#### DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

The Carstens Farmstead is situated  $l\frac{1}{2}$  miles south of the 1-80 interchange at Shelby. The farm consists of 80 acres of mostly loess-derived soils under the influence of prairie vegetation, about 70 of which are being tilled. The landscape is gently rolling, and the farm structures are grouped together in a wooded area in the northwest portion of the property.

The farmstead contains an interesting collection of structures, including two houses, several barns, granaries, machine sheds, and an assortment of miscellaneous sheds. The barns and granaries are in the best condition, while the rest stand in various stages of abandonment and deterioration. All are of wood construction. Most have simple front-gable roofs (with ventilating cupolas on the barns and granaries), and exteriors are sheathed with board and batten, simple vertical, or horizontal siding. A few structures are covered with galvanized metal sheeting. The structures vary in size, according to their uses, with the barns being the largest. Smallest of the identifiable structures is the outhouse.

Although the structures vary in age and use, they are generally located on the farmstead with a certain practical logic. Nearest the county road is the "living complex" of farmhouse (with attached summer kitchen), outhouse, and a cob house (most likely once used to store cobs for fuel), with the garage a short distance away. Near the garage is the oldest barn (1886), with horse stalls and milking stanchions, and beyond the barn are a corncrib and granary. All these structures, located in the north and west portions of the farmstead, appear directly related to the comfort, food and transportation needs of the farmer.

The structures toward the southeast corner of the farmstead are principally related to production. They include two beef cattle barns and a hog house. Their location (particularly that of the hog house) with relation to the farmhouse is no accident: prevailing winds here are from the northwest. Other structures in this area are a windmill, forge and workshop, feed shed and granary: all support services for animal production.

The three barns are quite similar, with the two beef barns (1903 and 1917) nearly identical. The barns are appropriately oriented against the weather, with their hay hoods on the south side.

List of Structures and Dates of Construction:

(With the exception of the first farmhouse, structures are listed in a generally clockwise direction from the present farmhouse. Information on building dates obtained in interview, October 1975, between L.J. Soike of SHPO and Henry Carstens (deceased).)

- 1. Original farmhouse (1872), believed moved from original location, which was probably where the present farmhouse stands.
- 2. Farmhouse (1888) with
- 3. Summer kitchen, which may have been built at the same time as the first farmhouse.
- 4. Cob house (1926).

STATEMENT OF SIGNIFICANCE

lowa's past development rests upon her agricultural growth, and, since the family farm has largely made it so, it is fitting that certain representative farms across the state be nominated that convey a sense of lowa's earlier agricultural patterns. Because the face of individual farmsteads is so quickly changing, however, as advancing farm mechanization is rendering most older buildings obsolete, we are fortunate when a farmstead appears such as the one once owned by the Carstens family. It is of importance because it exhibits hardly a trace of the post-World War II specialized, large-scale, heavily-mechanized operations that have left so few lowa farmsteads untouched. Nearly all of the buildings ever erected on the Carstens farm are still standing, and ownership in the hands of the Pottawattamie County historical society increases the likelihood that their integrity will remain uncompromised in the future.

Western lowa's livestock region is a less humid agricultural area where beef production surpassed hog production, and its farmsteads have reflected these tendencies. Indicative of the pattern, the Carstens constructed a total of three barns, and two of them were devoted to beef raising. Also, the absence of a silo typifies the western lowa pattern where farmers found greater success in producing alfalfa hay than in growing corn cut for silage to meet their forage needs. In addition to similarities in the kind and use of buildings, the Carstens' farmstead exemplifies the prevailing regional patterns in the relatively recent origin, modest size and standard wood frame construction of its buildings.

The history of this German immigrant farmstead dates back to 1871 when Johan Carstens, after having spent eight years in America at the mason's trade in Milwaukee, Chicago and Davenport, pushed farther west to begin a new venture in farming. He purchased 160 acres of Pottawattamie County land from the Chicago, Rock Island and Pacific Railraod and farmed themafter intil 1905 when he and his wife retired to the nearby town of Shelby. Others of the family continued ownership of the farm until 1977. At that time Henry Carstens, Jr. donated the remaining 80 acres of the family farm to the county historical society, in the hope that it will become a witness to changes that farming has gone through from "horse farming to motor farming". Nomination of the farmstead will move this hope one step closer to being realized.
