DESCRIBE THE PRESENT AND ORIGINAL (if known) PHYSICAL APPEARANCE

The Nelson Pioneer House and Barn are in their original rural setting on a 350 acres rolling, partially wooded, area. Thirteen of the 350 acres belong to the Mahaska County Museum complex. The Nelson house and barn, stand unaltered among an assortment of other relocated buildings and later constructions whose presence doesn't altogether intrude upon the harmonious interaction of the original buildings. Both the house and barn building are in the remarkable condition for their age and are also fine examples of established building styles and techniques.

The Nelson house, facing the south side of the nearby barn, was built in 1853! It is a typical two story rectangular brick building, with a finely laid block stone foundation, regularly placed windows, simple dressed stone window headings and a low-slowing gable roof. The wood porches on the front and rear are later (1898-1900) additions. Interesting to note is the extensive use of glass (much of which is original), the brick dentilation under the north side eaves, four well-preserved chimneys and the thick (14") masonry walls of local brick. There are no windows on either the west or the east side so as to protect the interior from strong prairie winds. The interior woodwork (wainscoting, chair rails, door frames, window frames and cabinets) is a combination of walnut, elm, oak, butternut and linden, all obtained locally and prepared in the Nelson's own saw mill. Built-in cupboards and closets appear on either side of the fireplaces on the ground floor. The kitchen, living room and two bedrooms upstairs are all of equal size and flank the central stair and hallway.

Minor departures from the original farm house include the green asphalt roof covering, the absence of the metal downspouts, the painting of the windows headings (grey). The building, now a house museum, was restored in 1964-1965, however, no alterations or additions to the fabric of the original design were made.

The Nelson Barn is remarkable due to its enormous size and its extensive use of glazing. Measuring 61 x 46, the barn was actually used more for the storage of grain (as a granary) than for the shelter of farm animals. The size was determined by the convenient location of four oak trees which serve as the corner posts. The rest of the building is of board and batten construction, also from oak lumber milled right on the site. rectangular plan and low-sloping gable roof complement the plan and scale of the smaller but equally classically designed Nelson house. building rests on a foundation of stone gathered from the Skunk River. On the interior, lofts appeared only on the west side. Since the building now serves as a farm implement museum, lofts of like design were added to the east side as well. Even wooden pegs were used for this modeful 7 addition. Some timber was repaired or replaced in 1945 after storm. Photographs show, however, that this building remains much as it the the nineteenth century. In addition, speculations are that the building was not only a granary but also a distillery.

Three outbuildings (dates of construction unknown) directly to the Tsouth of the Nelson House are also included in this nomination. TheseRaceSthe summer kitchen, woodshed and small outdoor privy or "convenience." The

7. Description Continued

summer kitchen, a square clapboard building with gable roof, central entry, three windows, a rear-center brick chimney and new wood shingles, was cleaned and repainted in 1964. The woodshed, in slightly more deteriorated condition, is slightly larger with veritcal siding (installed with old lumber found on the farm in 1964) and has been converted into an exhibit room for demonstrating meat processing. Although these buildings present varying degrees of authenticity in terms of their exterior and interior appearance, it is thought that they contribute essential elements to the complex of the Nelson Farm as a whole. None of the buildings is so far removed from its original condition that it misrepresents the image of the nineteenth century farm. Indeed, without them, the setting would appear to be quite deprived.

Buildings that are not included in this nomination but that appear on the original 350 acre plot and that are visible when standing near the Nelson House or Barn are: a relocated clapboard, one room schoolhouse, the Prine Schoolhouse, built in 1861; a relocated 1867 log cabin; a modern (1960's) concrete block museum exhibit building whose plan resembles that of the gable roofed barn; a false fronted clapboard store building; and finally, a small pagoda-like ticket booth placed at the entrance of the farm museum complex. Of all the buildings relocated or constructed on the original farm property, only the museum exhibit building could be regarded as an offensive intrusion. However, its plan, if not its materials, does correspond to those of the house and barn and its use could be considered an essential part of the interpretive process for a good understanding of early Iowa farm life.
