DESCRIBE THE PRESENT AND ORIGINAL (if known) PHYSICAL APPEARANCE

The Arnold-Palmer house, a handsome brick single residence of the Federal period, was built about 1826 by Daniel Arnold, a wealthy Providence merchant. The house has been stylistically attributed to John Holden Greene, Providence architect, who designed St. John's Cathedral, the First Unitarian Church, the important Sullivan Dorr house and a number of other dwellings. On its original location at 577 Westminster Street, the Arnold-Palmer house completed a series of four similar houses, all of which Norman M. Isham attributed to Greene. This is the only house of that group still extant.

The brick house, with its cubical mass, its five-bay width, its hip roof with monitor, and its four tall exterior chimneys symmetrically placed, is very close in appearance to the Truman Beckwith house which Greene is known to have designed (in the College Hill Historic District) about 1825. The walls are of pressed brick with thin bands of darkened mortar and rest on a rebuilt granite foundation. They are pierced by six-over-six double-hung sash windows with plain brownstone lintels and sills; the original exterior shutters are missing. Like the Beckwith house and other local residences by Greene, the structure is capped by a hip roof with monitor. The wide, elegant main cornice is embellished by a series of balls strung on a straight rod, and it is visually joined to the wall by carved wooden guttae directly applied to the brick surface. Such a design for the main cornice shows an innovative use of Asher Benjamin's publications by the architect. The original balustrades crowning the roof and monitor, which are now missing, were composed of simple wooden panels inserted above plain surfaces between rows of turned balusters above wall openings.

The primary decorative feature of the exterior is the central front entrance, treated as a unit with the central window on the second floor. The heavy, six-panel door, with a semi-elliptical fanlight and sidelights, is encased by a banded, Gothic-colonnette jamb moulding which is carried over the fanlight, another characteristic of Greene's work of the period. The entrance is sheltered by a one-story shallow portico supported on slender, unfluted double columns with Ionic capitals; it is capped by a low balustrade. A wrought iron railing runs around the granite base and down stairs at either side. The central second-story window above had been extensively remodelled and was replaced in 1968 by a window salvaged from Greene's Easton house in Pawtucket, Rhode Island, a house very similar in date, scale, and style. It is tripartite and generally of Palladian inspiration, but a semi-elliptical, leaded fanlight spans the entire width. As in the Beckwith house, the design of this window virtually repeats that of the entrance below.

Considering the multiple uses through which the house has been put as its neighborhood became commercialized and deteriorated, the interior is in a remarkably fine state of preservation. As in other John Holden Greene houses, this interior is characterized by a broad simplicity of

7. Description.

detail, the chief architectural feature a beautiful, delicately ornamented, curving staircase. The staircase rises along one side of the central hallway, sharply curving at the top into the second-story hall. The attenuated square baluster sticks support a slender moulded handrail which winds into the newel at the base of the stairs. The riser end of the stairs are decorated with intricate Adam fan details, similar to those in Greene's Sullivan Dorr house on Benefit Street.

The four principal rooms on the first story retain their original dimensions. While the exterior fireplaces in the rear rooms remain closed, those in the front rooms were opened in 1968 and decorated with mantels from the Easton house. The rather high mantel shelves are supported on simple Doric columns; block panels decorate the frieze. They are correct in style and scale for this house and must closely resemble the originals. Other interior detailing is sparse, except for the floor-length panelling of the splayed window reveals which still contain the original interior shutters. The fine plaster cornices of these rooms are still intact.

Original detail remains on the second story, although these rooms have been partitioned and somewhat remodelled to accommodate offices. A third fireplace from the Easton house has been installed on this floor and is similar in design to those of the first story; this one is executed in beautiful white and dark gray marble. Several magnificent Victorian gilt chandeliers now hang in these rooms. The third story has been remodelled as an apartment, and the new foundation allows for rest-rooms and a large finished hall in the basement.

STATEMENT OF SIGNIFICANCE

The Arnold-Palmer house is an excellent example of late Federal architecture of the highest quality; it has been well preserved and partially restored. The fanlighted entrance, with portico, and the curving interior staircase are superb features. Details--such as the elaborate exterior cornice, the carved riser ends of the main staircase, and the fine mantels that were salvaged from another of John Holden Greene's works--are of high quality and display that architect's skill. The structure is marked by outstanding builders' workmanship throughout.

This house has, today, great significance in the Weybosset Hill area of downtown Providence. In the early 19th century Weybosset Hill was the most important commercial and residential section of Providence, and the Arnold-Palmer house was typical of the fine homes being erected there. Gradual commercialization and near-slum conditions, and more recent urban renewal have destroyed this historic area. Slated for demolition, the house was purchased by Beneficent Congregational Church and moved down the hill onto church property in 1967, with the aid of a U. S. Housing and Urban Development grant. The Arnold-Palmer house thus remains a sole example of the Weybosset area's residential architecture in its finest period. In its present location it helps to maintain the integrity of Beneficent Congregational Church, an historically and architecturally significant structure in its own right, and its immediate surroundings--which, fortunately, that church owns also.
