DESCRIBE THE PRESENT AND ORIGINAL (if known) PHYSICAL APPEARANCE

The Diamond Springs Stage Station archeological site is located in a pasture approximately one mile southwest of Brule, Nebraska. It is situated near the edge of a low flat terrace of the South Platte River and is about five feet above the River level. The southern limits of the site lie 70-100 feet north of the right-of-way of Interstate 80, which passes in an east-west direction. The Brule interchange of I-80 is about one mile to the east. The South Platte River is a quarter of a mile north of the site. The occupation area of the site appears to cover about four acres and is located slightly southeast of the center of the southeast quarter of Section 21, Township 13 North, Range 40 West.

Although all above-ground building remains have disappeared during the ca. 100 years that the Station has been abandoned, an unusual amount of surface detail has survived, due to the fact that the land occupied by the site has never been plowed. Disturbed soil at one location, covering an area roughly 85 by 30 feet, appears to mark the site where a large building or corral once stood. About 60 feet west of that feature is a shallow rectangular trench which is clearly visible. It encloses an area about 90 feet long by 60 feet wide. This may be the remains of a corral or similar enclosure. Several shallow depressions ranging in size up to about 20 feet across offer further evidence of former occupancy. Surface artifactual material, such as fragments of rusted tin and iron, pieces of broken window and bottle glass, and other small articles, is scattered about.

No archeological excavations have as yet been conducted at the site. It was believed that the recent construction of Interstate 80 through Keith County would destroy part or all of the station remains, necessitating highway salvage excavations prior to highway construction. But the final location chosen for the Interstate missed the site by a narrow margin.

Plowing of the pasture or any type of grading or land leveling at some future time would damage the site considerably and should be avoided if at all possible.

ATEMENT OF SIGNIFICANCE	<u> </u>	<del></del>	<del></del>

The Diamond Springs Stage Station site is of importance archeologically because of the relatively undisturbed remains present there of a station used by both the Pony Express and the Overland Stage during the mid 19th century.

This station was apparently built in 1859 by Russell, Majors and Waddell after that firm bought out Jones and Russell's Leavenworth and Pike's Peak Express Company. At that time, the Smoky Hill Route through Kansas was abandoned by the new owners in favor of the Central Route or Platte River trail, and 100 new stations were built. In 1860 the name of the company was changed to the Central Overland California and Pike's Peak Express, and the charter granted to it permitted the company to convey persons, mail, and property. A federal mail contract was not obtained at that time, however, because the government preferred the more southerly Butterfield route. The Pony Express, started by Russell, Majors and Waddell in 1860, did carry mail over the Central Route and, although its existence was short-lived because of the completion of the transcontinental telegraph line in 1861, it proved the worth of the Central Route to the government. Mail moved over the Central Route by stage beginning in 1861. The Diamond Springs Station appears on the official listing of stations used by the Pony Express during 1860-61. It apparently also served as a stage station both during the Pony Express period and for several years thereafter. After the demise of the Pony Express, the stage line operated by Russell, Majors and Waddell remained in business until March of 1862, when it was taken over by Ben Holladay in partial payment of loans made by him to Russell, Majors and Waddell.

In August of 1865, all stage stations between Julesburg and Cottonwood Springs were abandoned because of Indian depredations. Diamond Springs was among these stations. All property was left at the stations except livestock, which was hurriedly driven to either Julesburg or Cottonwood Springs. Losses sustained at Diamond Springs in feed alone were estimated at \$6,200. The stations were later remanned, but isolated minor incidents with the Indians still occurred. In August of 1866, a newspaper article reported that a number of Sioux called at Diamond Springs, a swing station of the Holladay overland route, "and levied some tax upon the keeper in the shape of pork, coffee and sugar and then departed in peace."

In the latter part of 1866, the Holladay Overland Mail and Express Company changed hands and became Wells, Fargo and Company. Stage travel along the

#### DIAMOND SPRINGS STAGE STATION

8. Platte valley diminished rapidly during the next two or three years because of the construction of the transcontinental railroad, which was extended to Nebraska's western border in 1867 and finally completed in 1869.

Because of the good preservation of the Diamond Springs Stage Station remains and their accessibility, the site is a good location to consider as a wayside stop for travelers on Interstate 80. With proper interpretation and possibly some restoration, it could become an attractive and meaningful spot to those interested in early western history.
