No. 8. Significance

Fairchild Winery

spring, hired a stone mason to rebuild the front wall. Though running water and electricity have been added, the structure remains much as it was when completed in 1893, a fine example of stone masonry -- using the ancient (though rare to Oklahoma) wedged mass principle -- and one of the oldest, essentially unaltered, man-made structures in Oklahoma City.

With an informal rock patio at the entrance, the restored winery now serves as a meeting place for heritage-minded civic, historical, and social groups. It is also included on certain conducted tours. In time it is anticipated the property will be turned over to the Oklahoma Historical Society.

For his wine vault Fairchild chose a spring-fed site on the slope of a shallow draw near the center of his claim. Out of solid rock he chiseled the floor of the 14 x 41-foot structure. Just inside the four walls he had cut an additional foot-deep trench through which cold water was circulated from the spring house beside the arched doorway.

Reddish sandstone, believed to have come from a quarry near Guthrie, was used to build up the side walls to a height of about five feet. Then an extremely shallow arched stone roof was thrown over the half-subterranean vault and covered with dirt. (The dirt on the roof, of course, as well as that packed against the side walls, made construction possible, according to the wedged mass principle familiar to European builders since medieval times, and helped preserve the vault essentially intact down to the present.) Three ceiling vents took care of ventilation. A massive oak door completed the structure and provided protection for the winery's wooden aging vats.

Though wine production ceased in <u>1906</u> and the vault was unused and neglected for the next 65 years, it suffered surprisingly little permanent damage. The door disappeared. The spring became clogged. The interior was flooded with several feet of muck and slime and the entrance became obscured by trees and shrubs. However, the structure remained basically sound. Only a few stones were toppled from the front wall. The present owner hired a stone mason to rebuild the wall, following pictures of the vault when it was still in use (see enclosures). He cleaned out the silt, restored the spring, built an informal rock patio at the entrance. Though running water and electricity have been added, the vault remains today much as it was when completed in 1893.

STATEMENT OF SIGNIFICANCE			

Oklahoma hardly ranks with California and New York as a wine producing state. Today, so far as official licenses are concerned, it boasts but one commercial practicioner of the cenological art. And his is an extremely modest enterprise. Somewhat more ambitious was Oklahoma's first winery. Significant because of this "first" status (so far as is known), it is also noteworthy as an excellently preserved example of the wedged mass principle of the arch and, quite possibly, as the oldest structure within the city limits of Oklahoma City maintaining its original configuration and design.

Edward B. Fairchild was an Englishman who came to Oklahoma Territory from New York to take part in the "run" for land in 1889. He homesteaded a quarter section on what is now the north side of Oklahoma City. Little is known about him before 1889, or after 1907, when he sold out and apparently left the state. But he understood wine making and seems to have been determined to make the newly opened territory a wine producer. He planted much of his land in vineyards and contracted with neighbors so that at one time his winery drew on some 200 acres of grapes.

Fairchild is believed to have completed his vault in 1893. By 1900 he was producing about 5,000 gallons of wine a year. The quality is reported to have been quite good and Fairchild's wine was well known in central Oklahoma Territory. A publication of the Oklahoma City Board of Trade about 1900 tells of the production and contains two photographs, one an exterior view, the other an interior. (They were helpful in the recent restoration.)

By 1906, however, it was apparent that Oklahoma would soon become a state ... and that the constitution of the new state would almost certainly contain a ban on all alcoholic beverages. Fair child began to curtail his operation. On Nov. 30, 1907, just two weeks after statehood, he sold his entire quarter section. After that the vault was little used.

But the vault itself remained essentially sound structurally down to the present. The current owner cleaned out the debris, restored the
