Handwritten text in a cursive script, likely a list or index of names and locations. The text is arranged in two rows. The first row contains several entries, and the second row contains more entries, some of which appear to be names of places or institutions. The handwriting is somewhat faded and difficult to read precisely.

The following table shows the results of the experiment conducted on the 15th of June 1904. The data is presented in two rows of numbers, likely representing different trials or conditions. The numbers are arranged in a sequence that suggests a comparison between two groups of measurements.
