DESCRIBE THE PRESENT AND ORIGINAL (if known) PHYSICAL APPEARANCE

Today, though the fort is in ruins, a number of its walls stand to a height of eight feet or more, and one or two of the old buildings could well be restored. Some of the original layout has been obscured, but excavation and measurement should clear up any question of identity of the surviving elements. With professional analysis and partial restoration, Fort Selden should make an excellent focus for the State Park that will surround it.

When it was built of adobe and stone, Fort Selden consisted of between fifteen and twenty buildings, and in typical military style was situated around a parade ground. Directly enclosing this ground were the enlisted men's one-story barracks with quarters for 200 men, a one-story hospital containing two wards, the officers' quarters composed of three connected units, the long one-story headquarters building, and the two-story guardhouse built of stone. Other buildings included a shop and wash house, a bakery, school, non-commissioned officers' quarters, a sutler's building, corrals, woodyard, granary, the commanding officer's quarters, and, slightly removed from all the rest, an ammunition magazine. To the northeast lay a cemetery.

Fort Selden, although originally established in May, 1865, was not officially declared a United States fort until 1870.Located near the south end of the Jornada del Muerto, the fort was situated in a fairly inhabitable spot about one and one-half miles from the river. At that time, the nearest civilian population was at Dona Ana, about twelve miles away, and it was for the safety of small, young settlements such as this one, as well as for the safeguarding of the post road, that the fort was established. Apache threats in the southern part of New Mexico were a continual source of anxiety to the scattered settlers who were beginning to populate the area.

Although there were weekly stages from Santa Fe and Mesilla, the fort's original supply station was 350 miles north at Fort Union, and the nearest railroad point was 650 miles away at Carson, Colorado. These isolating conditions were somewhat offset by the good climate and the nearby hot springs, and the troops stationed at Fort Selden did play host to occasional travelers and haulers, the latter including drivers of the six mule team wagons that carried mail up from El Paso. In the early 1880's, a heliograph was set up on nearby Monte Robledo so that the fort could communicate quickly with Cook's Peak, Mount Franklin, Fort Stanton, and Fort Bliss. It was expected that by this means settlers could be warned of the presence of hostile Indians.

In 1881, the fort was brought into closer touch with civilization when the first train passed by on tracks laid along the riverside. However, despite such progress as the nearby railroad, and such hindrances as the hostilities of the Indians, Fort Selden's existence was by no means considered crucial by the army. In fact, as early as the years 1875-77 plans were made to withdraw the troops at Selden and abandon it. Only the apprehensiveness of the area's citizens seems to have kept these plans from being realized immediately, and even this was not an overly strong deterrent, since from 1879-80, the fort was indeed abandoned temporarily, and reactivated only because of a rash of Indian troubles in which the Apache chief, Geronimo, played a prominent role. At attempt was then made by the (cont'd)

8. Significance (continued)

United States Congress to enlarge Selden and give it a more important status, but the War Department did not concur, and the measure which had proposed Fort Selden as the central military establishment of the region failed.

For a while, beginning in 1884, the fort's life and appearance, if not its importance, did pick up considerably, and indeed it became a model for all frontier forts. The new commandant, Capt. Arthur MacArthur, father of General Douglas MacArthur, spruced up buildings, organized recreational activities, created a reading room, and expanded the complement of troops to ten companies.When he left with his family for another assignment, the area's settlers turned out to bid him farewell, for he had been highly popular, not only with his troops, but with the local citizens as well.

The Executive Order to abandon Fort Selden was signed by President Benjamin Harrison in 1890, but the last troops were not withdrawn until 1892, when the property was transferred to the Department of the Interior.

Although the fort never figured in any major battles, its significance is nevertheless strong simply because it was a frontier post. These military outposts of the expanding United States were of undeniable importance in securing the peace of the still untamed west, and they stand in testimony to the hardships of 19th century pioneer efforts. The relatively good condition of Fort Selden's remains makes it an excellent memorial to the period of American settlement in the southwest.
