complexity until these are addressed, for we would need to divert staff and funds from these mandated studies.

Only if a property were of such self-evident importance that it was clearly head and shoulders above other examples would it be reasonable to present it individually. In that regard, the claim that Arthurdale is of exceptional importance because it was the first of the homestead communities is not highly persuasive, because all were built within a fairly narrow span of time. Review of the Arthurdale nomination also raises doubts as to whether the district, based on its state of preservation, qualifies for Landmark designation as currently proposed. Infill with more recent buildings appears to have been extensive. Many original buildings have been modified. These issues must be taken into account because of the high standard of historic integrity or state of preservation required for Landmark designation.

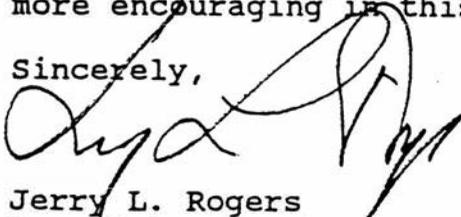

The nomination also excludes an area that is within a university's jurisdiction, apparently for the administrative convenience of the university. This exclusion is not reasonable from an historical perspective; this area should be considered for inclusion.

In summary, then, we have concluded that much additional work on the nomination report is required, as well as full consideration of the place of Arthurdale among all those communities that date from the same period and possess similar historical associations. In the absence of resources to conduct full staff reviews of these issues, we must regretfully defer any additional action on this study, for we believe that its presentation to the Advisory Board in its current form would result in an indefinite deferral, pending the revision of the form and the completion of a study of all similar properties.

Please be assured, however, that, by virtue of its listing in the National Register of Historic Places in recognition of its significance in State and local history, the Arthurdale Historic District is subject to key benefits and protections of Federal historic preservation law. These are cited in enclosures, which describe the National Historic Landmark and National Register programs in detail.

We appreciate your interest and that of your constituents in the National Historic Landmarks Survey and regret that we cannot be more encouraging in this instance.

Sincerely,

Jerry L. Rogers
Associate Director,
Cultural Resources
