1. Name of Property

National Register of Historic Places Registration Form

This form is for use in nominating or requesting determinations for individual properties and districts. See instructions in *How to Complete the National Register of Historic Places Registration Form* (National Register Bulletin 16A). Complete each item by marking "x" in the appropriate box or by entering the information requested. If an item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, architectural classification, materials, and areas of significance, enter only categories and subcategories from the instructions. Place additional entries and narrative items on continuation sheets (NPS Form 10-900A). Use a typewriter, word processor, or computer, to complete all items.

National Register of Historic Places Continuation Sheet

Section 7 Page 1 Freiwald Barn, Alban Twp, Grant Co., South Dakota

Description

The Freiwald Barn is located at the northwest quarter of the northwest quarter of Section 4, Township 120 North, Range 47 West, Fifth Principal Meridian, Alban Township, Grant County, South Dakota. Section 4 happens to be located in the most northeastern corner of the township, and this property is located one mile west of the Minnesota State line. It is located approximately six miles east of Milbank, and approximately three miles south of Big Stone City.

The driveway enters from 148th Street, a township road which runs east/west, from the north. The house is on the immediate right as one enters the driveway, relatively close to the road. Though the house is old, dating back to an age older than the barn, the house has been altered and modernized with an addition and vinyl siding, and thus does not retain sufficient integrity to be listed on the National Register. It, and the other outbuildings which are on the property, are excluded from the boundaries of this nomination, which include only the barn and silo.

The barn, built circa 1910, is set back from the road a few hundred feet, to the left as one enters the driveway. It is oriented so that the gable ends face north/south. The roof appears to be clad with wood shake shingles. Two gabled square wood frame ventilators sit on the top of the gable peak of the roof. The silo sits outside next to the barn on the south gable end. There is an animal enclosure on the east and south sides of the barn. The west and north sides are open to the visitor.

As one approaches the barn, it is obvious that the building was constructed on a flat surface with the poured concrete foundation exposed. However, for access to the upper hay mow, an earthen ramp was constructed, bringing in soil so that trucks and wagons could approach the upper loft. The lower areas are reached through doors in the gable ends, and doors on the east, shed side of the barn. The gabled roof slants down further on the east side, giving the barn a lopsided, "saltbox" shape when viewing it from the gable ends.

The upper part of the barn was constructed with a joist frame, which means that the frame was made out of milled lumber sections that construct the interior so that the center would remain open, however, crossed lumber sections on the sides give the structure its stability (see diagram). This type of barn construction was an evolution from the earlier, heavy timber method that had been used for much of the 19th century in Europe and in the eastern part of the United States. Though others may have been using this construction method for opening the barn in the center, builder Joseph E. Wing of Ohio

Section 7 P	Page 2	Freiwald Barn, Alban	Twp, Grant	Co., South Dakota

popularized it in the early 1890s when he published diagrams of his framing method in the *Ohio Farmer* journal in 1898.¹

The lower section of the barn was set up for dairy milking. There remain today 15 stanchions for dairy cattle, as well as troughs and gutters that are typical on the floor of dairy barns. The shed section on the east side of the barn is split into pens for holding animals. The east end exhibits a central sliding door, with four small windows on either side of the central door. A small gabled dormer punctuates the lower edge of the gabled roof just above the central door.

Outside of the barn, on the south side, is an unusual vertical wood stave silo, also built circa 1910. The staves are held together on the exterior by 11 horizontal bands of thick wire. The top of the silo is capped with a metal conical shaped roof. An exterior ladder on the north side of the silo allows one to climb to the top to look inside. The silo is set to the east of the gable end of the barn.

The barn is currently used for storage in the upper haymow area, and for animal shelter (the Freiwalds keep donkeys) in the lower section. The silo is no longer used. Both the barn and its accompanying silo are considered to be contributing to this nomination.

The barn is in excellent repair, and retains a high degree of physical integrity, despite its age of nearly 100 years old. Its asymmetrical roof shape, unusual framing system, and very rare wood stave silo make the Herman Freiwald Barn and important relic of a livelihood in Grant County that is rapidly changing and disappearing.

Statement of Significance

The Herman Freiwald Barn and silo, built in circa 1910, are locally eligible for the National Register of Historic Places under Criterion C as they embody distinctive characteristics of a particular method of construction. The barn uses a joist timber frame, which was popularized in the late 1890s. The silo, built of vertical wood staves and banded together with multiple horizontal vertical bands, is a rare existing example of this type. The farm has remained in the Freiwald family since they first acquired it in 1899. Both barn and silo retain a high degree of physical integrity and both help tell the story of early 20th century agricultural engineering in rural Grant County, South Dakota.

Background

Grant County, South Dakota was founded in 1878. The part of the county that saw development soonest was Big Stone Lake, and as early as 1880, tracks for the western extension of the Hastings and Dakota Division of the Chicago, Milwaukee and, St. Paul Railroad made their way from Ortonville, Minnesota into Big Stone City. Shortly thereafter, the tracks made it to Milbank. The "Great Dakota Boom" years between 1878 and 1883 were being lived in Grant County. Inexpensive, available land drew settlers, both Yankee and foreign born, to this fertile county. Abundant rainfall in the 1880s kept people coming, thinking this is how it always was in Dakota Territory.²

The Freiwalds

The Freiwalds, a family of German heritage who settled in northeastern South Dakota in Alban Township, Grant County, chose farms adjacent to one another. The land that became the Freiwald farms had been, in the early 1890s, part of a much larger land that was known as the Valley Land and Irrigation Company, owned by Edgar J. Miller. The Valley Land and Irrigation Company sold the land in 1897 to John T. Gold, a wealthy entrepreneur from Big Stone City, approximately six miles to the north of the farm. Then in 1899, John F. Gold and his wife Alice S. Gold sold the land to Herman Freiwald for \$2500, including approximately 206 acres in both Sections 4 and 5.

Freiwald Barn, Alban Twp, Grant Co., South Dakota

It was during Herman and Linna's ownership of the land that the barn and silo was built. The current owner, Crispin Freiwald, great grandson of Herman and Linna, remembers being told that the barn was built in about 1910. Though it is not known where Herman got the framing design of his barn, it is plausible that either he read about it in an agricultural journal, or he hired a local builder who was familiar with this framing technique. This technique looked somewhat like the heavy timber frame techniques that were historically popular in Europe and the eastern United States, however economized on the amount of lumber used in constructing the barn.⁴

Herman had died by 1943 and his widow, Linna, decided to quit claim the property to her son Ernest. Ernest continued to do dairy farming on the property, using newer dairy apparatus including cream separators and a vacuum pump milking system. In the 1950s, electricity finally came to the rural farm, helping the dairy operation run more efficiently. It was not until 1979 that running water was brought to the farm. Up until that date, a hand pump had still been used inside the house.⁵

Ernest Freiwald had sold the farm to his nephew Carl H. Freiwald, Jr. in 1978. Ernest died the following year, finalizing the transfer of property. Carl Jr.'s sisters Alfrieda, Mildred and Hilda all quit claimed their shares of the farm to Carl in September 1979. Carl and his wife Mariel continued to farm until they sold the property to their son, Crispin C. Freiwald in 1990 on contract deed. Crispin moved to the family farm at that time, and continues to live on the farm today, in 2007, with his wife Donna. The entire farm, today, includes 183 acres of land.⁶

The Barn and Silo

The Freiwald barn uses a specific interior frame type that was considered to be a transitional frame that was like the heavy timber style of barn building that was popular in the mid 1800s, but more conservative on its use of lumber. It appears to have been popularized by an Ohio farmer.

Section 8 Page 3

Freiwald Barn, Alban Twp, Grant Co., South Dakota

"In 1893, Joseph E. Wing had carpenters erect a new type of barn on his family farm in Champaign County, Ohio. Making posts and beams of dimension plank lumber, but creation the "joist-frame barn." His carpenters, unfamiliar with such a barn, had been "quite anxious for fear something would give way and the thing wreck itself." Wing was untroubled. His barn was soon accepting as much as one thousand pounds of hay in a single lift with the hay carrier. In the meantime, Wing began publicizing the merits of his joist-frame barn. While its substitution of spiked planks for heavy timbers saved time and money, its familiar resemblance to the older post-and-beam type of frame quickly attracted popularity.⁷"

The plank frame barns gained popularity in the late 1800s because they were less expensive to build than the earlier heavy timber barns. They were less expensive because they used less wood for constructing a barn that left the center open for loose hay storage, yet was as strong as its heavy timber predecessor was. In a terrain such as northeastern South Dakota, where large timbers were not common, a lighter frame construction method was even more critical.⁸

The wood stave silo is unusual, as well. Though silos were becoming commonly used in the late 19th century throughout the Midwest, particularly for dairy operations, they were commonly built out of more durable materials, including an early form of concrete. Because of the less durable material of wood, wood stave silos tend not to last decades. Thus, this silo is a rare remnant of a bygone era. Silos, in general, began to become popular throughout the Midwest by the 1890s, and specifically, wood silos gained some popularity by this time. However, in general, wood stave silos came to be replaced by the more durable and popular concrete silos by circa 1910.

The construction techniques of both the Freiwald barn and silo, though constructed toward the end of the period that these methods would have been widely popular, were nonetheless relatively short-lived, which make them somewhat rare. The barn and silo are thus locally eligible for the National Register of Historic Places under Criterion C for their distinctive construction techniques.

Section 10 Page 1

Freiwald Barn, Alban Twp, Grant Co., South Dakota

Verbal Boundary Description

The boundaries for the Freiwald Barn are made up of a rectangle extending 30 feet in each direction from the outside walls of the barn. The boundary includes the wood stave silo on the building's east side. The boundary excludes the house and other outbuildings of the Freiwald property. All of this is included in the northwest quarter of northwest quarter of Section 4, Town 120N, Range 47W, Alban Township, Grant County, South Dakota.

Boundary Justification

The boundary for the Freiwald Barn is intended to include only the barn and the wood stave silo that is on the south side of the barn. The house does not retain sufficient integrity to be considered eligible for the National Register, so the nomination includes only enough land around the barn to encompass all of the barn and its accompanying silo.

CORRECTION FOR PROPERTY NAME

This additional documentation corrects the property name in Section 1, from the "Herman Friewald Barn" to the "Herman Freiwald Barn". In the original nomination form, the property name in Section 1 was erroneously listed as "Friewald," transposing the "e" and the "i". The name was correctly spelled "Freiwald" throughout the remainder of the nomination. Owner Donna Freiwald brought this error to the attention of the South Dakota State Historic Preservation Office in an email dated January 2, 2014.

Edson H. Beall, Historian National Register of Historic Places Washington, D.C. Edson Beall@nps.gov

RE: Technical Correction- NRIS #08000045, Herman Freiwald Barn (48603 148th Street, Big Stone City vic., Grant County, South Dakota. Listed February 19, 2008.)

Dear Edson:

I am submitting a continuation sheet with additional information to make a correction to the property name in Section 1 of the National Register nomination for the Herman Freiwald Barn. This additional documentation corrects the property name in Section 1, from the "Herman Freiwald Barn" to the "Herman Freiwald Barn". In the original nomination form, the property name in Section 1 was erroneously listed as "Friewald," transposing the "e" and the "i". The name was correctly spelled "Freiwald" throughout the remainder of the nomination. Owner Donna Freiwald brought this error to the attention of the South Dakota State Historic Preservation Office in an email dated January 2, 2014.

We appreciate the correction being made to the nomination and on the National Register website. If you require a hard copy of this paperwork, please contact historic preservation specialist Jennifer Brosz (jennifer.brosz@state.sd.us) with the appropriate mailing address, and she will send it to you.

Sincerely,

Jay D. Vogt

State Historic Preservation Officer
