The Rockville Station is a nineteenth century Victorian picturesque structure with some Eastlake detailing, particularly in the roofline and gable decoration. The building is of red brick with a gabled central bay and board-and-batten dormered logitudinal wings. The pointed arch windows of the first floor facade have verigated stone voussoir block surrounds, while the architraves of the dormer windows are painted a rust-color. Continous light-colored courses run below the sills of the ground floor windows; a brickwork decorative motif runs across the facade in the central gable.

The end walls of the wings are brick and have pointed arched windows with verigated voussoir blocks both on the groud floor level and in the gable. The gable end is hipped, with an arched bracket support under the eaves. Light colored courses run beneath the sills of the ground floor and the gable windows.

The rear facade is more functionally austere, with a wing at right angles to the main body of the building decoratively marked only by a dormer window, with the dormer breaking into the eaves of the building.

The roof is covered with slate tiles laid in verigated light and dark bands. The body of the building is red brick and the woodwork is painted fawn with rust trim.

STATEMENT OF SIGNIFICANCE

The Rockville B & O Station is one of the few survivors of the many picturesque county stations built along the tracks of the B & O and other 19th century American railroads. Unlike most surviving stations, the exterior character of the Rockville station remains unmarred by unsympathetic additions or painting.

The construction of the Rockville station as part of the development of the Metropolitan Branch of the Baltimore and Ohio Railroad was an important factor in the growth of the City of Rockville. The population of Rockville in 1873, the year the station opened was 670 persons. By 1890, the population had increased to 1,500, primarily because of the City's easy access to Washington via train. The coming of the station area so as to make Rockville a more attractive stopping off point for passengers desiring hotel accommodations. Because of cheap, efficient transportation (a trip from Washington cost 60 cents and took 45 minutes), Rockville soon began to enjoy some popularity as a summer resort. Local hotels prevailed upon City dwellers in Washington to enjoy the cool shade of the country with its health-giving mosquito- and malaria-free air. and weekend visitors stepped off the train into horse-drawn carriages to be deposited at one of three grand hotels. Hotel proprietors boasted the presence of many of Washington's elite. Residential lots in the area known as "West End Park" were vigorously promoted by developers because of access to the railroad. Rockville's size and population expanded around the resort trade and purchasers of subdivision lots. Rockville also served as the transfer point for passengers going to Sandy Spring, Olney and Brookeville, who would complete their journey by "private conveyances."

The station and its freight sidings have had a continued influence on the development of Rockville, particularly along the Right-of-Way. At least one "long time" Rockville business, Wire Hardware and Lumber Company, which has been in business since the late 19th century, was opened as a direct result of the location of the railroad station. The Sentinel in 1873 reported that residential development began on Baltimore Road adjacent to the station shortly after the tracks were completed.

The Rockville station was the model for the Atlas model train company's passenger station (#706-300) in HO scale, first made in the early 1960's.

RECEIVED

DATE ENTERED

Immediately to the north of Rockville Railroad Station and included within the one acre boundary is the auxiliary building, a one storey brick structure used as a warehouse, oriented, as the Station is, toward the railroad tracks. The building has a jerkinhead roof echoing the form of the station with an eyebrow window in the east and west faces of the roof. The roof is supported by brackets and extends out from the east wall.

The auxiliary building has no windows. A double door exists in the east elevation.
