DESCRIBE THE PRESENT AND ORIGINAL (if known) PHYSICAL APPEARANCE

The L. S. Ayres Annex Warehouse is a brick building, with brick, cast-iron, stone, and sheet-metal trim. It is rectangular in shape, with a 72'6" frontage on Maryland Street, and a depth of 49'6" extending toward the main L. S. Ayres Department Store in the block behind, fronting on Washington Street. The Annex, located in an urban area, is connected on the east to a six story building, defined on the west by a parking lot, and on the north by Pearl Street.

The brick walls of the Annex are painted medium gray, as is its sheet metal work at the roofline. The second and third story window surrounds are of white stone or painted white. The entrance and display arches on the main floor are of cast iron, painted black.

The main floor is higher than the second floor, which, in turn, with its semi-circular arched windows appears to be slightly higher than the third story, whose windows have stilted segmental arches.

The entire face of the building is marked off vertically by flat-faced, incised, cast-iron or brick pilasters into three sections--a central group of five bays, with flanking groups of two bays each. Within the ground-floor bays are cast-iron Corinthianesque columns supporting elaborately ornamented and incised stilted arches beneath a plain metal architrave painted black, and a plain metal spandrel beam painted white. It would appear that there was at one time a decorative awning fastened to the spandrel beam, which has since been removed. The spandrel beam doubles as a continuous sill for the second story windows, as can be seen from viewing it from the under side. At the third floor level the window sills with their supporting wedge-shaped brackets and their stilted segmental window arches are of stone.

The white-painted pilasters which rise throughout the height of the building are of incised metal, through the ground floor level, but of simple painted brick through the second and third stories, up to the diminutive capital which is of brick and stone. Where they continue above the third floor windows, the frieze (or horizontal band), the cornice, and the blocking course (or parapet), are of sheet metal, painted white. Continuing the verticality of the pilasters, sheet metal brackets project slightly in front of the frieze, cornice, and blocking course, thereby carrying the verticals of the pilaster-piers through the entire facade of the building, until they terminate in stylized, anthemion-patterned ornaments which punctuate the skyline.

STATEMENT OF SIGNIFICANCE

The facade of the L. S. Ayres Warehouse is in a good state of preservation, and its rich expression of brick, stone, cast iron, and sheet metal provides an excellent example of a late 19th century commercial building in a style designated by Marcus Whiffen as High Victorian Italianate.

Elliott's Block, as the building was originally called, was built in 1875 for Calvin A. Elliott, who was engaged in the wholesale liquor business. While it is quite likely, it is not known if the building was used in connection with the liquor business. The ground level appears to have contained shops, and the upper levels appear to have been loft space.

In 1880 Daniel Stewart and Thomas G. Barry bought the building and used it as a glass warehouse. Stewart had been in the retail and wholesale drug and glass business, a combination customary for the times, which was the forerunner of the present Stewart-Carey Corporation Corporations in Indianapolis, manufacturers of glass and building materials.
